Sensors measure liquid height in a specified range, then transfer data to an external device such as a controller, indicator, PLC, or telemetry device. Great for inventory control or process monitoring. Easy to configure—without the need for an input card—using free WebCal software and included USB key fob. Narrow 2" or 3" mounting band allows use in tight spaces. Input: 24VDC (loop), except 12-24VDC/AC for 12U418 and 12-28VDC for 12U419. Type 6P enclosure. Corrosion-resistant PVDF (polyvinylidene fluoride) material with Viton gasket and polycarbonate enclosure. FM Approved for U.S. and Canada. CE Certified. RoHS compliant.

FLOWLINE

Multipoint Ultrasonic Level Switches

- Max. pressure: 30 psi
- Temp. range: -4° to 140°F
- Output: 4-20mA, 1 SPDT relay, 2 SPST (NO) relays

EchoSwitch general-purpose sensors provide continuous noncontact level detection up to 26.2 ft. (8m), with 3 programmable relays for level switch or control functions and 4-20mA signal output. The sensor is programmed by an integrated push-button display module. Each relay can be configured on a single set point (high or low level alarm) or latched on 2 set points for automatic fill/empty in simplex (1 pump or valve), duplex (2 pumps), or triplex (3 pumps) level control modes with selectable time delay and fail-safe logic. Embedded level controller can reduce costs by replacing external control hardware. Noncontact sensor is excellent for corrosive, sticky, or dirty liquids, and is broadly selected for pump lift station, sump, and dry tank level applications. CE Certified. RoHS compliant.

FLOWLINE

- Max. pressure: 30 psi
- Temp. range: -4° to 140°F
- Output: 4-20mA, 2-wire

Automatic adaptive signal filters allow plug-and-play operation with optimized obstacle recognition and output signal filtering. General-purpose sensors have a corrosion-resistant polyvinylidene fluoride (PVDF) transducer with Viton gasket and NEMA 4x polycarbonate enclosure—good for corrosive, ultrapure, sticky, or dirty liquids. Included USB key fob simplifies configuration using free WebCal software. Automatic temperature compensation. FM Approved for U.S. and Canada. CE Certified. RoHS compliant.

Point Level Sensors

- Max. pressure: 150 psi at 77°F (25°C)
- Temp. range: -40° to 176°F (-40° to 80°C)
- Accuracy: ±1mm in water

Use in applications where single or multiple alarm activation points are required, such as in low-level reorder or high-level alarm. Sensors can detect dry or liquid at specific points inside a tank and signal an alarm or control a pump or valve. Compatible with controllers, devices, or PLCs that accept dry contact input. ¾" NPT. 12U435 has a failsafe feature that alerts when unit requires maintenance or replacement. 12U432 and 12U433 are rated intrinsically safe. Contact is SPST relay, except 12U434 is SPDT reed. Universal mounting for installation through top, side, or bottom of tank. Thermoplastic construction resists corrosion. Include 10-ft. cable.

Oval-Gear and Turbine Electric Flowmeters

- FNPT connection, except 60UC02, 60UA95 and 60UA99 are spigot, and 60UC06 and 60UC08 are flanged

Oval-gear flowmeters feature a rotating-gear design that can offer accurate readings of viscous liquids, water, oil and chemicals. **Turbine flowmeters** with totalizers can measure both rate and amount of flow.

32ZN69—Features resettable batch total and nonresettable batch totalizer. Not for use with fuel and oils.

36WJ95—Compact, positive-displacement meters measure batch, reset total, and nonreset total.

1YEF6 thru 1YEF9—Provide low-flow measurements with a resettable 4-digit electronic display. Mount horizontally or vertically in-line.

Oval-Gear Mechanical Flowmeter

- FNPT connection

Rotating-gear design offers accurate low-flow readings while the aluminum housing is ideal for petroleum products. For fuel-dispensing pumps and industrial flow measurement. The self-contained unit can be field serviced. The 8 digit to 3 decimal point display can provide batch total (resettable), accumulative (non-resettable), and rate of flow.

Turbine Flowmeters and Accessories

Flowmeters—Rugged construction features tungsten carbide rotor shaft for demanding industrial applications. Compatible with low viscosity fluids and water. Wetted materials: 316 stainless steel and tungsten carbide. For pipelines, production/injection fields, and mining. CSA Certified. For Blancett 3A/Sanitary turbines, go to Grainger.com. **Quiksert Flowmeters—**Designed with wear-resistant moving parts to provide trouble-free operation and long service life.

- Fluid temp. range: -150° to 350°F
- Accuracy: ±1% of reading

Monitor Displays—Allow greater control of your flow operations and feature advanced connectivity design that lets you connect meters to your network for remote monitoring and for process automation capabilities.

Accessories—Repair Kits are designed for easy field repair of damaged flowmeters; no need to replace the entire unit. Kits are factory calibrated to help provide accurate output.

Flow Sensors, Monitors, and Indicators

TURBINE FLOW SENSORS, FT-110, FT-210, AND FT-330 SERIES

- Max. pressure: 200 psi
- Max. operating temp.: 212°F nylon, 176°F Noryl
- 0.5% repeatability, except ±5% 19H256
- 24V max.
- 3-ft. cable
- Can replace dispensing timer systems

FT-330 Series— Designed for water and beverage dispensing applications.

- NSF 61 listed

FLOW RATE MONITORS, RFO SERIES

- Max. operating temp.: 180°F polypropylene case, 212°F brass case
- Compact panel-mount housing

High-visibility rotors and solid-state electronics provide visual confirmation of accurate flow rate pulsed output for water purification/dispensing systems and coolant systems. ¼" and ½" units include low-flow adapters for 0.1 to 1.0 and 1.5 to 12 gpm ranges, respectively. Max. viscosity: 200 SSU.

FLOW INDICATORS, RFI SERIES

- Max. operating temp.: 180°F polypropylene body, 212°F brass body
- Either port may be used for incoming flow

Bright orange rotor provides simple, direct visual flow confirmation on heat exchangers and plastic injection molding equipment. Remove bayonet mounting lens for quick cleanout. Low-flow adapter included. Max. viscosity: 200 SSU.

Compact, economical sensors for OEM applications that require low-flow liquid monitoring. These hall-effect turbine sensors provide accurate pulsed-output metering despite changes in system pressure caused by aging filters. Standard power and output specifications allow retrofitting to existing controllers. Max. viscosity: 32 to 81 SSU, except 32 to 70 SSU for FT-210 19H256.

Engineered Polymer and Lead-Free Brass Flowmeters

Badger Meter

- Fluid temp. range: 32° to 80°F
- Max. pressure: 150 psi
- Accuracy: ±1.5%
- Mechanical dial display

Use to measure water flow in residential and commercial potable water systems, medical systems, desalinization equipment, and in water treatment and distribution systems.

PULSAFEEDER

Lead-Free Brass Inline Flowmeters

22UM71

- Fluid temp. range: 35° to 105°F
- Max. pressure: 150 psi
- Accuracy: ±1.5%
- 6-digit display, except 22UM64 is 5-digit

Mechanical flowmeters feature a multi-jet chamber to help assure accuracy over a wide range of flows with low head loss. The load is equally distributed on the impeller to help prevent wear and maintain accuracy. Ideal for use in car washes, water chlorination, water treatment in cooling tower and boiler systems, and other applications that require proportional control.

Aluminum Air and Gas Flowmeters

Hedland

- Fluid temp. range: -20° to 240°F
- Max. pressure: 1000 psi
- Accuracy: ±2%, except where noted
- Viton seals

Read in standard cu.-ft./min. (scfm); compensate for system pressures between 40 and 130 psi. Anodized aluminum body, piston, and cone. Install in any position, at any angle, even after 90° elbows; no need for special turbulence-reducing fittings.

Electronic Ultrasonic Flowmeters

- Accuracy: ±1% of reading
- Flow material: water-like liquids

Flowmeters feature an easy, non-invasive installation and low maintenance. Units are suitable for measuring clean liquids in energy monitoring, HVAC, power generation, and water treatment applications.

Dynasonics by Badger Meter

Doppler Ultrasonic Flowmeters

- Accuracy: ±2% full scale
- Flow velocity range: 0.15 to 30 ft./sec.

Non-invasive meters measure full-pipe flows of liquids containing suspended particles or aerated liquids such as sewage, mud slurries, and plastics.

DFX Flowmeter Systems—Systems include transmitter and transducer.
- Ambient temp. range: -40° to 185°F

DFX Flowmeter Transmitters—Each transmitter allows up to 4 meters to be interconnected.
- Ambient temp. range: -40° to 185°F

5XPN0

5XPN2

Flowmeter Transducers—Suitable for most plastic and metal pipes.
- Ambient temp. range: -40° to 194°F

Transmitters and Flowmeters

For use in water/wastewater treatment, irrigation, industrial, and HVAC/building automation applications.

Flow Transmitters—Can receive sensor data and convert it to the desired output that represents the flow rate.

BTU/Flowmeters—Measure flow and temperature differential to compute energy in hot service applications. Output is scaled pulse and RS-485 (Modbus and BACnet).
- Fluid temp. range: 20° to 260°F
- Accuracy: ±2%

49DF12

49DF19

Brass Flowmeters—Each sensor comes with 20-ft., 2-conductor 20 AWG shielded UL type PTLC 221°F (105°C) cable.
- Fluid temp. range: 0° to 221°F
- Accuracy: ±1

Stainless Steel Insertion Flowmeters—Suitable for use in flow control and batch type applications.
- Fluid temp. range: 14° to 150°F
- Accuracy: ±1%

BROOKS INSTRUMENT

Acrylic Variable-Area Flowmeters

- Max. operating pressure: 100 psi
- Max. operating temp.: 150°F
- Max. viscosity: 16.4 CST

Clear acrylic meters have stable, easy-to-read floats with English or metric scales. They are integral-valved to permit individual flow control in air-sampling equipment, desalinization equipment, medical systems, water treatment and distribution systems, swimming pools, and aquaculture systems. Back-mounted meters (see Model-Accuracy-Dimensions chart) have standard 10-32 brass inserts for quick installation.

Air and Liquid Flow Switches

McDonnell & Miller
a xylem brand

- Single-pole, double-throw snap switch
- Sensitivity flow adjustment screw
- 120/240VAC operation
- Full load amps: 7.4 at 115V, 3.7 at 230V

Additional flow range information is available on Grainger.com, or call 1-800-GRAINGER (472-4643).

Air Flow General-Purpose—For applications with medium- and high-velocity requirements. Paddle fits 8" minimum duct size (trim to fit 6" duct). Sensitivity flow adjustment screw.

Liquid Flow General-Purpose—Start or stop electrically operated equipment such as signal lights, alarms, motors, automatic burners, and metering devices. 2RUL3 and 2RUL4 have 4 stainless steel paddles that fit 1", 2", 3", and 6" pipe; paddle can be trimmed to fit incremental pipe sizes.

Liquid Flow High-Sensitivity—For heavy-duty applications that need instant switching such as water treatment systems, electronic circuit cooling systems, compressors, booster pumps, and bearings.

Liquid Flow Industrial/ Heavy-Duty—Designed for large pipe applications, including heating and hydronic systems, air conditioning, refrigeration, and process work. Paddles can be trimmed to suit. Fit 2" to 16" pipe with flow rates up to 998 gpm.

Paddle Kits—Designed to replace damaged paddles and return flow switches to original flow-sensing capability.

PULSAtron®

Adjustable Diaphragm Pumps

- Self-priming
- Max. viscosity: 1000cP
- 115V

Adjustable single-head metering pumps have a double-ball check valve and leak-free sealless liquid end. Powered by a high-quality fin-cooled solenoid. Wetted parts: PTFE-faced CSPE diaphragm, ABS body, ceramic ball, PTFE seals and O-rings, and PVC/polyethylene tubing. Each includes foot valve/strainer assembly, backpressure injection valve assembly, 4-ft. suction tubing, 8-ft. discharge tubing, and 4-ft. bleed valve tubing. Models with PVDF construction are NSF 61 compliant.

A Plus Series—Allow you to adjust the stroke length and stroke rate. Pumps are internally dampened to reduce noise and are water-resistant for outdoor use.

C Series—Manual control lets you adjust the stroke length. Models are internally dampened to help reduce noise.

E Plus Series—Feature Off/Manual selector switch, indicator lights, and built in circuit protection.

MP Series—Pumps have automatic control, fully scalable 4-20mADC, 20-4mADC, or external pacing. Relay output and stop input. 16-character LCD is programmable in 4 languages.

Note: Tubing is ⅜" O.D. for Max. Flow to 44 gpd, ½" O.D. for Max. Flow 96 gpd and higher.

Replacement 5-Function Valves—Easy-to-install, corrosion-resistant valves have a chemical-resistant wetted end, with recessed screws.

Adjustable- and Fixed-Rate Peristaltic Metering Pumps

- Self-priming to 24 ft.
- 115VAC

Have chemical-resistant Norprene tubing and PVC fittings for flow up to 300cP, even with outgassing (offgassing) liquids. Rugged ABS enclosure, control cover, and rain shield that allows for horizontal/vertical mounting. PVC head assembly has toolless design, and a jog mode for tubing changes. Include suction strainer, 15 ft. of ¼" PE suction and discharge tubing, injection quill with 7 psi backpressure, and extra pump tube. ¼" MNPT PVC fitting eases connection to piped systems. Replacement tube assemblies are available on Grainger.com. ETL Listed to U.S., Canadian, and CE standards. NSF 61 Approved.

Adjustable-Rate—A timing circuit is adjustable in 1% increments from 5% to 100% of rated flow for a 20:1 turndown ratio. No mechanical adjustment components to wear out.

Variable-Speed—Microprocessor control with LCD allows manual or automatic output adjustment with a 4-20mA signal. 100:1 turndown ratio.

Multipurpose Peristaltic Metering Pumps

- Self-priming to 15 ft.
- 120VAC

Nonclogging, adjustable output, valveless pumps are chemical- and corrosion-resistant and for use with off-gassing chemicals such as hydrogen peroxide and chlorine. Compatible with liquid chlorine, weak acids, detergents, polymers, and wetting agents. Polycarbonate head, Norprene peristaltic tubing, PVC injection fitting, polypropylene strainer with weight, and 15-ft. polyethylene tubing. Max. viscosity: 300cP.

VSP Series, Variable Speed—Adjust output via an internal knob that varies the motor speed. Adjustable from 13 to 100% of rated capacity. 8:1 turndown ratio.

Dolphin Series, 10-Min. Cycle Time—Adjust output via a solid state current interrupter that cycles power On and Off. Adjustable from 10 to 100% of rated capacity. 10:1 turndown ratio.

Replacement Tubes—Include 9 in L Norprene tubing (diameter varies).

Chemical Metering Pumps

- Self-priming to 4 ft.
- 115VAC

49AV26

Compact, chemical-resistant pumps provide dependable metering performance. Degassing models have a degassing valve for use in off-gassing chemicals. All models have a sealed gearbox and eccentric cam for reliable dosing, easy flow rate control and turndown. Motorized-diaphragm technology provides long life even with continuous-duty cycles. 10:1 turndown ratio. PVC/polyethylene tubing with CSPE diaphragm, seals, and O-rings, except degassing models are hypalon. Max. viscosity: 300 cps, except 20 cps for degassing models. Include injection back pressure valve, bleed valve, foot valve strainer with weight, and tubing. ETL Listed.

Peristaltic Metering Pumps

STENNER PUMPS

- Self-priming to 25 ft.
- Reproducibility: ±2%
- 120V

For injecting solutions into commercial swimming pools, spas, well water, municipal/industrial waste water, cooling tower/boiler water treatment, animal health, and various industrial water processing applications. Wet-end materials include Santoprene, PVC, polypropylene, and polyethylene. Max. viscosity: 300cP. Include 20-ft. polyethylene tubing, spare tube, weighted strainer, and injection check valve (100 psi models) or injection fitting (25 psi models). UL Listed, CSA Certified, and conform to ANSI/NSF STD61. Adjustable and fixed rate pumps tested by ETL to conform to ANSI/NSF STD50.

Adjustable-Rate—Feed rate control adjusts from 5% to 100%. Snap-fit components ease disassembly/service. 20:1 turn down ratio.

Fixed-Rate—Can be used with ORP/pH controllers and with proportional metering systems. Include 20-ft. polyethylene tubing, 3 ferrules, 3 connecting nuts, weighted strainer, injector fitting, and spare tube.

Variable-Speed—Digital interface with multiple operation modes, plus analog and digital inputs/outputs with advanced programming, control, and construction. Have tube leak detection, brushless DC motor, and NEMA 4X rating. 100:1 turn down ratio.

Quick-Pro Pump Assemblies—Polycarbonate head with collapsible roller design permits quick, easy tool-free tube change. ¼" tubing connection. 1-pc. peristaltic pump tube construction for greater durability and long life.

Service Kits/Tubing—4VZG8 provides a visual confirmation that fluid is pumping when used with ¼" O.D. polyethylene discharge tubing.

4VZG9 has 4 settings to operate pump when used in conjunction with a dry contact water meter.

Chemical Solution Tank—Translucent polyethylene tank has a large fill opening, spill containment basin, and level indicator. Includes mounting hardware. Compatible with all single-head Stenner pump models.

General Purpose Metering Pumps

STENNER PUMPS

- Self-priming to 25 ft.
- 120VAC, except 481H74 and 481H75 are 115VAC

Compact, adjustable, and feature an innovative "Quick-Release" head for simple and fast tube change. Santoprene peristaltic tubing is FDA-approved and requires no adjustment or lubrication. Ideal for light-duty applications such as injecting chlorine, weak acids, and alkaline solutions. Max. viscosity: 100cP. Accessories included. Pump Tube Replacement Kits include 2 Santoprene tubes and 4 ferrules. Pumps are UL and C-UL Listed.

STENNER PUMPS

Peristaltic Livestock Medicator Pump

- Self-priming up to 25 ft.
- 1:128 injection ratio
- 120V

The Econ Stennicator model is suitable for injecting solutions such as disinfectants, medications, nutrients, and sanitizers into water for treating livestock. Injection is directly into the water line so the solution does not contact any moving parts and avoids fouling and water flow restrictions. Polycarbonate body with santoprene seals and O-rings. Pump has adjustable pulse rate settings and can connect to an existing pulse water meter. Includes 3 connecting nuts, 3 ferrules, injection check valve, weighted suction line strainer, 20-ft. Santoprene tubing, and spare pump tube.

Peristaltic Chemical Metering Pumps

- Max. pressure: 125 psi
- Self-priming to 30 ft.

Durable, cast-aluminum pumps can handle abrasive slurries and aggressive chemicals in most metering, dosing, and transfer applications. No moving parts come into contact with the chemical being metered. Feature stainless steel rollers supported by sealed ball bearings that compress the hose in a more efficient design than frictional shoe-type pumps. Models are positive displacement-style that require no valves to operate and have a stainless steel drive shaft, foot bracket, hardware, and hose fittings for long life. The premium, heat-treated and ground hypoid gearing provides greater efficiency and more reliable performance. The gear motor includes a hollow shaft that allows you to remove the roller assembly if required. Pumps are reversible and can be used to clear blocked lines. Include shim kit and hose lubricant. Hardwired installation required. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160. UL and C-UL Listed, CE Certified.

WARNING: Use only with nonflammable liquids compatible with pump component materials and in nonflammable/nonexplosive atmospheres.

Plastic-Body Permanent Magnet Circulator Pumps

38L996

- 1-phase
- 60/50 Hz, continuous-duty motor

Small footprint and lightweight construction allow easy installation for water circulation and liquid transfer. Semiopen impeller. Ceramic bearing system. Each includes a 4-ft. power cord.

NORYL

Have a shaftless, sealless electronically commutated motor (ECM). Energy-efficient ECM/permanent magnet technology saves up to 68% on electricity. Noryl impeller. 5JKG2 and 5JKG6 max. working pressure: 50 psi; 100-240V. 5JKF8 max. working pressure: 29 psi; 115V.

NORYL/ALUMINUM

Pump motor has a stainless steel shaft and screw, with EPDM O-ring seal. Nylon and 316 stainless steel impeller. Max. working pressure: 29 psi. 115V.

+ To convert to psi, divide total feet of head by 2.31.

Centrifugal and Positive Displacement Pumps

5PXX0

Dayton, Centrifugal—Pumps are suitable for use in liquid transfer and irrigation. They have semiopen impellers and are not self-priming, except 5PXX5 is self-priming up to 4.5 ft.

Ports for 5PXW8 to 5PXX1 and 5PXX4 can be rotated in 180° increments, 5PXX5 in 90° increments. 5PXX3 has a totally enclosed fan-cooled (TEFC), capacitor-start induction motor.

- Intermittent duty, except No. 5PXX3 is continuous
- ⅛ HP

Meziere, Centrifugal and Positive Displacement—Centrifugal models are suitable for use with 50% water/glycol mix. Designed to provide high flow at low head pressure. Brush motor is housed in open dripproof (ODP) enclosure. 21C949 Positive Displacement Pump has a preset pressure relief valve, steel gerotor, and double-lip seal. Suitable for use with Dexron II or equivalent oil.

- Continuous duty
- 5⁄16 HP, except 21C952 is ⅕ HP

Electric-Operated Diaphragm Pumps

- Polypropylene housing
- Sealed motor with run-dry capability

12VDC, WATER-BASED

Permanent magnet ball-bearing motors.

Automatic Demand Pumps—Max. water temp.: 160°F. Meet U.S. Coast Guard (USCG) electrical standards.

Complete Water System—Includes pump and precharged 1-gal. pressurized bladder tank with air valve. FDA-approved materials.

Washdown Pump—Meets USC electrical standards.

Water System Pump—NSF Certified for potable water.

Water System Pump with Valve—Features quick-disconnect plug-in ports, built-in bypass valve, and pressure switch.

12VDC, PETROLEUM-BASED

Suitable for liquid transfer, dewatering circulation, oil changing (warm), and diesel fuel transfer. Meet USCG, ISO 8846 for diesel fuel transfer.

115VAC, WATER- AND PETROLEUM-BASED

Sealed pressure demand switch. UL Listed, UL Recognized, CSA Certified.

INLINE STRAINERS

Recommended for freshwater applications. Stainless steel screen. Mesh size 35. Max. pressure @ 100°F: 70 psi.

Evaporative Cooler/Machine Coolant Pumps

EVAPORATIVE COOLER PUMPS

Used in evaporative coolers, displays, laboratories, and similar water transfer applications.

Polystyrene—Used in evaporative coolers, displays, laboratories, and similar water transfer applications.

- Max. temp.: 122°F
- Max. viscosity: 50 SSU
- 3000 rpm motors

Brass/Bronze—Used in evaporative coolers, displays, laboratories, and similar water transfer applications.

- Max. temp.: 200°F
- Max. viscosity: 500 SSU
- 1725 rpm TEFC motors
- Brass pump body, bronze impeller

COOLANT PUMPS, CAST IRON

- Max. temp.: 200°F
- Max. viscosity: 500 SSU
- 1750 rpm, TEFC motors
- 304 stainless steel impeller, carbon steel shaft (4JPH3 and 4JPH4 have stainless steel shaft)

Used for machining lubricants, coolants, flushing, and circulation. Mounting brackets (sold separately) clamp to pump column at desired position for optimal pump depth.

Immersion 3P744

Immersion 3GRV5

Fuji Electric Dayton

Coolant Pumps

- 3450 rpm motors
- Cast-iron bodies and volutes

Circulate coolant and spray cutting oil. Replacement filters on Grainger.com, search for coolant pump filters and cartridges. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

SUCTION

Mount above liquid level in all locations. Pumps require initial priming. Feature mechanical seals with carbon/ceramic shaft seal, Buna N elastomers, and steel springs. For all types of machines, except grinders.

Fuji—For use with cutting oil only. Install where ambient temp. range is -0°C to 40°C. For indoor use only.

- Max. fluid temp.: 104°F
- Max. viscosity: 340 SSU
- Max. suction lift: 2.3 ft.

Dayton—Mount pump upright only. Pump motor is not designed for immersion in liquid.

- Max. fluid temp.: 180°F
- Max. viscosity: 500 SSU
- Max. suction lift: 2 ft.

IMMERSION

- No bearings, seals, or packing
- Have outlets only

Ideal for pumping liquids with fine contaminants and can be run dry. For all types of machines, including grinders, and for applications with higher temperatures.

Fuji—For use with cutting oil only. Install where ambient temp. range is -20°C to 40°C.

- Max. fluid temp.: 200°F
- Max. viscosity: 683 SSU

Dayton—Pump motor is not suitable for immersion in liquid. Mount pump upright only.

- Max. fluid temp.: 180°F
- Max. viscosity: 500 SSU

Little GIANT

Machine Coolant Tanks and Pump/Tank Combinations

For use on small drill presses, tool grinders, tapping machines, cut-off saws, and small lathes.

Tanks—Include chip collector baffle, flex nozzle, and brass control valve. 5-gal. tank is polyethylene and includes 6-ft. plastic hose. 10-gal. tank is steel and has 4-ft. neoprene hose with brass nuts and deflector plate. Pump not included.

Polyethylene Pump/Tank Combinations—Flexible discharge hose has flow control valve. Removable screen and chip collector.

- Max. temp.: 120°F

Intermittent-Duty Roller Pumps

Dayton

- 4-roller models are coupled to a 12VDC motor
- Self-priming suction lift up to 3-ft. head
- Max. fluid temp.: 140°F
- ¾" FNPT inlet and outlet side ports

Pumps are designed for agricultural and lawn/garden chemical spraying, as well as various chemical transfer applications with nonflammable liquids, such as liquid fertilizers, insecticides, herbicides, and soil fumigants. They won't swell in water and they maintain performance with chemical carriers such as xylene. Counterclockwise pump rotation (facing pump shaft) can be easily reversed for gas engine drivers. (Gas engines must be gear-reduced or belt-driven down to desired pump speed.) Ni-Resist alloy offers better corrosion resistance than cast iron, while SilverCast custom alloy provides corrosion resistance with harsh chemicals such as herbicides.

All pumps have Super Rollers, Viton shaft seals, and double-sealed, heavy-duty ball bearings. 4-roller models also include drivers. 6- and 8-roller models adapt to tractor power take-offs. 3YB55 and 3YB56 have polypropylene rollers. PTO quick couplings are sold separately on Grainger.com.

4-Roller 3YB60

6-Roller 3YB42

ROLLER KITS

Roller replacement kits are for intermittent-duty roller pumps listed on this page. Include rollers, 2 Viton shaft seals, and one O-ring for end plate.

High-Pressure Triplex Pumps

Dayton | AR NORTH AMERICA First Choice When Quality Matters

- Max. fluid temp: 140°F
- Concentric ceramic plungers
- Continuously lubricated seals

Suitable for high-pressure water applications, including car wash, pressure wash, sewer jetting, and cooling misting. Forged brass manifold has high-grade head bolts for added protection and strength. Feature a precision die-cast crankcase and stainless steel valves, plus oversize bearings and connecting rods for heavy load disbursement. 1MDB3 and 1MDB2 have 316L stainless steel manifold and Viton seals.

Direct-Mount, Electric Motor Pumps have standard C-face mounting.

See page 1591 for pressure washer accessories.

New installations require a Pump Rail Kit 4YNP7, sold separately on this page.

Self-Priming Flexible-Impeller Pumps

- Replaceable impellers

No metal-to-metal contact. Excellent for fluid transfer, spraying, lawn/garden applications, filter systems, water drainage, and machine/equipment coolant recycling.

Note: Not to be run in a dry condition.

Dayton—Can be used with nonabrasive fluids in a wide range of commercial, industrial, and agricultural applications. Bronze pedestals can be easily installed with a capacitor-start electric motor with sufficient starting torque.

- Max. temp.: 180°F
- 1725 rpm motors (3ACA9 to 3ACB2 do not include motors)

Jabsco—Replaceable Viton impellers handle more-corrosive liquids.

- Max. temp.: 176°F 316 stainless steel and stainless steel, 180°F epoxy
- 1750 rpm 316 stainless steel, 3000 rpm epoxy and stainless steel

1MDA1

High-Pressure Pump Accessories

Adjustable Chemical Injectors—In-line, corrosion-resistant injectors can be mounted downstream, after the pressure pump and regulating valve, to inject liquid detergents or cleaning agents. Intended for use with a double lance, rollover nozzle, or quick-connect nozzle. Brass, stainless steel, and ceramic construction with Buna N seals.

High-Pressure and Regulating Unloader Valves—Protect pump and system components from surge shock damage that can occur when spray guns are shut off at high pressure. Brass and stainless steel construction with Buna N seals.

Inlet Water Filter—Machined aluminum filter assures a clean water stream for any high-pressure pump. Filter is 50 mesh.

Regulating Pressure Relief Valve—Bypasses the required amount of water to maintain constant system pressure at all times, whether spray gun is open or closed. Brass and 300 stainless steel construction with Buna N seals.

Regulating Valves—Protect pumping systems from excess pressure. Brass bodies. Wetted materials: brass, stainless steel, Buna N, plastic, and steel on valves with male outlets; brass, stainless steel, Buna N, and steel on valves with female outlets.

1MDA1 and 1MDA2 have a bolt-on design with internal bypass system. 1MDA1 fits pumps 4WXV7 to 4WXV9 and 4WXW1 to 4WXW6. 1MDA2 fits pumps 4WXX5, 4WXX6, 5ZNT5 to 5ZNT7, 5ZNT9, 5ZNU0, and 5ZNU1.

1MDA3 and 1MDA4 feature a ¼" accessory port.

Safety Valve—For use as a secondary safety device to help keep pump and system pressure from reaching dangerous levels; must always be used with a pressure regulator or unloader. Adjustable range: 1000 to 4000 psi. ¾" hose barb discharge. Brass and 400 stainless steel construction with Delrin seals.

Thermal Valve—Maintains a max. water temp. of 140°F to protect pump from possible heat damage while in bypass mode. Brass construction with Buna N seals.

Water Check Valves—Brass and stainless steel construction with Buna N seals. Can be mounted in a vertical or horizontal position.

Vacuum Pump and Portable Container

Dayton®

PUMP

Air-operated aluminum-body pump handles cutting fluids, waste oil, paint sludge, contaminated liquids, etc. Automatically shuts off when receiving container is full.

CONTAINER

Smooth, seamless polyethylene drum has 2" NPT bung opening and a ¾" opening. With carrying handle for easy transport.

Description	Construc. Material	Body Material	Item No.
Vacuum Pump, Includes Air Connection Kit, Suction Hose	—	Aluminum	5UWG2

Pedestal Gear Pumps—Intermittent-Duty

Dayton®

- Max. temp.: 210°F, except 230°F on 4KHJ4 to 4KHJ9
- Max. viscosity: 500 SSU at 1725 rpm
- Max. pressure: 100 psi
- Self-priming

Intermittently transfer nonabrasive or nonparticulate viscous liquids with a near-pulseless flow. Not for use in pulley drive systems that do not have a pillow-block shaft assembly. Bidirectional rotation.

Note: Higher viscosity liquids (100,000 SSU) must be transferred with more horsepower at reduced speeds.

BRONZE

Bronze spur gears are great for water-based liquids. Wet-end components: 303 stainless steel, bronze, brass, PTFE, and carbon graphite.

CAST-IRON

Steel spur gears are great for oil-based liquids. Wet-end components: cast iron, steel, and Viton on Viton-seal models; steel, cast iron, and PTFE on PTFE-seal models.

4KHK1

Pedestal Gear Pumps

Dayton®

- Max. viscosity: 500 SSU at 1725 rpm
- Max. pressure: 125 psi
- Mechanical seals
- Self-priming

Transfer nonabrasive or nonparticulate liquids with a near-pulseless flow. Pumps are bidirectional with positive displacement. All have keyed shafts and a seal flush chamber. Shaft ball bearings allow use with pulley-drive systems. Cast-iron and bronze models have pressure relief valves.

Note: Higher-viscosity liquids (100,000 SSU) must be transferred with more horsepower at reduced speeds.

CAST-IRON

- Max. temp.: 280°F

Steel spur gears handle oil-based fluids. Viton mechanical seals with carbon/ceramic faces provide good resistance to compatible chemicals. Other wetted materials are cast iron and steel.

BRONZE

- Max. temp.: 210°F

Fortron polyphenylene sulfide (PPS) spur gears transfer water-based liquids with no metal-to-metal contact; good chemical compatibility. Buna N mechanical seals with carbon/ceramic faces. Other wetted materials are bronze, brass, Fortron, and carbon graphite.

316 STAINLESS STEEL

- Max. temp.: 280°F

Fortron polyphenylene sulfide (PPS) spur gears handle viscous-based fluids and operate quietly with no metal-to-metal contact; good chemical resistance. Viton mechanical seals with carbon/ceramic faces. Other wetted materials are 316 stainless steel, carbon graphite, and Fortron.

Dayton

Adjustable Pressure Relief Valves

- Operate in any position
- Max. temp.: 180°F

Pressure can be set to maximize discharge performance. Some bypass may occur.

WARNING: For use with positive displacement pumps only. Not designed for complete shutoff. Not for hot water heaters, boilers, or steam service. Install only on pressure side of pump to relieve pressure. Using valves under or over rated pressure will cause valve to leak.

Intermittent-Duty Rotary Gear Pumps—Carbonator-Mount

Dayton

- Max. viscosity: 500 SSU at 1750 rpm
- Max. operating pressure: 100 psi
- ODP motor enclosures
- Mechanical seals

These pumps are self-priming and have a pressure relief valve. Bidirectional (reversible) motor drive with thermal overload protection.

CAST-IRON

- Max. temp.: 280°F

Designed for oil-based fluids. Steel spur gears and shafts with Viton seals. Other wetted materials are cast iron, 303 stainless steel, carbon, and ceramic.

BRONZE

- Max. temp.: 210°F

Handle water-based fluids. Carbon graphite bushings and Buna N seals. Other wetted materials are bronze, brass, Buna N gasket, and 303, 17-7, and 18-8 stainless steel.

41TK06

Rotary Gear Pumps—Close-Coupled

Dayton

- Max. viscosity: 500 SSU
- Max. pressure: 125 psi
- Mechanical seals
- Self-priming

Can be mounted on NEMA C-face motors to provide a near pulseless flow with easy maintenance. Feature ball bearings and keyed shafts.

CAST-IRON

- Max. temp.: 280°F
- ODP motor enclosures

Steel spur gears handle oil-based fluids. Viton carbon/ceramic seal with cellulose gasket. Other wetted materials are cast iron and steel. With pressure relief valve.

BRONZE

- Max. temp.: 210°F
- ODP motor enclosures

Fortron PPS spur gears have a linear polymer structure for greater strength, and transfer water-based liquids with no metal-to-metal contact; good chemical compatibility. Ryton PPS gears have a cross-linked polymer construction and can resist a variety of solvents and corrosive chemicals. Carbon/ceramic/Buna N seal and carbon graphite bushings. Other wetted materials include bronze and brass. With pressure relief valve.

316 STAINLESS STEEL

- Max. temp.: 280°F
- TEFC motor enclosures

Fortron PPS spur gears are a linear polymer construction for added strength, and operate quietly with no metal-to-metal contact; good chemical resistance. Viton seal. Sealed flush chamber increases pump efficiency. Other wetted materials are 316 stainless steel, carbon graphite, Graphoil gasket, and ceramic.

CHEMSTEEL®

Rotary Gear Pumps—High Temperature

- Max. temp.: 450°F
- Max. viscosity: 100 SSU, except Pedestal are 500 SSU
- Metering accuracy ±0.5%
- Self-priming

Quietly transfer highly corrosive liquids at higher pressures and temperatures. Pumps have a 316 stainless steel housing and feature Waukesha 88 nongalling helical gears. With heavy-duty 1-pc. combination bearing and full-size carbon bearing wear plate; sized to match the full gear diameter. Pump housings have through-bolt construction with PTFE-encapsulated silicone O-ring housing seals and a seal flush chamber. Other wetted materials include 316 stainless steel, W88 helical gears, PTFE, Kalrez, ceramic, and carbon. Bidirectional rotation. 3-phase pumps do not have overload protection, which must be provided by a starter unit sold separately, see page 160.

Magnetic Drive—These sealless pumps are used to transfer harsh and aggressive chemicals in environmentally sensitive or regulated areas.

- Max. pressure: 110 psi

Mechanical Seal—Type 9T stainless steel and PTFE mechanical shaft seals handle many harsh chemical liquids.

- Max. pressure: 150 psi (2ERA9 is 110 psi)

** To convert to feet of head divide by 2.31. † 3-phase models are inverter-duty rated and meet NEMA MG 1 Part 31.4.4.2 in constant- and variable-torque applications with a 20:1 turndown ratio; see page 157 for AC Adjustable Frequency Drives. # Oberdorfer Chemsteel brand.*

Dayton®

Hot Oil and Filtration Pumps

- Max. temp.: 375°F
- Max rpm: 1725

Bidirectional pumps feature all cast-iron construction and provide a near-pulseless flow in intermittent-duty commercial hot oil transfer applications. Nonclogging pumps have spur gears, and are able to pass nonabrasive particulates and reduce oil shear. Suitable for use in commercial fat fryers, filtration processes, and cooking oil waste removal. Not for use with water-based fluids. Include motor with ODP enclosure, except 6DHH7 and 6DHH8.

Rotary Gear Pumps, Carbonator Mount

- Max. viscosity: 100 SSU

Rotary Gear Pumps, Close-Coupled—Include relief valve.

- Max. viscosity: 100 SSU

Rotary Gear Pump Heads, Carbonator Mount

- Max. viscosity: 100 SSU

PROCON® Products

Carbonator-Mount Rotary Vane Pumps

6XE79

6XE86

1MCX2

- Max. fluid temp.: 158°F
- Max. operating pressure: 250 psi
- NSF rated, except 6XE82 and 6XE84

These positive displacement pumps run quietly, have low vibration and pulsation characteristics, and are virtually maintenance-free. They can handle many liquids with low lubricating characteristics at relatively high pressures. Flow remains constant over entire pressure range. Most models are self-priming (except 6XE92 and 6XE95). Metal-to-metal contact is eliminated, resulting in low starting torque. 303 stainless steel shaft, stainless steel rotors, and built-in relief valve. Pumps mount on NEMA 56C frame motors (adapter kit sold separately) for a coupling drive, or can be attached to a NEMA 48YZ motor with a V-band clamp. High-temperature plastic internal bypass valve eliminates the need for an external relief valve on all models except 6XE92 and 6XE95. (6XE82 and 6XE84 have internal solid-brass bypass valves. Brass and stainless steel also available on all other models; call 1-800-GRAINGER (472-4643).

Pumps work with carbonated, deionized, or distilled water and moderately aggressive liquids—such as fire-resistant fluids, hydraulic oil, lubricants, coolants, insecticides, and soap. For use in dispensers, espresso machines, sprayers, filtration and water purification processes, team-cleaning and car-washing machines, pressure boosters, atomizing/misting humidification systems, circulation systems, laboratory pumps, pilot plants, boiler feeds, textile machines, and fire jockey pumps.

Low lead.

Bronze Couplings—Couplings absorb most of the wear usually inflicted upon pump and motor shafts to protect both in the event of misalignment, extending pump/motor life. Can be easily and inexpensively replaced as needed. Use only with slotted rotors.

Fluid-o-Tech® POWER THE FLOW

Rotary Vane Pumps

- Max. temp.: 158°F
- Max. pressure: 290 psi

These high-pressure pumps provide a steady liquid flow and feature a rugged 303 stainless steel rotor and a graphite vane. Suitable for use in beverage, dairy pasteurizing, liquid transfer, machine coolant, reverse osmosis, and water boosting applications. You can mount all carbonator mount pumps to any NEMA 48Y frame motor. Shaft Saver 34TL24 (sold separately) installs between the motor hub and pump to help reduce wear on the motor and pump shaft. Includes 2 clamps, collar, and coupling. Pumps are NSF compliant and suitable for use in potable water applications.

Compression Packing Seals

Palmetto®

Packing materials are calendared and oven-dried to help make the packing more dense so that fewer adjustments are required. Lubricated seals keep the packing from spinning with the shaft during break-in. Can be cut and formed into individual rings to act as a seal in pumps or valves. See chart for pump and valve performance limits.

Compression Packing Extraction and Insertion Tools

Extractors remove compression packing rings from pumps and valves for replacement. Interchangeable corkscrew and woodscrew tips allow removal of both fibrous and hardened packing. Flexible shafts make it easier to remove hard-to-reach packings.

Tamping Tools are used to install packing rings into the stuffing box.

Packing Seals

- **Standard industry seal 981**
- **Pkg. of 6**

Self-adjusting, shaft-mounted axial lip seals are designed to deflect dust, dirt, mud, and water away from shafts and prevent lubricant loss. Flexible, hinged lip needs no special machining to fit tightly to shaft. Seals automatically vent excess grease during regreasing.

Resilient nitrile rubber (NBR) material stretches over shaft obstructions for easy installation; its natural tension holds the seal in place while the shaft turns.

Pac-Seal Replacement Pump Shaft Seals

- Buna elastomer temp. range: -40° to 225°F
- Viton® elastomer temp. range: -25° to 400°F
- PTFE elastomer temp. range: -350° to 500°F
- 2cc P80 lubricant is included with every seal

Rotary units have crimped head to withstand higher pressures and shaft speeds; stay in-place during installation and protect against being dislodged by foreign material. Hex-torque drive system provides longer seal life and helps reduce wear on shaft.

Types 8T/9T—High-quality, positively driven multispring pusher style for industrial and severe chemical applications. The rotary unit is set-screwed to the shaft for positive drive. Rotaries feature replaceable seal rings. O-ring mount.

- Replace Crane Type 8 and 9, respectively

Type 16—Offer greater pressure and speed capabilities. Unitized rotary seal incorporates crimped-head design and hex-torque drive.

- Replace US Seal Type A, Crane Type 6, and Sealol Type 60L

Types 21/31—Offer dependable sealing in mechanical pumps up to 250 psi. Hex-shaped outer shell reduces stress on components. Type 31 O-ring mount. 1R316, 5NC05, 1R307, and 1R301 need no spring retainer.

- Replace US Seal Type C, Crane Type 21, and Sealol Type 43

Types 51/52—Convolution in seal bellows allows for greater axial movement and shaft deflection than Type 21. Narrow cross-section for ANSI and DIN 24960 seal bores.

- Replace US Seal Types E, D, and Crane Types 1 and 2

Type 8T/9T Type 16 Type 21/31

Type 68—Designed for use in pool and spa pumps. Install with the spring-loaded portion pressed into the pump housing and the mating ring rotating with the shaft.

- Replace US Seal Type B and Crane Type 6A

Type 51/52

Type 68

Eductor Jet Pumps

Pumps use high-pressure liquid or steam to create strong suction within the pump body. The suction draws a second liquid or gas into the pump and then forces it out, under pressure, through the discharge. Suitable for mixing fluids, vacuum pumping water, and seawater desalination.

Temp. range: -40° to 230°F, except liquid-operated PVC is -40° to 70°F. Max. head: 40 ft. Max. suction lift pumping liquids: 27 ft. liquid-operated models, 20 ft. steam-operated models. Inlet pressure pumping liquids: 35 to 150 psi, except 15 to 200 psi liquid-operated with 316 SS and bronze inlet and 15 to 100 psi liquid-operated with PVC inlet. Steam-operated models inlet pressure pumping gases: 20 to 80 psi.

Gas Suction (cfm)

Suction Pressure	30 psi Steam, Max. Outlet 0 psi	60 psi Steam, Max. Outlet 0 psi	90 psi Steam, Max. Outlet 0 psi
Atmos.	36 cfm	30 cfm	28 cfm
15" Hg	6 cfm	13 cfm	8 cfm

** Charts show suction flow based on a 1½" suction/discharge pipe size. To determine the suction flow for other pipe sizes, use the sizing factor shown in the table as a multiplier. For example, a pump with a 40-ft. discharge head, 5-ft. lift, and 200 psi water pressure, has a suction flow of 22.5 gpm (based on 1½" suction/discharge). For the suction flow of a pump with a 1¼" suction/discharge, multiply 22.5 gpm by the 0.61 sizing factor to get 13.7 gpm.*

Water Softener Salt

- Pkg. qty.: 1 bag
- Pack unit of measure: each
- Ship in pallet quantity (see Grainger.com for pallet quantities)

Softener salt neutralizes acid and removes minerals and scale buildup in water to extend the life of fixtures, pipes, and appliances, and resist bridging and mushing in the brine tank. Larger cubes are less likely to clump together compared to smaller salt crystals.

Crystal Form—Softener crystals help minimize tank residue and are made by evaporating salt water in shallow outdoor ponds. These crystals offer a natural option for softening hard water.

Pellet-Formed—Pellets or pillows form when smaller salt granules are compacted together. These larger salt pellets are less susceptible to clumping than smaller salt crystals.

Cube-Formed—Cubes form when smaller salt crystals are compacted together for extra hardness. The larger salt cubes help prevent salt from clumping in water softener tanks.

Pellet-Formed Salt with Iron Fighter Additives—Salt pellets have additives that soften water with high-iron content. They are pillow shaped and help prevent stains on laundry, fixtures, tubs, and sinks.

Cube-Formed with Iron Fighter Additives—Salt cubes soften water with high-iron content. They have a compacted shape for extra hardness and prevent stains on fixtures, sinks, tubs, and laundry.

Water Softeners

North Star Water Conditioning · 3M · Pentair Everpure · Pro Products LLC · Neutra 7®

Water softeners use an ion exchange process to convert hard water into soft water by reducing mineral content. Hard water inhibits the effectiveness of laundry detergents, soaps, and shampoos and can cause bathtub rings and spots on glassware. **Multi-Tank** units include separate resin and brine tanks that work in tandem to soften water.

Commercial Multi-Tank—Built for commercial use, they withstand constant use in hotels, restaurants, and large institutional facilities.

Residential Multi-Tank—These tanks connect by a fill tube and include a discharge tube to flush out excess brine water.

Residential Single-Tank—These systems consist of a resin tank and a brine tank in one cabinet for residential use. Single tanks have a smaller footprint than multi-tank softeners. These tanks use sensing technology to indicate softener efficiency while minimizing salt and water usage.

WATER SOFTENER CHEMICALS

Iron & Rust Removers—Remove rust and other ferrous debris from the internal components of a water softener.

Scale Inhibitor—Increases water treatment system efficiency by reducing the amount of scale in the system.

Water Neutralizer—Helps keep water system parameters within acceptable levels by moderating the pH level of the system or by introducing organic reactants to remove contaminants.

Drip Irrigation System—Metering pump system automatically injects solution from the feeder tank into an irrigation system.

Note: We recommend that water be analyzed before selecting water treatment equipment.

Drinking Water Filter Housings

Housings hold compatible drinking water filter cartridges. They are composed of two parts: the filter cap and the filter sump. The sump is the container that holds the filter cartridge in place and channels water through it for filtering. The filter cap allows water to flow in and out of the sump correctly.

Hot Water & Steam 53GK30

Beverage Machine 53GK26

Hot Water & Steam & Beverage Machine Water Filters

Filters improve water quality and extend the service life of equipment in commercial kitchens, restaurants, and coffee shops.

Hot Water and Steam Filters withstand hot water and steam to reduce contaminants in coffee, espresso, tea, and steam equipment.

Beverage Machine Water Filters maintain better tasting cold beverages.

Elkay 11U265

Bottle Filler Water Filters

- Carbon filter media
- Flow rate: 1.5 gpm

Bottle filling stations use these water filters to remove contaminants and improve the quality of drinking water with no unpleasant smell or taste.

PENTAIR

Complete Appliance Water Filtration Systems

All systems and replacement cartridges are certified for use in potable water applications.

Coldrink 2-MC² System, 6XWU0—Improves the taste of fountain beverages and helps retain the beverage's carbonation. Micro-Pure II media helps inhibit bacteria growth. Protects beverage system seals, pump, tubing, and small orifices from abrasive wear, clogging, and corrosion.

QL3-BH2 Coffee Filter, 6XWU1—Provides premium quality filtered water for coffee and beverage applications. Reduces scale buildup and prevents lime scale from forming in brewers. Micro-Pure II media helps inhibit bacteria growth.

Kleensteam II Single System, 5WFG5 & Twin System, 6XWU2—Systems deliver high-quality filtered water for steam applications, and have scale inhibitors and deliming capabilities. Cartridge design is suitable for low- or high-flow capacity steamers. Improve the performance and help extend the life of steam equipment.

Kleenware HTS-11 System, 5WFH4—Inhibits mineral deposits and provides corrosion protection. Helps extend the life of food service equipment. Suitable for use in commercial glassware washers, dishwashers, and warewashing booster heaters.

SR-X Scale Inhibitor Feeder and Deliming System, 5WFH3—Provides scale reduction for steam applications as well as deliming capabilities. Include clear SR-X housing, SS-10 cartridge, dip tube assembly, and 2.2-lb. package of ScaleKleen for scale removal and deliming.

E10 Coarse, 5WFH1 and 5WFH2—Prefilter cartridges feature tightly spun media.

Insurice Filtration Systems, 5WFG3 and 5WFG4—Reduce problems in ice machines caused by scale buildup from dirt and dissolved minerals. 5WFG4 features a water shutoff, flushing valve, and outlet pressure gauge.

Insurice Single PF-i2000, 6XWT9—Filter system reduces scale buildup from dissolved minerals and dirt, and helps reduce clogging of distribution lines, evaporator plate, and pump. Micro-Pure II media help inhibit bacteria growth.

QC7i Filter Head Assembly 5WFG6 and 5WFG8—Include a built-in water shutoff valve, pressure gauge, and mounting hardware. Accept many Everpure specialty cartridges including cartridges for ice, coffee, espresso, and fountain beverage machines.

ScaleKleen Scale Remover/Delimer, 5WFH0—Can be fed into the water system without the use of hazardous chemicals or special piping.

Hot Water & Steam Filtration Systems

3M

- Max. pressure: 125 psi
- Max. temp.: 100°F
- NPT connection

Systems operate with 2 separate streams exiting the manifold, with 1 stream adding a scale inhibitor from a dedicated cartridge, the second stream supplies cold beverage dispensers and includes no added scale inhibitor. Carbon filter media. All systems are NSF Certified.

Reverse Osmosis Appliance Water Filtration Systems

3M

- Max. pressure: 125 psi
- Max. temp.: 100°F

Reverse osmosis filtration systems use a multistage process including prefilters and semi-permeable membranes to remove contaminants in water. RO water filtration systems install new or replace existing RO systems. These systems include filter heads, filter housings, filters, installation kits, and additional accessories.

Felt Sewn Seam Filter Bags

- Max. pressure: 200 psi

Multiple-layer bags have a composite construction of microfiber, felt, and spun-bonded materials to hold 3 to 4 times more dirt than standard bags. All-sewn construction. For use with oxidizing agents, organic solvents, petroleum and vegetable oils, organic and mineral acids.

Felt Seamless Filter Bags

Single-layer bags are ideal for high flow rates. Handle and ring sewn in at top allow easy filter changes. Welded seams. Glazed finish for low fiber migration, good depth filtration, and good solids-holding capacity. For use with alkalies, organic solvents, petroleum and vegetable oils, organic and mineral acids.

Drop-In Solid Filter Cartridges

- Max. pressure: 125 psi

Polypropylene cartridges capture and remove solid contaminants from water and industrial liquids. These one-piece, depth-type filters trap particulates throughout the filter structure. They fit compatible housings to provide filtration for process water, plating solutions, and chemical processing fluids.

Drop-In String & Blanket Wound Filter Cartridges, Series Fulflo Honeycomb

- Inside dia.: 1”
- Max. pressure: 30 psi
- Pkg. of 6

Single-piece construction eliminates spacers and bypassing. Cartridges trap the solid particles on and within the depth of the entire cartridge. Fit all similar competitive housings. Can be used in many fluid applications including oxidizing agents, concentrated alkalies, potable liquids, dilute acids, and alkalies. Also suitable for use with mineral acids, organic acids, solvents, petroleum oils, photo solutions, amines, and water.

3M

Drop-In String & Blanket Wound Filter Cartridges, Series MicroKlean D

- Outside dia.: 2⅞"
- Inside dia.: 1"
- Max. pressure: 125 psi

Suitable for food and beverage and other regulated applications. Allow for very low pressure drops, high flow rates, longer filter life, and more cost-effective filtration. Ideal for potable water, food processing, electronics, and electroplating applications.

Drop-In Pleated Filter Cartridges

Parker domnick hunter PENTAIR PENTEK

- Polypropylene
- Inside dia.: 1⅛"

Abso-Mate—Absolute rated polypropylene construction is compatible with most chemicals, acids, bases, and solvents. Backwashable. 1-pc. construction eliminates bypass. Ideal for membrane prefilter and chemical-handling applications.

Pentek ECP—Resin-impregnated cartridge provides higher wet strength than regular cellulose cartridges. Offer high flow rates and dirt-holding capability, while maintaining extremely low pressure drops.

Pentek R—Bacteria- and chemical-resistant, suitable for residential and commercial applications.

Pentek S1—Economical prefilter for dirt and sediment reduction in applications with chlorinated water.

Polyflow-G—Thermally bonded 100% virgin polypropylene ensures clean filtrates and excellent chemical/thermal compatibility. Ideal for solvent filtration, liquid clarification, recirculation, general water filtration, reagent-grade chemicals, and DI/RO prefiltration.

Stainless Steel Bag Filter Housings

PENTAIR PENTEK Parker Filtration

- NPT connection

These housings are durable, resist corrosion from caustic chemicals, corrosive fluids, oils, and gases, and withstand pressure and high temperatures. Type 304 stainless steel housings are easy to sanitize and resist corrosion caused by water, heat, saltwater, acids, and minerals. Type 316 stainless steel housings have a higher nickel content than 304 stainless, plus molybdenum, for even greater corrosion resistance. These filter housings hold compatible process water bag filters in water management, food and beverage processing, and industrial processing applications.

Commercial Electric Water Heaters

- ¾" NPT water connection, except Heavy-Duty models are 1½"
- Include T&P valve
- 3-yr. limited manufacturer's warranty on tank and 1-yr. limited manufacturer's warranty on parts

Point-of-Use, 1-Phase—Provide hot water at the consumption point and help reduce costly temperature loss due to long piping runs.

Light-Duty—Use in applications requiring moderate quantities of hot water. Feature innovative upper and lower resistored elements. Max. temp. setting: 180°F.

Heavy-Duty—Models provide high hot water recovery in applications requiring large quantities of hot water. The System Sentinel feature provides a diagnostic panel with LEDs that correspond to the number, location, and status of each element. Multiple screw-in type stainless steel elements resist burn out and corrosion. Include a full port/full flow brass drain valve. All 3-phase models are field convertible to single-phase.

Residential Electric Water Heaters

- ¾" NPT water connection
- Include T&P valve
- 1-phase
- Low-lead compliant

Include full flow brass drain valve, except for Classic Point-Of-Use models.

Classic Point-Of-Use—Can fit under cabinets, counters, or mop sinks. One resistored stainless steel element to help prolong anode and tank life. 6-yr. limited manufacturer's warranty on tank and parts.

Classic—The resistored copper upper element and resistored stainless steel lower element help prolong anode and tank life. Include an EverKleen self cleaning device. 6-yr. limited manufacturer's warranty on tank and parts.

Marathon—The seamless, blow-molded polybutene tank impervious to corrosion and rust. The durable, molded polyethylene outer shell resists dents, salt air, and scratches. Includes a thermally-fused upper element, and titanium lower element. Used in a residential application has limited lifetime tank warranty, 6-yr. limited parts warranty when registered online within 90 days of installation. Commercial application has 5-yr. limited tank warranty, 1-yr. limited parts warranty.

Table Top—Ideal for installation in kitchens or other work spaces. Model has an acid- and heat-resistant baked enamel top, 4" backsplash, and rear plumbing connections. 6-yr. limited manufacturer's warranty on tank and parts.

Electric Hot Water Auto Booster

Compact unit only operates when hot water is required and provides up to 45% more hot water capacity. Booster can be installed on an existing tank water heater or nearby wall, and features programmable Vacation and Eco modes. Model has an external temperature display, rugged stainless steel heat exchanger, and a field serviceable element. Accuracy: ±1°F. ETL Listed.

Electric Mini-Tank Water Heaters

- Factory-installed T&P valve

Simply plug into a standard wall outlet and set thermostat control, except 21EW70 and 5AE45 are hardwired. All have glass-lined tank with titanium inside, stainless steel heating element, and 30" grounded 16/3 cord. Eemax MiniTank models have a 5-yr. limited manufacturer's warranty. Bosch heaters have up to 98% thermal efficiency and a 6-yr. limited manufacturer's warranty. UL Listed and UPC Certified; except Eemax models are ETL Listed, CSA and UL Certified.

Bosch Electric Tankless Water Heaters

Mount under sinks in any direction. Meet National Appliance Energy Conservation Act. UL and C-UL Listed, are low lead, and certified for use in potable water applications.

Note: Pay careful attention to unit selection. Temperature and volume of water are dependent on the kilowatt rating of heater. The higher the kilowatt rating, the greater the volume of hot water. Max. outlet temp.: 135°F. These heaters are not designed to be used as boosters or preheaters. Install without a temperature/pressure relief valve (refer to local codes) close to the faucet or tap to eliminate long pipe runs. ½" NPT inlet and outlet.

Sanitizing Commercial Water Heaters

- ASME T&P valve included
- Max. temp: 190°F
- Water connections have 1¼" NPT dielectric nipples

These 240V, 3-phase electric units provide 180°F sanitizing rinse water to comply with NSF and all federal, state, county, and local department sanitation codes. Screw-in type heating elements. LED diagnostic panel signals any nonoperating element. Glass-lined storage tank. 6" stainless steel legs. 150 psi working pressure. Fused 120V control circuit. 3-yr. manufacturer's warranty on tank.

Eemax

Eemax Electric Tankless Water Heaters

Compact, energy efficient, and instantly heat water as needed and can provide endless hot water. Easy to install and require no drain pans, T&P valves, or venting. Have field serviceable elements and are ideal for use in commercial, industrial, residential and safety applications. All models are low-lead NSF 372 compliant and UL Listed.

LavAdvantage—Ideal for point-of-use handwashing and emergency eye wash fountain applications.

AccuMix II—Meet UPC 407.3 requirement with integrated ASSE 1070 mixer set not to exceed 110°F.

FlowCo—Ideal for point-of-use handwashing applications.

ProSeries—Commercial-grade for applications requiring up to 8 gpm. Can accommodate point-of-use and multiple fixture use.

Series Two—Thermostatic models suitable for commercial and residential applications up to 4 gpm.

Three Phase—Commercial-grade for up to 5 gpm in 3-compartment sink and hot water process applications.

SafeAdvantage—ANSI Z358.1-compliant, commercial-grade models for use in emergency drench shower and eye/face wash applications.

SpecAdvantage—Models are commercial-grade and designed for low, duty cycle applications where precise temperature control is needed.

Professional Classic Electric Tankless Water Heaters

Rheem

Energy-efficient water heaters only heat water when you need it. Compact models can save energy, water, and are ideal for delivering unlimited hot water in commercial and residential applications. Require no venting, T&P valves, or drain pans to help ease installation. Include durable brass or stainless steel heat exchanger and a field serviceable element. 53UJ81 and 53UJ82 feature an external temperature display and control, and self-modulating power technology. All models are UL Listed and CSA Certified.

Commercial Gas Water Heaters

Standard Hot Water Recovery—Multiflue tank has top, front, and rear inlet/outlet water connections. Multiple magnesium anode rods resist corrosion. Spark-to-pilot ignition system, fiberglass insulation, and the innovative System Sentinel diagnostic system with LEDs that verify heater status. Altitude certifications vary according to model and gas type. 80% thermal efficiency on 98,000 to 399,900 Btu models with 180°F max. temp.

Low NOx—Power assist enclosed burner design with stainless steel multiport burner tubes. Universal multiflue tank design with high limit temperature cutout.

Ultra Low NOx—Power assist burner design has stainless steel multiport burner tubes for longer Ultra Low NOx performance, <14ng/J.

High Recovery—38UP25 has an innovative, high-temperature, porcelain/enamel coating for corrosion resistance. Automatic control system shuts off gas supply if pilot is extinguished. Anode rods are magnesium construction for long tank life. 3CFJ7, 6E740, and 3CFJ8 have innovative System Sentinel diagnostic system with LEDs that verify heater status.

Residential Gas Water Heaters

- Max. pressure: 150 psi
- Factory-installed T&P valve
- ¾" FNPT water connections

Heaters feature the innovative Everkleen system that helps reduce sediment build up. Models have a piezo igniter, glass-lined tank, enhanced flow brass drain valve, and anode rod. Suitable for natural gas, except 38UN64 and 38UN63 are LP gas compatible. All have an Eco-friendly burner and Low NOx design that meets 40ng/J limit. All water heaters are built and shipped for standard-altitude areas, but will perform at a derated value in higher altitudes. All heaters are AHRI and CSA Certified.

Note: Not for use in mobile homes. Conversion kits are not available. For SCAQMD-compliant heaters for California, call 1-800-GRAINGER (472-4643).

Triton Ultra High Efficiency Commercial Gas Water Heater

- Max. temp.: 185°F
- Water connections: 1½" (top), 2" (side)

Feature up to 98% thermal efficiency and the LeakSense integrated leak detection system that can catch leaks as small as a grain of sand. EcoNet technology can provide performance updates and alerts via mobile devices and a full-color LCD display. 455C80 to 455C83 add the LeakGuard system with an innovative auto shut-off valve that allows no more than 24 oz. of water to escape the tank in a vacuum lock. All models provide ongoing monitoring of vital components to help detect and alert of potential issues, plus the innovative built-in condensate neutralizer helps reduce water acidity for safe drainage. Power vent or power direct vent. CSA Certified and ASHRAE compliant.

Rheem Commerical Gas Tankless Water Heaters

- ¾" gas and water connections
- Electronic ignition

Featuring up to 97% thermal efficiency these tankless water heaters have 185°F built-in maximum temperature and common venting for up to 10 units with Rheem polypropylene header kit. Design allows a variety of room air intake configurations. 459W41 to 459W44 have a manifold featuring a factory-installed translator that can connect up to 20 units in a daisy chain via included cable. All models have 5-yr. limited manufacturer's warranty on heat exchanger and parts, 1-yr. limited manufacturer's warranty on labor. AHRI, CSA, and Energy Star Certified.

Stainless Steel Gas Appliance Connectors

Dormont A WATTS Brand

Use with natural gas, LP gas-air mixtures, or LP gas systems. Additional lengths are available; call 1-800-GRAINGER (472-4643). Certified for indoor and outdoor use.

Connectors comply with ANSI Z21.24 CSA 6.10, ANSI Z21.75/CSA 6.27, and NY MEA #376-92M.

Note: Code requires that a manual shutoff valve be installed on the gas line ahead of the connector. A new connector must be used on all new or moved appliances (ANSI Z21.24).

Food Service Gas Connectors and Kits, Quick Disconnects, and Fittings

Dormont A WATTS Brand

ANSI and CSA Certified.

Gas Connector Kits, 4XR86 and 4XR87—Include 48" hose with antimicrobial PVC coating, SnapFast quick disconnect, restraining cable, and mounting hardware. Comply with ANSI Z21.69/CSA-6.16, ANSI Z21.41/CSA 6.9, and ANSI Z22.1NFPA 54.

SafetyQuik Quick Disconnect Shut Off Valves—Gas connector cannot be disconnected until the gas flow is shut off or opened until the gas connector is reattached. Safety thermal shutoff stops the flow of gas when the internal temperature exceeds 350°F.

SnapFast Quick Disconnect Couplings—Safety thermal shutoff stops flow of gas when internal temperature exceeds 350°F.

SwivelMax Swivel Fittings—Allow complete 360° multiplane movement.

- ⅜" OD inlet

Fountains and Bottle Fillers provide single- or bi-level access to water. These fountains mount at user-desired heights and are available separately or combined with bottle fillers for indoor use. **Standalone Bottle Fillers** dispense water into refillable bottles and cups. These bottle fillers incorporate a narrower design to fit on walls with limited depth.

In-Wall Drinking Fountains & Bottle Fillers

- Indoor use
- 115V AC

Single Drinking Fountains are self-contained and mounted fully or semi-recessed in walls with limited depth.

Two-Level Drinking Fountain is fully recessed in the wall and offers bi-level stations to accommodate users of varying height.

Standalone Bottle Fillers are fully recessed within walls, and are ideal for narrow walkways and small spaces. Bottle fillers reduce single-use plastic bottles.

Freestanding Drinking Fountains & Bottle Filler

ELKAY Halsey Taylor

- Indoor use
- Non-filtered
- 115V AC

Units are mounted directly to the floor and do not require a wall or other vertical surface for installation, and are electric corded. They are commonly installed next to a wall to allow for easy integration into existing plumbing. Top push button actuation, except **49T427** is push button on bubbler. **3EMY7** includes back panel for floor-standing installation. **4CE97** features a glass filler spout for filling water containers with hot water and is activated by a tap-style lever. **3EMZ1** includes a hands-free glass filler. **787CW5** includes water filter and is ADA compliant.

Outdoor Drinking Fountains & Bottle Fillers

ELKAY Halsey Taylor

- 115V AC (electric corded models)

Drinking fountains and bottle fillers are built to withstand tough weather conditions. The stainless steel exterior are ideal for high-traffic areas, such as parks, pool decks, golf courses, schools, and work campuses. They are available for outdoor wall-mounting or as freestanding units with single or two-level access to accommodate users of varying height. **33KJ65** two-level fountain with bottle filler is offset to allow multiple users to drink or fill water bottles simultaneously. An additional pet fountain features slow drainage for easy drinking.

Water Coolers & Dispensers

- 115V AC, electric corded
- Plumbed units: ¼" inlet pipe size
- Still water type

Bottled Water Dispensers—Freestanding dispensers hold pre-filled water bottles to deliver cold, hot, or room temperature water.

Plumbed Water Dispensers—Connect directly to existing water lines for on-demand drinking water.

Countertop Plumbed Water Dispensers—Dispensers distribute water from a single supply point with a smaller footprint for table or countertop use. **437T21** and **437T22** dispense sparkling/still water.

Replacement Parts—Used to help with the installation, maintenance, and repair of these units.

Remote Water Chillers

- Galvanized steel housing
- 115V AC

Water chillers convert non-refrigerated drinking fountains, bottle fillers, and water dispensers into chilled drinking water. These fully enclosed units are indoor rated, available in multiple sizes to serve 1-3 drinking fountains, and install remotely under sinks, counters, or inside walls.

Undersink Pipe & Valve Covers

- Fit most undersink piping
- Easy installation—no tools required
- ADA compliant (except 447P05, 447P06 & 447P07)

Use to conceal piping, electronic faucet connections, mixing valves, and trap primers. Easy-to-clean molded vinyl resists impact, stains, and chemicals.

STUDOR IPS CORPORATION

Air Admittance Valves

1ATD5

- Use as individual, branch, circuit, or stack vents

Allow air to enter DWV systems to equalize pressure when water drains out of the system; eliminate the need for costly roof penetrations and vent piping. 1ATD5 and 1ATD6 meet ASSE 1050/1051 and NSF 14.

Type	For Use With	Pipe Dia. - Drains	Color/ Finish	Material of Construction	Item No.

Drain Sumps and Trench Pans

- Wheel load rating: Class C

Compatible with various pipe sizes including 4" dia pipe. **Drain Sumps with Grate** feature a universal snap-in pipe seal and a contoured bottom that directs all water to the drain to help eliminate standing water. For use in landscape or hardscape drainage and below downspouts. **Trench Pan Drain** and **Trench Pans** are for use in concrete, linear surfaces including driveways, floors, and truck docks.

Roof Drains

Protect connected piping and drain sump from debris. For use on flat roofs.

JR Smith—11U241 and 11U242 include flashing collar and mounting screws. 11U240 retrofits most existing roof drains to accept a Jay R. Smith dome.

Watts—1WXC4 includes flashing clamps with integral gravel stop and self-locking poly dome.

Zurn—22F375 and 22F376 include a combination membrane flashing clamp/gravel guard. 22F405 and 22F406 feature a a drop-in connection to ease installation.

Floor Drains and Grates

Nickel-bronze floor drains are for use in kitchens, restrooms, and other foot traffic areas. 11U236 flashing collar drain body can be used for on-grade areas where a waterproofing membrane is required. The strainer can be adjusted up to 2" above from the top of the drain body.

Sink Material & Bowl Size

Corterra—A solid surface polymer resin (plastic) with a sleek, durable finish.

Vitreous China—Also called ceramic or porcelain, this clay-based material is made from dense clay that is heated or fired, cured, and glazed. Durable, low-maintenance, won't rust, fade, or discolor.

Stainless Steel—One of the most durable, low-maintenance sinks. Resists stains, scratches, cracks, peeling, and dents.

Terreon—A recycled resin (plastic) that creates a smooth, nonporous surface. Easy to clean, Terreon resists chemicals, stains, heat, scratches, and UV light.

Bradstone—A durable plastic made from reinforced thermoset polyester resins, inorganic fillers, and fade-resistant pigments.

Molded Stone and SMC Fiberglass—Plastic materials molded from a calcium base bonded with long glass strands. Smooth materials are strong and fire retardant.

Polypropylene—Plastic construction resists stains, rust, scratches, impact, and dents.

Terreon 20HP04

Vitreous China 493H77

Sinks are installed directly on the wall to save space, eliminate the need for bathroom vanities, and provide storage space below the sink. They are commonly used in smaller bathrooms such as in small offices and patient rooms.

Bathroom Sink Kits 10J133 to 10J138—Complete, ready-to-install lavatory sink packages include wall hanger, faucet, grid drain, and cast trap.

Counter-Mounted Bathroom Sinks

- White vitreous china
- ADA Compliant

Sinks mount above or below the countertop in commercial and residential applications such as apartments, office buildings, and restaurants. **Drop-in Bathroom Sinks** "drop" into a hole in the countertop and have an edge that overhangs the countertop to keep it in place. **Undermount Bathroom Sinks** are installed from under the countertop and are held in place with brackets to create a continuous flow from sink to countertop, eliminating the lip between the edge of the sink and the countertop where food particles or dirt can get stuck.

One-Bowl Dual Lever Handle Faucet 3JDU1

Freestanding Kitchen & Bar Sinks

Utility sinks, or scullery sinks, are made of stain-resistant stainless steel, and have a deep bowl for dishwashing and rinsing glasses, dishes, or large pots. They are typically used in commercial kitchens in school cafeterias, hospitals, and restaurants. **Sinks With Faucets** have 4" mounting centers and low-arc faucets that mount to the deck. **Sinks Without Faucets** have 8" mounting centers (except 13G617, 13G618, and 13G594 are centerset), in the deck or splash. **Drainboards** prevent spills and provide a food preparation or dish drying surface.

ORION

Counter-Mounted Hospital and Lab Sinks

- 1½" drain opening

Black, polyethylene cup sinks are resistant to corrosion, scratches, and chemical reactions. They fit into a hole cut out of a lab countertop. A rolled and finished rim, or protruding edge, sits above the countertop and overhangs the hole in the counter to keep the sink in place. They are suitable for use in both educational and commercial laboratories.

Counter-Mounted Hand Sinks & Hand Wash Stations

Stainless steel drop-in sinks are ideal for washing hands in classrooms, cafeterias, and laboratories. They have a rolled, finished edge that overhangs the countertop to keep it in place. 5JC22 has a mouth guard that flexes on impact and a built-in adjustable flow control.

Wall-Mounted Hand Sinks & Hand Wash Stations

All-purpose stainless steel sinks are anchored to and supported by a wall, which eliminates the need for oversized cabinets or countertops. **Sinks With Faucets** are gooseneck faucets, except 3LMR5, which is a double-joint faucet, and 11U391, which is a low-arc faucet. 11U392 includes eyewash attachment. **Sinks Without Faucets** have openings for drainage and additional ⅞" holes in the splash for faucets and handles.

SANI-LAV

Freestanding Hand Sinks & Hand Wash Stations

Freestanding stainless steel sinks are supported by four legs, feature a deep bowl for scrubbing and rinsing, and allow clearance below the sink for cleaning or storage purposes. These all-purpose sinks are found in schools, factories, and lavatories.

Sinks With Faucets—Sensor models have an AC- or battery-powered sensor to activate water flow and a mixing check valve. All faucets are gooseneck with single hole installation, except wristblade handles are 8" center. 2 gpm flow rate.

Sinks Without Faucets—Sinks have openings for drainage and additional ⅞" holes in the splash for mounting faucets.

Wash Fountains

Large wash basins allow several people to simultaneously wash their hands. Water spray is activated by foot controls, push buttons, or touchless sensors, which shut off automatically. Wash fountains provide more hand washing stations per square foot than conventional lavatory sinks and can accommodate more users in high-traffic areas, such as restrooms in schools, stadiums, and airports. **Foot Pedal-Operated Wash Fountains** are hands-free and activated by users stepping on a large foot pedal or bar. Stepping off the pedal or bar stops the flow of water. **Push Button-Operated Wash Fountains** deliver metered water for washing hands then automatically shut off to save water. **Sensor-Operated Wash Fountains** are hands-free and activated by a sensor that automatically starts and stops the flow of water.

Counter-Mounted Drop-In Utility & Laundry Sinks

Utility sinks have a deep single bowl, an opening for drainage, and are made of SMC Fiberglass for extra strength and durability. They "drop" into a hole in the countertop and have an edge that overhangs the countertop to keep it in place. Sink accommodates a single- or dual-handle faucet with a 4" center that mounts to the deck.

Mop Sinks

- 3" drain

Sinks allow personnel to rinse mops and empty bucket contents with minimal lifting or strain. They are typically mounted on or near the floor in janitorial closets or maintenance rooms. **Corner Mop Sinks** install in corners to maximize space. **Mop Sinks with Drop Front** have a shorter or notched side for easy pouring. **Mop Sink Bowls** have higher sides to contain water splashes inside the sink.

Food Waste Disposers

- Quiet Dura-Drive split-phase induction motors have permanently lubricated bearings
- Quick Lock mounting system for easy installation
- Intermittent-duty, except Commercial models are continuous-duty

1725 rpm, 60 Hz, with overload protection and manual reset.

BADGER SERIES

Include two 360° stainless steel swivel impellers, dishwasher drain connection, stainless steel sink flange, and self-service wrench. 31EE15 and 31EE16 include a power cord.

EVOLUTION SERIES

Stainless steel grind components ensure dependable performance. Multigrind 2- or 3-stage shredder and sound-reducing insulation. Sink baffle included.

Septic Assist, 2YB95

Bio-Charge technology injects a microorganism-rich solution that breaks down and liquefies waste for safe handling in a septic tank.

Excel, 2YB91

Jam-Sensor circuit automatically increases motor torque up to 500%.

ESSENTIAL XTR

Features SoundSeal technology for quiet operation and MultiGrind technology that provides 2 grinding stages versus 1 stage in many standard disposers. Includes a SinkTop Switch accessory with button and power to ease activation.

COMMERCIAL FOOD SERVICE EQUIPMENT

- 1-yr. manufacturer's warranty

Note: New installations require a mounting adapter, sold separately on this page or go to Grainger.com and search for "disposer, mounting adapter."

LC-50

Automatic reversing motor provides longer life and trouble-free operation. Stainless steel grind chamber. Disposer mounting included.

SS Series

Triple-lip motor seal protects motor from water damage while a secondary spring-loaded oil seal provides double protection against water and loss of grease. Cast nickel-chrome alloy stationary and rotating shredding elements provide long life and corrosion resistance and are designed for reverse-action grinding. Feature overload protection and stainless steel grind chamber.

COMMERCIAL MOUNTING ADAPTERS

Use to mount commercial food waste disposer to sink.

1WXD7

Grease and Lint Interceptors

Endura models have 1-pc. plastic tank with an airtight silicone seal, easy-to-open latching system, and an innovative removable baffle design. 40D985 and 40D986 have a removable dual-screen filtration system with coarse and fine screens. Watts models are epoxy-coated steel with removable baffle and deep seal trap with cleanout. Recessed or floor mounted. Zurn grease interceptors have a Dura-Coated steel body, flow diffusing baffle, integral trap, and external vented inlet flow control. The Lint Interceptor 38UK34 separates out solids such as buttons, lint, stones, and string, and can handle up to 3 washing machines. Unit features an acid-resistant coated interior and exterior, a nonskid secured cover with removable lift handle, aluminum lint intercepting secondary screen assembly, and permanent primary straining baffle with ⅜" dia. perforated holes. Model has a high inlet and low outlet.

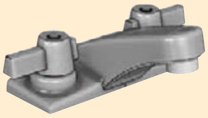
Faucet Spout Shapes



Low-Arc—Short spout sits close to sink basin and reduces splashing.

Mid-Arc—Taller than low-arc-spout with a curve under spout with space for filling bigger vessels.

Straight—Spout extends straight out from faucet body.

Angled Straight—Spout extends straight out and points down into the sink at an angle.

Gooseneck—Tallest spout extends high above counter and curves to point directly into sink.

Single-Hole Deck-Mount Bathroom Faucets

Faucets install into one hole on a flat surface such as a sink or counter. Chrome finish.

Metering-Handle Deck-Mount Bathroom Faucets

Metering handles allow users to push handle down to activate the faucet. No gripping required allowing those with limited mobility to operate faucet. Handle controls the start of water flow, but not the duration. Water flow shuts off automatically to save water in public or high-traffic restrooms. Deck-mount installs on a flat surface such as a sink or counter. Chrome finish. ADA Compliant.

Gooseneck-Spout Sensor Single-Hole Wall-Mount Bathroom Faucets

Hands-free sensor eliminates the spread of germs and starts/stops water flow without touching faucet. Tall gooseneck-spout extends above counter and curves to point straight down into sink. Single wall-mount hole installation saves counter space. Chrome finish. ADA Compliant.

Sensor Two-Hole Deck-Mount Centerset Bathroom Faucets

Hands-free touchless sensor controls the flow of water and stops the spread of germs. Water shuts off automatically after a preset time to save water costs. Presetting water temperature is required. Two-hole centerset deck-mount faucets install onto sinks that have two centered holes that are 4" apart when measured from center-of-hole to center-of-hole. Chrome finish. ADA Compliant.

Automatic Hand Soap Dispensers

Hands-free automatic counter dispensers release a premeasured amount of hand soap to help prevent waste. Infrared sensors detect the presence of hands so users don't have to touch the handle or dispenser opening.

Two-Hole Centerset Kitchen Sink Faucets

Faucets install onto kitchen sinks that have two centered holes that are 4" apart when measured from center-of-hole to center-of-hole. They can cover an unused middle hole on sinks with a three-hole centerset pattern. These one-piece units have a spout and one or two handles on a single base. Deck mount, except 26Y192 is wall mount. Chrome finish.

For information on faucet spout shapes, see page 2733.

Single-Hole Wall-Mount Glass Fillers

Glass fillers install into one hole on a vertical surface such as a wall. They provide a narrow stream of water for filling drinking glasses or water bottles. Straight-spout faucets extend straight out from the body of the faucet. Glass-activated push lever handles except 26Y282 is metering requiring users to push to start, shuts off automatically. Chrome finish.

Bradley MOEN POWERS American Standard ZURN SPEAKMAN

Shower Faucets

- ½ in connection

Faucets include fixed and/or handheld showerheads, attachment hardware, faucet control handles, and matching trim. Components are interchangeable without altering the behind-the-wall plumbing. All showerheads are single function, except 22LU07, which is dual function. For a complete list of standards, go to Grainger.com and search for individual products.

American Standard—One-piece cartridge simplifies installation and maintenance.

Bradley—Adjustable showerhead for a 25° to 30° spray angle.

Moen—Install 4ZF99 with Posi-Temp Pressure Balancing Control Valve to maintain water temperature control in the shower. 52RR02 has an adjustable temperature limit stop.

Powers—Thermostatic valves respond almost instantly to dramatic pressure changes. Self-contained cartridge simplifies maintenance and repair.

Speakman—Have chrome-plated, 4-arm handles with color-coded indexes. Reversible valve body and ¼-turn ceramic cartridges. Galvanized gooseneck with support strap.

Zurn—Feature two service stops/check stops and adjustable limit stop.

Fixed Showerheads

- ½" connection

Wall-mount showerheads are typically smaller (less than 5"-dia.) in size and include a single-function, dual-function, or multi-function spray face or nozzle for adjusting spray patterns. They are commonly found in residences, hotels/motels, and behavioral facilities. For a complete list of standards, go to Grainger.com and search for individual products.

American Standard—3KTD7 and 6NWE4 turbine spray have a flow rate of 1.5 gpm, which can reduce water use by up to 40%.

Chicago Faucets—Solid brass construction with chrome-plated finish.

Danze—Feature easy-glide selector ring.

Moen—Nonmetallic spray face and shell with a brass swivel ball assembly.

Sloan—Feature spring-loaded spray disk to prevent particle clogging. 5E548 and 4FEZ4 have a thumbscrew volume control. 5E547 features an adjustable spray direction and mounting plate with vandal-resistant screws.

Speakman—The pressure-compensating plunger system helps optimize low water pressure for more efficient performance.

Zurn—6RKG7 and 6RKH2 are self-cleaning. 6RKH2 adds a flow compensator to maintain a constant flow rate.

Handheld Showerheads

- ½" connection

Showerheads can remain fixed in mounting bracket or be removed for use while standing or sitting. A flexible hose allows the showerhead to move freely and direct water to hard-to-clean areas. Used to customize showers in residences, schools, and factory locker rooms. For a complete list of standards, go to Grainger.com and search for individual products.

American Standard—Pause feature on handle reduces flow to a trickle. 448N46 turbine spray has a flow rate of 1.5 gpm, which can reduce water use by up to 40%.

Encore—Models feature an eco-friendly design.

Ez-Flo—Includes a 59" stainless steel hose.

Grohe—Feature SpeedClean anti-lime system.

Kohler—493J03 and 493J04 feature an intense drenching spray that delivers a forceful spray. 493J05 and 493J06 spray face resists hard water buildup for easy cleaning.

Moen—Showerheads are vandal-resistant.

Speakman—49AJ94–49AJ97 feature 147 sprays and 5 spray patterns. 455F01–455F03 feature spray-adjusting Anystream technology.

Shower Stall, Panels, and Bases

Shower Stall is a prefabricated, ready-to-install unit that includes walls, floor, showerhead, faucet, and curtain. It can be fully enclosed with an optional glass door. Commonly found in residences, motels/hotels, and school, gym, or factory locker rooms. **Shower Faucet Panels** replace existing showerheads with one oversized panel. They are often used to retrofit existing showers and include valves, showerheads, water outlets, and volume controls. **Shower Bases** are the floors that fit inside shower wall panels. Drain included. 6NWU7 is ADA compliant and meets ASME and ANSI standards.

Hookless®
Patent 5,186,232

Hookless Shower Curtains

Innovative Flex-On rings allow shower curtain installation or removal in less than 1 min. Polyester material is water-repellent with ultrasonic bottom hem. PEVA material is an alternative to traditional vinyl and manufactured without chlorine. RePET material is made from recycled drinking water bottles.

NEOPERL®

Faucet Aerators & Outlets

- OEM quality

Connect to the end of a faucet spout to direct the water stream, minimize splashing in sink basins, and reduce water use. These parts are added to faucets for flow-control applications and used as replacements for aerators that block water flow, cause the water stream to sputter, or allow dripping from the spout.

Unthreaded Faucet Aerator Inserts and Flow Restrictors—Easily fit into faucet spouts.

Threaded Faucet Aerators and Flow Restrictors—Thread onto faucet spouts.

Faucet Outlet Adapters—Allow the faucet spout to be fitted with different types of aerators and adapted to suit different applications.

Faucet Aerator Installation Tools—Aid in the installation and removal of clogged faucet aerators. Tools fit a compatible aerator and faucet without causing damage.

Bedpan Washing Systems

- ADA compliant with vandal-resistant stop cap, except American Standard

Sloan has exposed diaphragm-type, closet flush valve for floor-mount or wall-hung bowls with a 1½" top spud. All have 1-pc. body to keep spray arm upright. Include valve body, stop body, diverter body, and diverter pivot, except American Standard has no valve. For information on standards, go to Grainger.com.

Automatic Flush Valves

American Standard—Touchless Sensor models have a chrome finish and a proximity sensor for hygienic hands-free operation with mechanical override. Self-cleaning piston helps prevent clogging and reduces maintenance. Range and flush volume can be adjusted manually or with Remote Control 24X050, sold separately on Grainger.com.

Sloan—Sensor-activated with exposed, diaphragm-type flushing system. 3-sec. delay. Courtesy Flush override button on toilet type only.

Zurn—Include actuator, control stop, internal seals, piston kit, sensor, and vacuum breaker.

Automatic Flush Valves

SLOAN

- 11½" rough-in

For information on standards, go to Grainger.com.

ECOS/G2—Install exposed, battery-powered, sensor-operated flush valves on floor-mounted or wall-hung top spud bowls to help meet ADA requirements. Features include 3-sec. flush delay, manual override button, unit reset, and unit shutdown. 3-yr. warranty. Urinal models have courtesy flush 24 hr. after last flushing cycle. Full units include valve body, tailpiece, and control stop.

SOLIS—Automatic, sensor-operated flush valves use photovoltaic technology to convert just about any natural or artificial light source into power; no need for electricity. Include LED low-battery indicator, instructional wall plates, vandal-resistant stop cap, and manual override.

2VEF7

Dual Flush Retrofit Kit 2VEF9

Dual-Flush—Detect user presence and duration to determine more-efficient effective flush volume—reduced cycle for liquid waste; full cycle for solid waste. Split-button design allows manual activation of either cycle. Include control module, flex tube diaphragm, installation strap wrench, screwdriver device, and 2 instructional wall plates.

Retrofit Kits—Top mount kits fit all Sloan valve assemblies and do not include valve body, tailpiece, or control stop. They allow a flushometer to be converted from manual to automatic operation for hands-free flushing. Include a full diaphragm assembly.

SLOAN ZURN American Standard

Automatic Side-Mount Flush Valves

Toilet 2VEH8

- 11½" rough-in

Battery powered valves can be used with floor-mounted or wall-hung top and spud bowls. Suitable for left- or right-hand supply; include valve body, tailpiece, control stop, and 4 C batteries. User-friendly 3-sec. delay. 5-yr. manufacturer's warranty, except Zurn models are 3 yr. only. ADA compliant when properly installed. All models meet ASSE 1037, ANSI/ ASME A112.19.2, except Zurn models.

Manual Piston-Type Flush Valves

16T981

- Recommended operating pressure: 20 psi (flowing), 80 psi (static)
- 11½" rough-in

Feature self-cleaning brass piston with integral wiper spring that helps prevent clogging and reduce maintenance. Nonhold-open handle, chloramine-resistant EPDM seals. Valves include sweat solder kit, cover tube, and wall flange. ADA compliant.

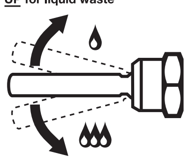
Royal Flush Valve



Dual-Flush Handle 2XU39

Manual Flush Valves

SLOAN

Exposed valves have free-spinning, vandal-resistant stop caps. Integral vacuum breaker helps prevent back siphoning. ADA-compliant oscillating, nonhold-open handles and an adjustable tailpiece. For information on standards, go to Grainger.com.

Manual Dual Flush Valves and Dual Flush Valve Handle—Handle converts existing flush valves to water-conserving units that allow either full or partial flushes: lift handle for liquid waste; push down for solid waste. Handle has a green-colored antimicrobial coating. Include 2 instructional wallplates.

Automatic Flush Valve Retrofit Kits

ADA compliant, except for 448N68 and 448N69. All include 4 C batteries and installation tools.

Side-Mount—Install without water shutoff. Adjustable sensor range. 24-hr. courtesy flush option. Valve body, supply stop, or vacuum breaker not included, except 20CM32 comes with a valve body. 448N68 is for Sloan and Zurn flush valves. 448N69 is for American Standard and GEM flush valves.

2TET9, 2TEU1, and 1GAB3 allow you to slide the unit over the flush valve handle and tighten for fast installation. 1GAB3 has a true mechanical override.

Top-Mount—40D676 is all-metal construction with easy battery access. 25CH56 has a chrome-plated plastic E-Z Flush sensor unit with 3-yr. battery life.

Elongated Tankless Toilets

For Toilet Seats, see page 2758.

- White vitreous china

Tankless toilets draw on high-pressure water supplies to deliver forceful flushing in a single flush. They work with a flush valve (flushometer) sold separately, see Grainger.com that connects directly to wall or floor plumbing line. High-pressure flush reduces water use and reduces chance of clogs or backups. Tankless toilets have a louder flush, but refill faster and cleaner.

Wall-Mount with Top Spud and Back Outlet—Top spud works with exposed flush valve for unblocked access. Back outlet connects to wall waste line.

Wall-Mount with Back Spud and Back Outlet—Back spud works with a concealed flush valve to prevent tampering. Back outlet connects to wall waste line.

Floor-Mount with Top Spud & Bottom Outlet—Top spud connects to flushometer and has unblocked access during maintenance. Bottom outlet connects to floor waste line.

Wall-Mount Tankless Toilet Kits with Flush Valve & Top Spud, Back Outlet Bowl—Flushometer sits atop rear rim of bowl for unblocked access. Top spud connects to the flush valve and back outlet connects to wall waste line.

Floor-Mount Tankless Toilet Kits with Flush Valve & Top Spud, Bottom Outlet Bowl—Flushometer sits atop rear rim of bowl for unblocked access. Top spud connects to the flush valve and bottom outlet connects to floor waste line.

Elongated Gravity Toilet Bowls and Tanks

- White vitreous china

Toilets draw water from their attached tank to supply a quieter, low-pressure flush in low-traffic settings (20 to 30 flushes per day). These fixtures rely on gravity to move water from the tank into the toilet bowl for flushing. Separate bowl-and-tank design allows components to be replaced individually during installation and maintenance.

Floor-Mount Toilet Bowls—Toilet bowls pair with a gravity tank to form a two-piece toilet. These fixtures fasten to the floor for stability and have mounting holes for attaching a tank.

Gravity Toilet Tanks—Tanks pair with a gravity-style bowl to form a two-piece toilet. These fixtures house the flushing mechanism and other working parts of the toilet. They have mounting holes for attaching a bowl and a cover for keeping dust and debris out of the tank.

Pressure-Assist Elongated Toilets and Tanks

- White vitreous china

Toilets provide a strong flush like tankless toilets without requiring a high-pressure water supply. They're typically used in high-traffic settings where water pressure is too low for a tankless toilet. These fixtures have a pressure vessel within their water tank that pressurizes air and releases it with the water for a high-powered flush.

Floor-Mount Toilet Bowls with Back Outlet—Back outlet fastens to the floor and has a back connection to a wall waste line.

Floor-Mount Toilet Bowls with Bottom Outlet—Bottom outlet fastens to the floor and has a bottom connection to a floor waste line.

Toilet Tanks—House the pressure vessel, flushing mechanism, and other working parts of the toilet. These fixtures have mounting holes for attaching to a pressure-assist toilet bowl. Cover keeps dust and debris out of the tank.

SLOAN. FLUSHMATE®

Flushmate System

52VG57

Pressurized flush eliminates double flush and clogs and saves water. Fewer moving parts extends service. If toilet tank includes a flush handle, Handle Replacement Kit 30KE38 is also required. Flush Cartridge 1ATP5 is a replacement part for most Flushmate systems.

Note: Flushmate system is not sold as a retrofit component for a gravity-fed toilet.

Intelli-Flush 2VRN9—Enables touchless, electronic sensor operation of existing Flushmate units to reduce the spread of bacteria and recurring odors. Include wall-mounted sensor, flush module, battery pack, batteries, override button, and chrome trim.

Toilet Seats

Bolt onto a toilet bowl and can be lifted on their hinges for cleaning and full access to the bowl. Oval or circular rings should match the bowl shape to keep the seat stable. Use seats on new installs or for replacement.

Standard Elongated—Elongated (oval) seats are about 2" longer from back to front than standard round bowls.

Standard Round—Fit round toilet bowls and are generally more comfortable for smaller users.

Elongated Lift—Taller than standard elongated seats to make it easier for people to lower and lift themselves off toilet. Assists people with mobility issues.

Child—Smaller seats and typically found in schools, pediatric hospitals, and daycare facilities.

Elongated Safety-Arm—Elongated (oval) seats with support arms for people to lift or lower themselves when using the toilet. Arms attach to underside of seat and extend from sides to provide grab bars for lifting and balance. Used in rehab facilities, hospitals, nursing homes, and senior-living centers.

Round Lift—Taller than standard round seats to help people get on and off the toilet. Designed to assist people with mobility issues.

Oversized Toilet Seats for Round or Elongated Bowls—Universal fit with a higher weight capacity to support heavy users. The wider-than-standard surface area fits any bowl shape. Commonly used on toilets for bariatric patients in hospitals and medical facilities.

Urinals

- White vitreous china
- Flush valve sold separately, see Grainger.com

Wall-mount flush-valve urinals with top spud are off-the-floor fixtures that allow thorough cleaning, connect to a wall waste line, and work with an exposed flush valve for unblocked access during maintenance. These fixtures have a lower weight capacity than floor-mounted fixtures, but provide a streamlined look and full access for cleaning the floor and urinal surfaces. Includes back opening for waste line and a spud atop the fixture for connecting to a flush valve (flushometer). Meet all ANSI and ASME water conservation requirements.

Wall-Mount Waterless Urinals

Conserve water by eliminating liquid waste without flushing. They connect to a wall waste line and rely on gravity to direct urine into the drain, so there's no need for a flushing mechanism. These water-free urinals use a trap or cartridge with a layer of sealant that blocks odors from rising out of a waste line while allowing urine to pass through. Use to reduce water consumption in dry climates and other areas where water is scarce. WaterSense Certified.

Prison and Ligature-Resistant Toilet and Sink Combination Units

49T884

- For institutional showerheads, go to Grainger.com

Ligature-resistant sinks, toilets, and urinals withstand damage and prevent vandalism, abuse, or potential for self-harm or suicide in correctional and mental health facilities where antiligature or security products are needed. Sinks have push-button controls that provide hot and cold water at 0.5 gpm, and a penal bubbler. Metering valves can be set for 5- to 60-sec. operation and cannot be held open. These specialized toilets and urinals include enclosed flush valves, so they can't be used to tie off cords or fabric strips.

Ligature Resistant Bathroom Faucets

38C415

Cone-spout faucets are shaped like a rounded triangle, or cone. Their shape makes it difficult to use the faucets as a ligature point or a point of self-harm, making them suitable for hospitals, prisons, and mental health settings. These dual-metering-handle two-hole centerset deck-mount faucets have two handles that users push down on to start the flow of water. Each handle is operated separately to control the hot and cold water supplies. Metering-handle faucets let users control the start of the flow of water but not the duration, as the water flow shuts off automatically. Chrome faucet finish.

Partition Hardware Packages and Accessories

Packages include all brackets and fasteners needed to assemble partition components. Fasteners are Torx head screws that require a T25 Torx Power Bit, sold separately on Grainger.com. For Toilet Partition Folding Shelf, order 4WMJ7 on page 2760. No Sight Kit 5JME1 helps block the sight line between the door and pilasters of the compartment for added privacy.

REPLACEMENT SHOES

Replace damaged trim shoes without dismantling the entire compartment.

Acoustical Ceiling Tiles

Armstrong CEILING SYSTEMS

- White color

A variety of edge types and surface textures to help you create the look you want. All tiles are durable, sag resistant, and have a Flame Spread Index 25 or less. Smoke Developed Index 50 or less. Include a 30-yr. limited system warranty against visible sag, mold/mildew, and bacterial growth (excludes Fissured, Cortega, and Designer products). Mineral fiber construction, except 32WN11 is ceramic, mineral fiber and 6EJL6 and 5UTN3 are fiberglass. All tiles have Class A Fire resistance, according to ASTM E84 and CAN/ULC S102 surface burning characteristics.

Fine Fissured—Provide excellent sag resistance.

Fine Fissured Second Look—Feature an innovative look where the panel is scored to look like a 2 ft. x 2 ft. panel. Compatible with standard suspension systems.

Fissured—Economical panels come with a directional, fissured visual offers standard acoustics.

Dune and Dune Second Look—Nondirectional appearance helps reduce installation time. Durable, scratch-resistant surface.

Cirrus—Offer a medium-textured appearance with excellent noise reduction, sag resistance, high light reflectance, antimicrobial treatment, and no added formaldehyde.

Cirrus Profiles - Classic Step—Medium-textured appearance with edge details carved into the panels. Compatible with standard suspension systems.

Ultima—Offer excellent noise reduction, sag resistance, high light reflectance, antimicrobial treatment, and no added formaldehyde, in a high-impact, scratch-resistant, washable, and scrubbable tile.

Georgian High Washability and Clean Room VL—Unperforated Class 5 (Class 100) tiles offer high wash and scrubbability, and soil resistance. Impact and scratch resistant. Meet USDA/FSIS guidelines for food processing areas.

Ceramaguard—Nondirectional, smooth texture and resistant to chemical fumes. For high-moisture locations including shower areas and indoor parking garages.

Clean Room FL—Unperforated Class 5 (Class 100) tiles feature high scrubbability and washability plus impact, scratch, and soil resistance. Meet USDA/FSIS guidelines in food processing areas.

Kitchen Zone—Easy-to-clean panels feature up to 20% more light reflectance than vinyl-covered gypsum. The smooth surface meets USDA/FSIS guidelines in food processing areas.

Suspension Systems—SuperLock clips allow fast and secure connections with accurate alignment. Rotary stitching adds strength. PeakForm profile increases strength and grid stability. Meet seismic requirements when installed according to ICC ESR-1308.

Irrigation/ Sprinkler Timer 4KEA1

Electronic Hose End Timer 38W346

Impact Sprinkler Head 5Z285

Pop-Up Rotor Sprinkler Head 4JY64

RAIN BIRD

Professional Underground Sprinkler Systems

Timers and Sensor—Use 4KEA1 to adjust watering schedule for each area and the flow rate of each sprinkler. Has an auto rain shutoff to stop operation during rain, and easily linked to existing drip watering systems. 38W346 has easy-to-use controls, a LCD, and battery backup. 2EMF1 is adjustable to varying amounts of rainfall.

Valves—Use antisiphon valves in above-ground applications. Feature an adjustable flow control and help prevent wasteful misting when water pressure is too high. Use automatic in-line valves in pump systems where backflow protection is already inst alled.

Pop-Up Gear-Driven Rotors and Nozzles—Design protects the easily adjustable rotors from dirt and debris. Mount on riser 1YHC6 to clear tall shrubs.

Pop-Up Spray Heads with Nozzles—The 4", 6", and 12" 1800 Series spray heads are efficient at low pressures.

Plastic Cam and Groove Fittings

Consist of a two-part system with a nipple (adapter) and coupler (sold separately) that connect or disconnect pipe, tubing, or hose without tools.

Polypropylene—Lightweight thermoplastic material resists UV, weathering, corrosion, and ozone damage. Commonly used with treated water, corrosive solvents, and chemicals.

Nylon—Fittings resists corrosion and changes in humidity, withstand higher temperatures than polypropylene, and won't scratch delicate surfaces.

Glass-Filled Polypropylene—Uses glass fibers for extra reinforcement. This combination adds stability and strength to resist UV, weathering, and corrosion.

Dust Caps and Plugs—Seal leaks and prevent debris or other materials from entering the connection.

Metal Cam and Groove Fittings

These fittings are hose couplings that connect or disconnect pipe, tubing, or hose without tools. Also known as camlock couplings, they consist of a grooved male adapter and a female cam that tighten together to form a seal.

304 and 316 Stainless Steel—Withstands pressure and high temperatures and resists corrosion when handling caustic chemicals, and other potentially corrosive fluids, oils, and gases.

Aluminum—Lightweight and corrosion-resistant, aluminum is more susceptible to scratches and wear unless alloyed with other metals for strength. Commonly used with water, chemicals, hydraulic oil, and petroleum products.

Forged Brass—Compatible with copper or zinc piping and maintains its durability at high temperatures, is highly conductive, and resists corrosion. Commonly used with water, coolants, gasolines, hydraulic oils, and petroleum products.

Dust Caps and Plugs—Seal leaks and prevent debris or other materials from entering the connection.

Cam and Groove Gaskets

- Pkg qty. 1, except Nitrile Black Gaskets are 10

Flat cam and groove gaskets fit in the grooves of the female camlock or cam and groove couplings. The pressure of the fitting pushes against the gasket to create a tight seal.

Black Steel & Iron Pipe & Pipe Nipples, Schedule 40, 80 & 160

BECK

*Grainger's product supplier has certified that products marked "Made in USA" comply with "Made in USA" requirements in accordance with FTC rules and guidance.

- **MNPT connection**

Uncoated black steel, also called black malleable iron, is made from corrosion-resistant ungalvanized steel and includes a scaly, dark-colored iron oxide coating on the surface. Pipe connects with fittings to transport gas and water, protect electrical wiring, or deliver high-pressure steam and air. Threaded connections use PTFE tape to secure seal.

SCHEDULE 40: Low-pressure (100-299 psi). Used in low-pressure plumbing applications including air, water, oil, natural gas, and steam.

Black Steel & Iron Pipe & Pipe Nipples, Schedule 40, 80 & 160

SCHEDULE 160: High-pressure (1000-3000 psi). Used in noncorrosive environments, they have the thickest walls compared to pipe with lower schedule numbers.

Black Steel & Iron Pipe Nipple Assortments, Schedule 40

- NPT connection
- Welded construction
- Low-pressure (100-299 psi)

Schedule 40 pipe nipples have thicker walls than Schedule 10, but not as thick as Schedule 80.

Threaded Uncoated Black Steel & Iron Pipe Fittings, Class 125, 150, 300 & 3000

- Tees read: run x run x outlet

Connect to black steel and black iron pipe for transporting gas and water, protecting electrical wiring, or delivering high-pressure steam and air. Also called black malleable iron fittings, they are made from corrosion-resistant ungalvanized steel with a scaly, dark-colored iron oxide coating. Used in piping systems to change direction or connect to equipment or devices. Threaded fittings twist onto pipe using various male and female thread connections.

CLASS 125: Low pressure (100-299 psi). Designed for use in fire protection applications.

Threaded Uncoated Black Steel & Iron Pipe Fittings, Class 125, 150, 300 & 3000

ANVIL INTERNATIONAL Building Connections That Last

CLASS 300: Medium- to high-pressure (300-3000 psi). Features thicker walls that can withstand higher pressures than class 150 fittings.

Threaded Uncoated Black Steel & Iron Pipe Fittings, Class 125, 150, 300 & 3000

CLASS 3000: Medium- to high-pressure (300-3000 psi). For use with water and oil in chemical, petrochemical, pulp, paper, shipbuilding, waste incineration, and semiconductor industry applications.

Description	Fitting Pipe Size	Pipe Fitting Connection Type	Pipe Fitting Material	Approved Vendor Item No.	Anvil Item No.

Socket Weld Uncoated Black Steel & Iron Pipe Fittings, Class 3000 & 6000

- Female connections

Connect with pipe to transport natural or propane gas, water, steam, and air to residential, construction, and manufacturing applications. Fittings attach by inserting pipe into the recessed area of the fitting. Pipe and the fitting are square cut for easy fillet welding and installation. These fittings are welded to the same thickness as unthreaded pipe. They are also known as black malleable iron and are made from corrosion-resistant ungalvanized steel with a scaly, dark-colored iron oxide coating.

Class 3000 medium- to high-pressure: (300-3000 psi). Ideal for petrochemical, pulp, paper, and shipbuilding applications.

Butt Weld Uncoated Black Steel & Iron Pipe Fittings, Class Standard & Extra Strong

Class standard (STD) high to extreme pressure pipe fittings connect with pipe to transport natural or propane gas, water, steam, and air to residential, construction, and manufacturing applications. They form pipe joints with strength, fatigue, corrosion resistance, and temperature compliance. These beveled fittings are welded to the ends of same thickness pipe. Fittings are made from corrosion-resistant ungalvanized steel with a scaly, dark-colored iron oxide coating. **Class extra strong XS** fittings connect with high- to extreme pressure (1000-3001+ psi) pipe, and are based on the original 1927 standard that uses wall thickness and weight, and are the same as Schedule 40S and identical to Schedule 40 for NPS ⅛ to NPS 10.

Uncoated Black Steel & Iron Pipe Flanges

Flanges connect with pipe and fittings to form a piping system that transports natural or propane gas, water, steam, and air to residential, construction, and manufacturing applications. Flanges provide easy access for cleaning, inspection, and modification. They are also called black malleable iron flanges and are made from corrosion-resistant ungalvanized steel with a scaly, dark-colored iron oxide coating.

Blind Flanges also called blank flanges, seal the end of piping systems or pressure vessel openings to test the flow of a gas or liquid. They typically have a raised, flat, or RTJ (ring-type joint) face.

Butt Weld Flanges also called welded neck flanges, attach by welding the pipe to the neck of the flange, transferring stress from the flange and the hub's base to the pipe. The inside diameter of the flange matches the pipe's inside diameter. Butt weld flanges typically have a RTJ (ring-type joint) face.

Lap Joint Flanges are most commonly used with stub end fittings and slide directly over the pipe. The pipe is welded to the stub end, allowing the lap joint flange to rotate freely around the stub end and eliminating issues with bolt-hole alignment.

Slip-On Flanges typically have raised or flat faces, that slip over pipe. They are manufactured with an inside diameter slightly bigger than the pipe's outside diameter. The pipe slides through the flange and is welded on both sides.

Socket Weld Flanges (SW) flanges attach to pipe by inserting the pipe into the socket end of the flange and applying a fillet weld around the flange/pipe. This weld creates a smoother bore and better flow of fluid or gas inside the pipe. These flanges typically have a raised, flat, or RTJ (ring-type joint) face.

Threaded Flanges also called screwed flanges, connect to the external threads on a pipe without welding. Threaded pipe flanges typically have a raised, flat, or RTJ (ring-type joint) face.

XS Flanges Class Extra Strong (XS) are based on the original 1927 standard that uses wall thickness and weight. Class XS is the same as Schedule 80S which is identical to Schedule 80 for NPS ⅛ to NPS 8.

Class 150 low pressure: (100-299 psi). For use with air, water, oil, natural gas, or steam.

Zinc Galvanized Pipe & Pipe Nipples, Schedule 40, 80 and 160

- MNPT connection

* Grainger's product supplier has certified that products marked "Made in USA" comply with "Made in USA" requirements in accordance with FTC rules and guidance.

Pipe and pipe nipples are thick-walled steel dipped in a protective zinc coating to resist rust, corrosion, and mineral buildup, and withstand wet conditions.

SCHEDULE 40: Low-pressure (100-299 psi). For air, water, oil, natural gas, and steam applications.

Zinc Galvanized Pipe Nipple Assortments, Class 40

- NPT connection
- Welded construction
- Low-pressure (100-299 psi)

Schedule 40 pipe nipples have thicker walls than Schedule 10, but not as thick as Schedule 80.

Threaded Zinc Galvanized Steel Pipe Fittings, Class 150, 300 & 3000

These fittings are thick-walled steel dipped in a protective zinc coating to resist rust, corrosion, and mineral buildup, and withstand wet conditions.

CLASS 150: Medium-pressure (300-999 psi). For air, natural gas, oil, potable water, and steam applications.

Compression Zinc Galvanized Steel Pipe Fittings

- EPDM seal
- Max. steam pressure: 125 psi

Temporarily repair new or existing pipelines for transporting oil, water, gas, and other liquids for chemical, waste incineration, and semiconductor industry applications. Includes metal friction rings and iron nuts. Fittings do not require soldering or gluing, but are not as resistant to vibration as soldered or welded fittings. Thick-walled steel dipped in a protective zinc coating resists rust, corrosion, and mineral buildup, and withstand wet conditions.

1RLW6

Pipe Size	Pipe Fitting Connection Type	Overall Length	Item No.
½"	IPS and CTS	3¹⁵⁄₁₆"	**1RLW6**
¾"	IPS and CTS	4"	**1RLW7**
1"	IPS and CTS	4⅜"	**1RLW8**

ANVIL INTERNATIONAL Building Connections That Last

Zinc Galvanized Steel Pipe Flanges, Class 125, 150 & 300

- FNPT connections

These screwed flanges include threads inside the flange bore that connect to the external threads on a pipe without welding. They typically have a raised, flat, or RTJ (ring-type joint) face. Flanges transport oil, water, gas, and other liquids for chemical, waste incineration, and semiconductor industry applications. Thick-walled steel is dipped in a protective zinc coating to resist rust, corrosion, and mineral buildup, and withstand wet conditions.

CLASS 125: Low-pressure (100-299 psi). For air, non-potable water, and oil applications.

Grooved Ductile Iron Pipe Fittings, Clamps & Flanges, Class 150

- Ductile iron material
- Max. operating pressure: 300 psi @ 150° F, except end caps are 1000 psi
- Orange color
- Tees read: run x run x outlet

Fittings and flanges are commonly used in rigid pipe systems, above-ground pipe installations, and in tight spaces including subfloors, crawl spaces, trenches, and tunnels. Grooved ductile iron is lighter, stronger, and more durable than cast iron. Iron absorbs vibration, handles stress without breaking, and works with water, diluted acids, alkali solutions, oil-free air, and other chemicals.

Grooved fittings combine roll-grooving and two-bolt coupling designs in a joint that resists external forces without special supports or expansion joints, and help maintain secure seals under both positive pressure and vacuum conditions. Grooved connection.

Threaded outlet pipe clamps are grooved and fit around pipe lengths similar to a saddle. They include a branch outlet that maintains a leaktight seal under both positive pressure and vacuum conditions. Grooved x grooved x NPT connection.

Grooved flanges provide easy access for cleaning, inspection, and modification. Flanged x grooved connection.

Ductile-Iron Gaskets and Lubricants

Gasket material properties as designated in accordance with ASTM D2000.

Note: EPDM Gaskets not for use in petroleum applications.

Gaskets—EPDM Grade EP gaskets are for use with alkalies, dilute acids, salts, and water. Not for use with gases, hydrocarbons, and oils. **Nitrile Grade T** gaskets are for use with mineral oils, petroleum products, vegetable oils, and air contaminated with petroleum oils. Not for use in hot water applications. NSF Certified.

Silicone Lubricants—Waterproof and remain effective at extreme temperatures. Permit pipe ends to reposition themselves. Nontoxic and not petroleum based.

Size	EPDM, Grade EP, Temp. Range: -40° to 250°F Item No.	Nitrile, Grade T, Temp. Range: -20° to 180°F Item No.

Ductile-Iron Grooved Butterfly Valves

- Max. pressure: 300 psi
- Temp. range: -40° to 230°F

Corrosion-resistant stainless steel stems have a secondary seal that provides a lifetime lubrication chamber. With EPDM liner and 4 bolt holes.

Note: Not for use in petroleum applications.

Lever-Operated—Have lever handles; maintain a constant leaktight stem seal regardless of disc position. Meet MSS SP-67, except 3DVX7, 3DVY3, and 3DVY4 are UL Listed and FM Approved.

Gear-Operated—With 2 internal switches: 1 is wired for supervisory service; the other is for use as an auxiliary switch. Switches are rated for 11A at 125/150VAC; 0.5A at 125VDC; 0.25A at 250VDC. UL Listed; FM Approved.

Stainless Steel Pipe & Pipe Nipples, Schedule 40 & 80

- MNPT connection

Type 304 stainless steel resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils. Pipe connects with fittings to transport air, water, natural gas, steam, and chemicals to storage tanks and in residential plumbing, and kitchen and food applications. **Type 316 stainless steel** has a higher nickel content than 304 stainless for greater corrosion resistance from caustic chemicals, corrosive fluids, oils, and gases, and withstands pressure and high temperatures. Pipe connects with fittings to transport air, water, natural gas, steam and chemicals in chemical manufacturing, industrial and chemical transportation, and food production and processing.

SCHEDULE 40: Low-pressure (100-299 psi). For air, natural gas, propane, steam, and water applications.

Threaded Stainless Steel Pipe Fittings, Class 150, 3000 & Extreme Pressure

Parker

- Class 150 max. pressure: 300 psi

Fittings resist corrosion from caustic chemicals, corrosive fluids, oils, and gases, and withstand pressure and high temperatures in plumbing applications and food and dairy processing. Threaded pipe fittings are threaded on both connection ends and use PTFE tape to keep seal tight. **Type 304 stainless steel** resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils. **Type 316 stainless steel** has a higher nickel content than 304 stainless for even greater corrosion resistance. **Extreme pressure instrumentation** fittings are precision machined and threaded on both connection ends for leak-free connections between fittings, instrumentation, and pipe.

CLASS 150: Medium-pressure (300-999 psi). For air, natural gas, non-potable water, oil, potable water, and steam applications.

Socket Weld Stainless Steel Pipe Fittings, Class 150 & 3000

- Female connections

Socket weld (SW) fittings attach by inserting pipe into the recessed area of the fitting. Pipe and the fitting are square cut for easy fillet welding and installation.

Type 304 stainless steel resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils.

Type 316 stainless steel has a higher nickel content than 304 stainless for greater corrosion resistance that resists corrosion from caustic chemicals, corrosive fluids, oils, and gases, and withstands pressure and high temperatures.

CLASS 150: Medium-pressure (300-399 psi). For plumbing or welding applications with air, water, natural gas, or steam.

Stainless Steel Pipe Flanges, Class 150 & 300

Flanges allow easy access for cleaning, inspection, and modification. **Raised face** flanges bolt onto pipes without needing welding. **Slip-on** flanges slip over pipe and are manufactured with an inside diameter slightly bigger than the pipe's outside diameter. The pipe slides through the flange and is welded on both sides. **Socket weld** flanges attach to pipe by inserting the pipe into the socket end of the flange and applying a fillet weld around the flange/pipe. **Blind** flanges, also called blank flanges, seal the end of piping systems or pressure vessel openings to test the flow of a gas or liquid. **Butt weld** flanges, also called welded neck flanges, attach by welding the pipe to the neck of the flange, transferring stress from the flange and the hub's base to the pipe. **Lap joint** flanges are most commonly used with stub end fittings and slide directly over the pipe. The pipe is welded to the stub end, allowing the lap joint flange to rotate freely around the stub end and eliminating issues with bolt-hole alignment. **Type 304 stainless steel** resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils. **Type 316 stainless steel** has a higher nickel content than 304 stainless for even greater corrosion resistance.

CLASS 150: Low-pressure 100-299 psi. For use with air, water, oil, natural gas, and steam applications.

Sanitary Stainless Steel Butterfly Valves

53CT94

- Max. pressure: 145 psi
- Temp. range: 15° to 266°F

Feature 32 Ra I.D. surface finish, silicon seats, and clamp-style connection.

Sanitary Stainless Steel 2-Way Ball Valves

11A421

- Temp. range: -65° to 320°F

Design allows for unrestricted flow through valve. Can be serviced without complete removal from line. 316 stainless steel construction with PTFE seats. 20 Ra I.D. finish. Full port style. Blowout-proof stem. Pad lockable handle is AISI-304 stainless steel. Seats in compliance with FDA Regulations.

Sanitary Gaskets

Rubber Fab
a Garlock Hygienic Technologies company

Tri-Clamp—Gaskets are used to seal clamp connections in sanitary pipe lines. For use in the beverage, biotech, dairy, food, pharmaceutical, and other sanitary process applications. Buna N material does not meet USP Class VI and is not ADI free.

Tri-Clamp Detectomer Metal Detectable/X-Ray Inspectable—Allow metal and x-ray detection equipment to instantly locate and reject products contaminated with displaced gasket material.

Bevel Seat—Designed for use in sanitary piping systems in the beverage, dairy, food, and pharmaceutical industries.

Tri-Clamp Screen—Help eliminate particulates to protect fill and finish sterile products, spray balls, and spray nozzles.

Orifice Plate—Allow flow rate adjustment, backflow balance, and back pressure equalization during sterilizing in place (SIP) procedures.

I-Line—Designed for use in sanitary piping systems in the beverage, dairy, food, and pharmaceutical industries.

Tuf-Flex—Innovative unitized gasket has high standards for flexibility, performance, and purity. Specifically designed for critical requirements in biotechnology, pharmaceutical, ultrapure water, and WFI (water-for-injection) applications.

Sock Screen—Extended sock-shaped mesh gaskets are inserted into the inside of stainless steel tubing and provide filtration for a greater soil retention. Offer up to 300% more open area for 300% more soil collection capability than conventional screens.

Brass & Bronze Pipe & Pipe Nipples, Schedule 40, 80 & Instrumentation

Parker

Fully Threaded Low-Lead Pipe is precision machined for leak-free connections between pipe and fittings.

Brass is strong, highly conductive, maintains machineability at high temperatures, and resists corrosion from water, heat, acids, minerals, and peaty soils. It's compatible with stainless steel, copper, or zinc piping. **Bronze** is a metal alloy of copper and tin and resists corrosion from saltwater and has higher heat and electric conductivity than most metals. Pipe and nipples connect with pipe fittings to transport air, drinking water, flammable gases, slurries, and chemicals in plumbing applications for residential and commercial buildings. Threaded connections use PTFE tape to secure seal.

SCHEDULE 40: Low-pressure (100-299 psi). Schedule 40 pipe and nipples have thicker walls than Schedule 10, but not as thick as Schedule 80. Low-lead items are rated for use with drinking water.

Brass & Bronze Pipe & Pipe Nipples, Schedule 40, 80 & Instrumentation

Parker

SCHEDULE 40: Low-pressure (100-299 psi). Schedule 40 pipe and nipples have thicker walls than Schedule 10, but not as thick as Schedule 80. Low-lead items are rated for use with drinking water.

Threaded Brass & Bronze Pipe Fittings, Class 125 & High-Pressure

Parker

- Tees read: run x run x outlet

These fittings connect with pipe to transport air, drinking water, flammable gases, slurries, and chemicals in residential and industrial plumbing applications. They resist corrosion from water, heat, saltwater, acids, minerals, and soils. Connections use PTFE tape to secure seal.

LOW-LEAD CLASS 125: Low-pressure (100-299 psi). For use with air, water, natural gas, and steam in commercial and residential buildings and are rated for use with drinking water.

Compression Brass Pipe Fittings

- Rubber seal

Fittings temporarily repair two new or existing pipelines to transport air, drinking water, flammable gases, slurries, and chemicals in residential and industrial plumbing applications. They include an outer compression nut and an inner compression ring or ferrule (sometimes called an olive), usually made from brass or copper. Ferrules vary in shape, but most commonly are the shape of a ring with beveled edges. Brass, an alloy of copper and zinc, is strong, highly conductive, maintains machineability at high temperatures, and resists corrosion from water, heat, acids, minerals, and peaty soils. It is also compatible with stainless steel, copper, or zinc piping.

21TF15

Fitting Pipe Size	Overall Length	Item No.
¾" x ½"	3 21⁄25"	21TF18
¾" x ¾"	3 49⁄50"	21TF15
1" x 1"	3 93⁄100"	21TF16
1¼" x 1¼"	3 93⁄100"	21TF17

Brass & Bronze Pipe Flanges

- Pipe fitting material: red brass
- Maximum operating pressure: 125 psi
- FNPT connection

Flanges connect with pipe and fittings to form a piping system that transports air, flammable gases, slurries, and chemicals in plumbing applications. Flanges allow breaks in pipelines to make valve, pump, and other replacements. Brass, an alloy of copper and zinc, is compatible with stainless steel, copper, or zinc piping. It is strong, highly conductive, maintains machineability at high temperatures, and resists corrosion from water, heat, acids, minerals, and peaty soils. Bronze, also known as red brass, is a metal alloy of copper and tin and resists corrosion from saltwater and has higher heat and electric conductivity than most metals.

Cast Copper and Bronze Fittings

- Temp. range: -20° to 400°F, except 1WLH5 to 1WJL1 are 0° to 400°F and 36N483 is 40° to 100°F

Feature higher pressure ratings than most wrot copper fittings. Approved Vendor models are compatible with wrot copper fittings. All models are for use in nondrinking water and air applications. Meet ANSI B16.18, except 36N483 to 36N559 meet ASME B16.26.

Copper Press Tools and PEX Press Jaws

RIDGID

Use to securely join Type K, L, or M copper tubing, with no flames, solder, or flux. Designed for ½" to 4" applications, with interchangeable jaws and rings. For use with potable and chilled water, hydronic heating, compressed air, and air vacuum (29.2" Hg max. at 68°F).

Compact Cordless Press Tool Kits—Compact and lightweight for tight spaces and overhead work, these press tools feature Bluetooth® connectivity to manage information such as battery life and cycle count. The handy LED light is ideal for low light conditions and the battery can provide up to 140 crimps per charge. Barrel swivels 180°. The included carrying case eases transport to and from the jobsite.

Press Tool Kit and Press Tool—Durable brushless motor is capable of over 100,000 press cycles. Features Bluetooth connectivity, color-coded light indicators for easy operation, and bright LED light for low light applications. Barrel swivels 360°. Includes carrying case.

Pressing Ring Kits—Use with battery-powered or corded pressing tools to connect copper tubing in tight spaces; a swivel actuator allows the tool to be oriented ±90° to the tubing.

Viega MegaPress Jaws Kits—34TC11 and 34TC10 include ½" to 1" press jaws and a carrying case, 34TC10 adds 1¼ " to 2" press rings and actuator.

Press Tool Accessories—Press Tool Pipe Cutter Attachment 5KAY4 eases cutting of cast-iron soil pipe. Simply connect unit to press tool, wrap chain around the pipe, and press. No ratcheting or additional tools required. Compatible with all Ridgid standard press tools.

PEX Press Jaws—Designed for use with Viega® system fittings. Compact jaws are ⅓ smaller than Standard models and are for use in tight spaces.

Copper Viega ProPress Fittings

viega

- Max. pressure: 200 psi; tested to 600 psi
- Temp. range: 0° to 250°F

ProPress offers a quick, flameless, environmentally friendly way to join standard K, L, or M copper tubing with Viega Smart Connect feature, and to identify unpressed fittings. No flux, solder, or gas required. Use with copper press tools, sold separately on page 2800. For compliance and standards information, go to Grainger.com.

Viega MegaPress Stainless Steel Fittings

viega

- Max. pressure: 200 psi
- Temp. range: 0° to 250°F

Provide clean, flameless connections that can withstand high temperatures, pressures, and corrosive cleaning materials. System allows you to make secure, consistent connections without diminishing the pipe wall by threading. Suitable for use from potable water in commercial projects to corrosive chemicals in industrial applications. Meet ASTM A312/A403, IAPMO, ICC, NSF/ANSI 372, and TSSA/ASME B31.1/B31.3/B31.9.

Viega MegaPressG Carbon Steel Press Fittings

- Max. pressure: 125 psi
- Temp. range: -40° to 180°F

Install fittings without completely shutting down the system and reduce installation time by up to 60% with no threading or cutting oils. Fittings include the Viega Smart Connect® feature and a durable hydrogenated nitrile butadiene rubber (HNBR) seal that resists chemicals, heat, and oil. Can be installed with ASTM A53 Schedule 5 to Schedule 40 black iron pipe. Suitable for use in compressed air, and in fuel oil and natural gas applications. Meet ANSI LC4/CSA 6.32, IAPMO, ICC, IFGC, NFPA 54 and 58.

Viega MegaPress Carbon Steel Fittings

- Max. pressure: 200 psi
- Temp. range: 0° to 250°F

Can reduce installation time up to 60% compared to welded connections. Fittings use cold press technology with no risk of smoke/fire, and connections are not contaminated with thread cutting oil or metal filings. Ideal for black, painted, and powder-coated pipe (seamless and welded). Have a durable corrosion-resistant, zinc-nickel coating and are ideal for repair or expansion of steel pipe installations. Meet FM, IAPMO, ICC, NFPA 13, 13D and 13R, TSSA/ASME B31.1/B31.3/B31.9, and UL Listed.

ZURN WILKINS OETIKER®

Lead-Free PEX Crimp Fittings

- Max. pressure: 80 psi, except PEX Ball Valves are 160 psi at 73°F, 100 psi at 180°F, and 80 psi at 200°F
- Temp. range: 33° to 200°F
- Fittings are Zurn brand, except 40PR09, 40PR11, and 40PR12 are Oetiker brand

Easily install without flame, flux, or solder. Require no bonding agents, glue, or solvents. Fittings resist corrosion, mineral buildup, rust, and freeze damage. Suitable for new or retrofit construction and for hot or cold water distribution. Clamps 40PR09, 40PR11, and 40PR12 feature a narrow band for more concentrated compression and have a tamper-detectable design. 40PR09 and 40PR12 hold in place while crimped to ease installation. Fittings are certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com and search for individual products.

ZURN WILKINS OETIKER®

Manual PEX Tools and PEX Manifolds

10A633

MANUAL PEX TOOLS

52DD79 to 52DD83 meet ASTM F1807.

10A618 and 10A619 apply the correct pressure to create a leak-free crimp connection. Use with annealed copper crimp rings, Qick/Sert1 or QickSert CR fittings, and Zurn PEX tubing.

10A622 is used to make a copper crimp ring connection. For use with 1¼", 1½", and 2" Zurn PEX copper crimp rings on Zurn PEX DZR and Zurn PEX XL insert fittings.

40PR13 and 40PR14 used with ear clamps will not release until the clamp is fully closed to help ensure a leak-free connection.

QUICK PORT MANIFOLDS

- Max. working pressure: 100 psi
- Temp. range: 33° to 200°F

Use to supply different fixtures from a main line and feature controllable water distribution, increased water flow, and no inline below-floor fittings. Certified for use in potable water applications. Meet ASTM F877 F1807.

Lead-Free Push-Fit DZR Brass Fittings

- Max. pressure: 200 psi
- Max. temp.: 200°F, except 19F918 is 150°F, 49EL56 and 49EL58 are 250°F

Push-fit connection requires no clamps, glue, soldering, tools, or unions to help ease installation. Use with hydronic heating and potable water; approved for underground and behind-wall systems without access panels. For residential and commercial whole-house installations, water heater repairs, and sillcock or water filter replacement. Certified for use in potable water applications.

** Connects Polybutylene Pipe to CPVC, PEX or Copper.*

Push-Fit Accessories

Allow you to easily install and disassemble SharkBite fittings and valves without the need for glue, solder, or clamping. For a complete list of standards and specifications, go to Grainger.com and search for individual products.

DISCONNECT CLIPS AND DISCONNECT TONGS

High-density plastic clips and stainless steel tongs for removal and installation of SharkBite fittings and valves.

PEX STIFFENERS

Help to stiffen PEX tubing for an easier push-fit connection.

DEBURRING TOOL

Use to smooth the rough edges on cut pipe and can also be used to mark pipes for accurate installation.

26-PC. PUSH FIT KIT

Comes with commonly used push-fit fittings and tools. See the full list of kit contents on Grainger.com.

Lead-Free Instant Push-Fit Brass Ball Valves

- Max. pressure: 200 psi CWP
- Max. temp.: 200°F

Easy-to-install connection requires no clamps, glue, soldering, tools, or unions. Lead-free brass stem and ball, and EPDM seals. Certified for use in potable water applications. Meet cUPC, UPC, IAMPO, and IPC; except 49EL59 meets ASSE 1061 and is NSF 61 Certified.

Lead-Free Compression and Push-Fit Brass Supply Stops

- Max. pressure: 200 psi
- Temp. range: 40° to 180°F, except Connectors are 0° to 200°F, and Tee Stop Valves are 32° to 200°F

Require no clamps, glue, or soldering; can be rotated after assembly to ease installation in tight spaces. Easy to disconnect. Use with flexible service lines and fixtures such as dishwashers, faucets, icemakers, toilets, etc. Certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com and search for individual products.

JG *Super Speedfit*®

CTS Twist-and-Lock Fittings

- Max. pressure: 160 psi
- Max. temp.: 200°F

Create a leakproof connection with copper, CPVC, and PEX tubing. Toolless installation is good in tight spaces. Suitable for cold and hot water distribution, potable water distribution, and hydronic heating systems. Meet ASSE 1061, 1GC 188; ASTM F876, F877; ICC; NSF/ANSI 14; UPC; and are CSA B137-5 Certified.

PVC Pipe & Pipe Nipples, Schedule 40 & 80

Polyvinyl chloride, or PVC, is a strong thermoplastic that resists ultraviolet (UV) light, acids, alkalis, oils, and many corrosive inorganic chemicals, making it resistant to the corrosive effects of sewage. Lightweight and nonflammable with good electrical insulation properties, and its smooth interior walls resist scaling. Connect with pipe fittings to transport potable water, corrosive liquids, and sewage in industrial and commercial applications. Threaded pipe use PTFE tape to secure seal. **Schedule 40 pipe** has thicker walls than Schedule 10, but not as thick as Schedule 80 pipe. **Schedule 80 pipe** has thicker walls than Schedule 40, but not as thick as Schedule 160 pipe.

SCHEDULE 40: Low-pressure (100-299 psi). For lower pressure, cold water applications.

Schedule 80 Threaded on Both Ends 6MV87

PVC Pressure Pipe Fittings, Schedule 40

- White color
- Tees read: run x run x outlet

Polyvinyl chloride, or PVC, pipe fittings connect with pipe to transport potable water, corrosive liquids, and sewage in industrial and commercial applications, in irrigation and other outdoor cold water applications. PVC is a strong thermoplastic that resists ultraviolet (UV), acids, alkalis, oils, and many corrosive inorganic chemicals, making it resistant to the corrosive effects of sewage. Lightweight PVC is nonflammable with good electrical insulation properties, and its smooth interior walls resist scaling. Threaded connections use PTFE tape to secure seal.

Threaded x threaded—These fittings are threaded on all connection ends.

Socket x threaded—Include one socket (hub or slip) end and one threaded end. Socket ends require glue or adhesive to secure connection.

Spigot x threaded—Fittings include one spigot (or street) end and a threaded end. The spigot end connects to another fitting and requires glue or adhesive for a secure seal.

Spigot x spigot— Include spigots on both ends to fit inside sockets on other fittings. Spigots require glue or adhesive to secure the connection. Spigot ends are needed when a fitting connects to another fitting.

Socket x spigot—These fittings include a socket (hub or slip) end that fits over a pipe and a spigot (also known as street) end that fits inside a socket. Fittings require glue or adhesive to secure the connection.

Socket x socket—These fittings, also called slip or hub fittings, include socket ends on all fitting connection ends. The socket ends fit over the end of a PVC pipe and require glue or adhesive to secure the connection.

Schedule 40 Clear Pipe & Fittings

- Temp. range: 73° to 180°F, except caps are 0° to 140°F

Clear PVC pipe is used for quick identification and visual leak detection in medical/hospital use, chemical processing, and beverage processing. Compatible with PVC cleaners, primers, and cements. Schedule 40 pipe has thicker walls than Schedule 10, but not as thick as Schedule 80 pipe.

PVC Drain, Waste & Vent Pipe Fittings, Schedule DWV & 40

- White color
- Tees read: run x run x outlet

Convey effluent streams with gravity, such as black water or gray water waste. Lightweight PVC is nonflammable with good electrical insulation, and its smooth interior walls resist scaling. Not for use in pressure applications.

Socket x socket—Also called slip or hub fittings, the socket ends fit over the end of a PVC pipe and require glue or adhesive to secure the connection.

Socket x spigot—Include socket (hub or slip) end that fits over a pipe and a spigot (also known as street) end that fits inside a socket. Use glue or adhesive to secure the connection.

Spigot x threaded—A spigot end connects to another fitting and requires solvent cement to seal connection. Threaded connections use PTFE tape to secure seal.

Threaded x threaded—Threaded on all connection ends. Use PTFE tape to secure seal.

Spigot x threaded—Spigot end connects to another fitting, and requires solvent cement to seal connection. Threaded ends use PTFE tape to secure seal.

Spigot x spigot—Fit inside sockets on other fttings. Spigots require solvent cement to seal connections.

Socket x socket—Socket ends fit over the ends of pipe and require glue or adhesive to secure the connection.

Socket x threaded—Socket ends require glue or adhesive to secure connection. Threaded ends use PTFE tape to secure seal.

SCHEDULE DWV: Thinner walls are not intended for pressure applications.

PVC Pressure Pipe Fittings & Flanges, Schedule 80

- Gray color, except compression couplings are white
- Tees read: run x run x outlet

Schedule 80 fittings have thicker walls than Schedule 40, but not as thick as Schedule 100 and are suitable for use in water processing and in water treatment. PVC is a strong thermoplastic that resists ultraviolet (UV), acids, alkalis, oils, and many corrosive inorganic chemicals, making it resistant to the corrosive effects of sewage. Lightweight PVC is nonflammable with good electrical insulation properties, and its smooth interior walls resist scaling. Threaded connections use PTFE tape to secure seal.

Threaded x threaded—Threaded on all connection ends.

Socket x threaded—Include one socket (hub or slip) end and one threaded end. Socket ends require glue or adhesive to secure connection.

Spigot x threaded—Include one spigot (or street) end and a threaded end. The spigot end connects to another fitting and requires glue or adhesive for a secure seal.

Socket x spigot—These fittings include a socket (hub or slip) end that fits over a pipe and a spigot (also known as street end) that fits inside a socket. The spigot end is needed when a fitting connects to another fitting. Fittings require glue or adhesive to secure the connection.

Socket x socket—Also called slip or hub fittings, the socket ends fit over the end of a PVC pipe and require glue or adhesive to secure the connection.

Compression x compression—Temporarily repair new or existing pipelines and include metal friction rings, iron nuts, and rubber gaskets. They do not require soldering or gluing, but are not as resistant to vibration as soldered or welded fittings.

Threaded x threaded flanges—Threaded on all connection ends.

Blind flanges—They seal the end of piping systems or pressure vessel openings. These flanges help test the flow of gas or liquid through a pipe. Blind flanges typically have a raised, flat, or RTJ (ring-type joint) face.

Socket x socket flanges—Also called slip or hub fittings, the socket ends fit over the end of a PVC pipe and require glue or adhesive to secure the connection.

Spigot x spigot flanges—Include spigots, also called street ends, on both ends to fit inside sockets on other fittings. Require glue or adhesive to secure the connection.

PVC Irrigation Insert Pipe Fittings, Schedule 40

- Temp. range: 32° to 140°F
- Gray color, except 22FM91 Make Adapter is white
- Tees read: run x run x outlet

Fittings work in cold water applications where the fluid temperature does not exceed 140°F. They are for low-pressure use in irrigation, pools, pumps, wells, and other outdoor cold water applications. Not intended for hot or cold systems within residences or buildings, or for use with compressed air or gases. Fittings insert inside flexible polyethylene tubing and secure with worm drive clamps (sold separately on page 2532). PVC is a strong thermoplastic that resists ultraviolet (UV), acids, alkalis, oils, and many corrosive inorganic chemicals, making it resistant to the corrosive effects of sewage.

Insert x insert are barbed or inserted on both ends. **Insert x threaded** are barbed or inserted on one end with threading on the other end. **Insert x socket** are barbed or inserted on one end with a socket on the other end. The socket end, also called a hub or slip end, fits over the end of a pipe and requires glue or adhesive to seal connection.

CPVC Pipe & Pipe Nipples, Schedule 80

- Low-pressure (100-299 psi)
- Medium-pressure (300-999 psi)

Nontoxic CPVC (chlorinated polyvinyl chloride) is a lightweight, strong, rigid thermoplastic material that resists corrosion, chemicals, and rust. CPVC is immune to damage from highly chlorinated water and resists most acids, aliphatic solutions, bases, halogens, oxidants, and salts. Thicker walls than Schedule 40, but not as thick as Schedule 160, it is used to transport potable water, corrosive liquids, and sewage. Use PTFE tape to secure seal.

CPVC Pressure Pipe Fittings & Flanges, Schedule 80

- Gray color
- Flanges max. operating pressure: 150 psi
- Tees read: run x run x outlet

Nontoxic CPVC (chlorinated polyvinyl chloride) pipe fittings and flanges are pressure rated to transport potable water, corrosive liquids, and sewage. CPVC is a strong, rigid thermoplastic material that resists corrosion, chemicals, and rust.

Threaded fittings—Threaded on all connection ends, and use PTFE tape to secure seal.

Socket fittings—Ends fit over the end of pipe and require glue or adhesive to secure the connection.

Socket x spigot fittings—Include a socket (hub or slip) end that fits over a pipe and a spigot (also known as street) end that fits inside a socket. The spigot end is necessary when a fitting connects to another fitting (not directly to a pipe). These fittings require glue or adhesive to secure the connection.

Socket x threaded fittings—Threaded connections use PTFE tape to secure seal. Socket ends require glue or adhesive to secure connection.

Threaded flanges—Used with pipes that have external threads, so a welded connection is not required. Flanges have a raised face, flat face, or RTJ (ring-type joint) facing, and are often used for small diameter, high pressure requirements.

Blind flanges—Commonly used for testing the flow of gas or liquid through a pipe or vessel by blocking off a section of the pipe that is not used. They typically have a raised, flat, or RTJ (ring-type joint) face.

Socket flanges—Slip over pipe and secure using solvent cement. There are two types of socket, or slip, flanges. One-piece flanges are solid molded parts and once glued to pipeline cannot be turned. The Van Stone flange is a two-piece flange with a rotating ring that makes bolt alignment simple. This flange has one female threaded end that connects to a male threaded fitting or nipple.

Spigot flanges—Fit into a CPVC or PVC fitting. The spigot (also known as street end) fits inside a flange fitting. The spigot end is necessary when a fitting connects to another fitting (not directly to a pipe). These fittings require glue or adhesive to secure the connection.

ABS Drain, Waste & Vent Pipe and Fittings, Schedule 40

- Black color

Drain, waste, and vent (DWV) systems convey effluent streams, such as black water or gray water waste. ABS (acrylonitrile butadiene styrene) is an opaque thermoplastic polymer with high tensile strength and low temperature properties. The smooth interior walls resist physical impact, chemical corrosion, and scaling. Not for use in pressure applications.

Threaded x threaded—Threaded on all connection ends. Female threads are on the inside of a fitting. Male threads are on the outside of a fitting and screw into the female threads. Use PTFE tape to secure seal.

Threaded x spigot—Threaded connections use PTFE tape to secure seal. Spigot fittings connect to another fitting (not directly to a pipe), and require glue or adhesive to secure the connection.

Socket x threaded—Have at least one threaded end and one socket (hub or slip) fitting end. Female threads are on the inside of a fitting. Male threads are on the outside of a fitting and screw into the female threads. Threaded connections use PTFE tape to secure seal.

Socket x socket— Include socket ends on all fitting connection ends. The socket ends fit over the end of an ABS pipe and require glue or adhesive to secure the connection.

Socket x spigot—Fittings include a socket (hub or slip) end that fits over a pipe and a spigot (also known as street end) that fits inside a socket. The spigot end is needed when a fitting connects to another fitting (not directly to a pipe). Use glue or adhesive to seal the connection.

Pipe - 10 ft, Unthreaded

Polypropylene Pipe & Pipe Nipples, Schedule 40 & 80

ORION

- Low-pressure (100-299 psi)
- Medium-pressure (300-999 psi)

Polypropylene (PP) is a lightweight, thermoplastic polymer offering impact strength, surface hardness, and abrasion resistance. It resists a variety of acids, alkalis, and solvent solutions. PP pipe and nipples connect with pipe fittings to divert, divide, or return the flow of liquids and chemicals in fertilizer, herbicide, insecticide, wastewater, saltwater, and HVAC applications.

Schedule 40 Pipe has thicker walls than Schedule 10, but not as thick as Schedule 80 pipe.

Schedule 80 Pipe has thicker walls than Schedule 40, but not as thick as Schedule 160 pipe.

Schedule 80 Pipe Nipples have thicker walls than Schedule 40, but not as thick as Schedule 160. These connections use PTFE tape to secure seal.

SCHEDULE 40: For use with acids, air, bases, DWV, natural gas, non-potable water, oil, propane, solvents, and water.

Polypropylene Pressure Pipe Fittings & Flanges, Schedule 80

- Black color

Fittings and flanges connect with pipe to transport water and chemicals in fertilizer, herbicide, insecticide, wastewater, saltwater, and HVAC applications. Threaded connections use PTFE tape to secure seal.

Threaded x threaded—Threaded on all connection ends.

Blind flanges—Seal the end of piping systems or pressure vessel openings. These flanges, also called blank flanges, help test the flow of gas or liquid through a pipe. They typically have a raised, flat, or RTJ (ring-type joint) face.

Threaded flanges—Tapered threaded flanges, also called screwed flanges, are used with pipes that have external threads. These flanges have a raised face, flat face, or RTJ (ring-type joint) facing, and are often used for high-pressure requirements.

Threaded x Threaded Pipe Fittings, Temp. Range: -20° to 150° F

Bulkhead Tank Fittings

Temp. Ranges:

- 316 Stainless Steel and Banjo Polypropylene: -20° to 150°F
- CPVC: 40° to 190°F
- PVC: 40° to 140°F
- Polypropylene: 40° to 180°F

Use as an inlet or outlet for valves, pipes, tanks, and totes. Each fitting consists of a body, gasket, and locking nut with wrench flats. Feature left hand threads to ease installation and are available in short and long pattern designs. Max. pressure: 150 psi.

Polyvinylidene Pipe Nipples, Schedule 80

- MNPT connection
- Medium-pressure (300-999 psi)
- Red color

Polyvinylidene fluoride, or PVDF, is a high-purity thermoplastic that resists chemicals, abrasions, salts, and heat, and is ultraviolet (UV) stable for outdoor use. Pipe nipples connect with pipe fittings and are frequently used in the semiconductor industry. Schedule 80 pipe nipples have thicker walls than Schedule 40, but not as thick as Schedule 160. Connections use PTFE tape to secure seal. Pipe nipples connect with fittings.

Polyvinylidene Pressure Pipe Fittings & Flanges, Schedule 80

- Temp. range: 73° to 280°F
- Fittings max. operating pressure: 1,360 psi @ 73° F

Polyvinylidene, or PVDF, fittings and flanges connect with pipe to divert, divide, or return the flow of liquids and chemicals in chemical plant, pharmaceutical, medical, and food processing applications. PVDF resists salts, strong acids, dilute bases, and organic solvents, and is ultraviolet (UV) stable for outdoor use.

Threaded x threaded—Connections use PTFE tape to secure seal.

Socket x socket—Fittings connect to pipe. Also called slip or hub fittings, include socket ends on all fitting connection ends. The socket ends fit over the end of an PVDF pipe and require glue or adhesive to secure the connection.

Socket x threaded—Include one socket (hub or slip) fitting end and one threaded end, and require adhesive to secure connection. Threaded connections use PTFE tape to secure seal.

Spigot x socket—Include a spigot (also known as street end) that fits inside a socket (hub or slip) end that fits over a pipe. The spigot end is necessary when a fitting connects to another fitting (not directly to a pipe). These fittings require adhesive to secure the connection.

Blind flanges—Also called blank flanges, seal the end of piping systems or pressure vessel openings. They are used for testing the flow of gas or liquid through a pipe or vessel by blocking off a section of the pipe that is not used.

Butt weld flanges—Also called welded neck flanges, attach by welding the pipe to the neck of the flange, transferring stress from both the flange and the hub's base to the pipe. The inside diameter of the flange matches the inside diameter of the pipe. Butt weld flanges typically have a RTJ (ring-type joint) face.

WATTS REGULATOR

Lead-Free Dielectric Unions & Flanges

- Polysulfone insulator material

Pipe fittings for dissimilar materials allow incompatible materials to be joined together safely, and provide insulation between two different materials to avoid electrolysis that leads to corrosion and pipe failure.

Plastic to Metal Transition Fittings, Schedule 40, 80 & SDR-11

- Metal side NPT, except 5UED7 and 5UED8 are compression

Fittings minimize any stress problems found with metal-to-plastic piping system transitions when connecting heat exchangers, flow meters, and other metal-ended, male-threaded instruments. They are also used when expanding old metal systems with plastic, or installing new plastic systems where metal is required for part of the installation.

SCHEDULE 40: Schedule 40 CPVC has thicker walls than Schedule 10, but not as thick as Schedule 80.

Solvent Cement Can Opener 415C76

Christy's E-Z WELD Oatey WELD-ON

Solvent Cements and Cleaners

Application temp.: 32° to 110°F, (pipe cleaners and purple primers are -10° to 110°F). All meet max. VOC limits SCAQMD method 1168-316A or BAAQMD method 40. For a complete list of standards and specifications, go to Grainger.com and search for individual products.

WARNING: These cements and cleaners are extremely flammable; handle and use them in accordance with manufacturer's instructions.

ROOT-BAN DRAIN PIPE ADHESIVE

Bonds pipe connections with a strong, flexible, and leakproof seal that inhibits root intrusion. For use on HDPE, polyethylene, polypropylene, and styrene drain pipe up to 6" dia. Not for use on pressurized piping systems.

SOLVENT CEMENT, RED HOT BLUE GLUE

45RF96 to 45RF98 are a fast-setting, pipe cement for flexible and rigid PVC plastic pipe and fittings in potable water, conduit, drain duct, DWV, and sewer in both pressure or non-pressure applications. Suitable for use in dry, humid, or wet conditions.

738 HOT 'N FAST, 3NZW7 AND 3NZW8

For use in wet and dry conditions when quick pressurization is desired.

P-70 PRIMER, 6KWU4, 6KWU5, AND 6KWU6

Premium industrial-strength primer for use on Schedule 80 and larger pipe sizes. Excellent in cold weather applications.

Sealant, Pipe Dope, and Plumber's Putty

Note: POLY-TEMP and SLICKON are registered trademarks of Anti-Seize Technology.

Gasket Sealant—Forms a flexible seal which will not harden, crack, crumble, or shrink.

Leak Detector—For use on pressurized plumbing and gas lines.

Megaloc Thread Sealant—Will not harden, crack or become brittle; requires no cure time. Max. pressure: 12,000 psi (liquid).

AST-PPD Plumber's Pipe Dope—Nontoxic, no lead or silicone. Use with all metal pipe and valves. Max. pressure: 1000 psi (gas); 2000 psi (liquid).

Pipe Thread Sealant (Hercules)—Won't harden or separate. Nonflammable and requires no cure time. Max pressure: 12,000 psi (liquid).

SLICKON GTS GOLD Sealant w/ PTFE—Nontoxic, noncuring, solvent-free paste is suitable for use with potable water. FBC System compatible.

SOF-SET Pipe Sealant—Use on metal, PVC, and ABS pipe for water, steam, LP and natural gas, refrigerants, ammonia, fuel oils, and hydraulic oil. Max. pressure: 10,000 psi (liquid); 2600 psi (gas).

TFE Pipe Thread Sealant w/ PTFE—Meets FDA requirements. NSF registered and UL Classified for fire protection sprinkler systems. Max. pressure: 10,000 psi (liquid); 2000 psi (gas).

TUF-SET Pipe Thread Sealant—Sets firm; resists vibration, shock, and thermal expansion; allows disassembly. Nontoxic and corrosion-resistant. Use with potable water, all common refrigerants, natural gas, propane, and gasoline. Max. pressure: 10,000 psi (liquid); 2600 psi (gas).

AST-PUT Plumber's Putty—Mold and mildew resistant. Meets Fed. Spec. TT-P-1536A.

Pro Dope Thread Sealant—For use with air, brine, diluted acids, gas, hydronic heating, natural gas, steam, and sprinkler systems. Max pressure: 250 psi (liquid).

Pipe Thread Sealant Tapes and Valve Stem Packing

For a complete list of standards and specifications, go to Grainger.com and search for individual products.

Low-Density Thread Sealant Tape—Virgin PTFE, compatible with most pipe materials, and forms a permanent seal for the life of the connection.

POLY-TEMP Antiseize Thread Seal Tape—Eases assembly/disassembly of threaded fasteners, connections, and helps prevent seizing and galling. 2TE46 and 2TE47 are non-toxic and for use in food handling applications.

POLY-TEMP Gas Line Sealant Tape—Extra-dense thread sealant for use on most metal or plastic pipe connections.

POLY-TEMP Thread Sealant Tape—2TE52 is for use in sealing and preventing seizing in stainless steel and stainless steel alloy pipe threads.

POLY-TEMP VSP Valve Stem Packing—Inert to most chemicals and withstands vibration and severe corrosion. Can conform to worn stuffing boxes and valve stems. Max. pressure: 500 psi.

Joint Sealant, Thread Sealant, and Valve Stem Packing Tapes

- PTFE material

For a complete list of standards and specifications, go to Grainger.com and search for individual products.

Joint Sealant Tape—General purpose economy grade sealant.

Thread Sealant Tape—21TF29 and 21TF30 are general purpose, economy grade sealant tape. 21TF32, 21TF40, and 21TF41 are for use with stainless steel threads.

A SENSUS COMPANY

Double-Bale and Single-Strap Saddle Clamps

Single-Strap FNPT Outlet 3ETZ3

- Max. pressure: 300 psi
- Max. temp.: 180°F

Use to tap into and tee off of existing pipes; fully entrapped gaskets hold tee tightly in place in the tapped cavity. Wide band spread prevents pipe damage when tightening. Ductile iron body with stainless steel straps. Meet ASTM-A536 and AWWA C800; NSF61 Certified.

Plastic & Rubber Flexible Pipe Fittings

- Clamp material: 300 series stainless steel
- Max. operating pressure: 4.3 psi

Fittings connect pieces of pipe together, with or without a change in direction. They connect same or different sizes of pipes using worm clamps (use cordless No Hub Coupling Drill Driver 5HXN2, sold on page 682), and may divert, divide, or return the flow of air, water, gasoline, and chemicals in the pipe.

Shielded Couplings—Create rigid pipe joints that resist shear forces and a stainless steel band resist degradation from ozone, sunlight, oxidation, sand, snow, and dust. Shield material is made of 300 series stainless steel.

Tap Saddle PVC—Fittings are shaped like a half moon to sit on top or around a sewer pipe for faster, less costly connections.

Specific Fitting Shape	For Nominal Pipe Size	Inside Diameter	Overall Length	Pipe Fitting Material	Number of Clamps included	Item No.

Pneumatic Test Plugs

TEST-TITE IPS CORPORATION CHERNE®

Note: Always block plugs when conducting air tests. Consult manufacturers' safety instructions before installing product.

Cherne Big Mouth Flow-Through Plugs—Feature an interchangeable bypass flange that allows the same plug to be used for different applications. Removable tire valve allows for easy replacement.

Cherne Muni Ball Plug, 53MH31—Has a full bypass so that you can both test and monitor your piping system. Ideal for use in the installation and repair of commercial or residential piping applications, including sanitary and storm sewer pipe systems.

Cherne Test Ball Plug, 53MH28—Model features Rupture Disc design that helps prevent over inflation of the pneumatic plug. For pressure testing and blocking of residential drain, waste, and vent (DWV) systems during installation and repair of municipal infrastructure including storm and sanitary sewer piping systems.

Pow-R Pipe Repair Products

- 2KUT3 to 2KUT5 are EPA-approved for use on drinking water lines
- Gray color

Hand-workable epoxy cures as hard as steel to create permanent, industrial-strength repairs. Simply apply putty, soak wrap, wrap pipe, and tighten for about 15 min. Holds tight, even under water. Kits include gloves and instructions. For use on fluid-bearing pipes made from copper, plastics, PVC, rubber, fiberglass, galvanized, concrete, and more.

Clevis Hangers

Recommended for suspending stationary, noninsulated pipelines.

1RVP4

LIGHT-DUTY

Carbon Steel-Copper Finished (for Copper Pipe)

Comply with Federal Specifications WW-H-171 (Type 12).

Carbon Steel-Zinc Finish

- Max. temp.: 450°F

For steel pipe but better for corrosive environments. Comply with Federal Specification WW-H-171E (Type 12).

Carbon Steel-Plain Finish

- Max. temp.: 650°F

Meet Federal Specifications WW-H-171 (Type 12).

HEAVY-DUTY

Carbon Steel (for Wastewater Pipe)

- Max. temp.: 650°F

Suitable for wastewater applications and where ductile iron or cast-iron pipe is used. Comply with Federal Specifications A-A-1192 (Type 1). WW-H-171-E (Type 1), and MSS-SP-69 (Type 1).

Carbon Steel - Plain Finish

- Max. temp.: 650°F

For steel pipe. Meet A-A-1192A (Type 1), WW-H-171-E (Type 1), ANSI/MSS SP-69, and MSS SP-58 (Type 1).

Carbon Steel-Zinc Finish

- Max. temp.: 450°F

304 Stainless Steel

Meet Federal Specification WW-H-171 (Type 1), MSS SP-58 and SP-69 (Type 1).

DURA-BLOK™

Pipe Support Blocks

1CWH4

15E509

Pyramid 25—Innovative design won't damage roof membranes. No tools or fasteners needed. Handle up to three ½", two ¾", or one 1" pipe or conduit.

Pyramid 50—14-ga. steel top accepts standard strut pipe clamps (not included). Electro-galvanized steel.

Recycled Rubber—100% recycled rubber is UV resistant, won't penetrate roof material, and can accept screw fasteners for securing accessories. Suitable for supporting cable trays, conduits, HVAC ducts, and pipe.

1RUY2

Loop Hangers

Recommended for suspension of stationary noninsulated pipelines. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

304 Stainless Steel—Hex nut (not included) is recommended for use with hanger.

Carbon Steel-Copper Plated—Copper colored for ID purposes. Swivel, adjustable band.

Electro-Galvanized Steel, J-Style—Can be suspended by hanger rod or attached to wall.

Carbon Steel-Zinc Plated Finish—Can be suspended by hanger rod or attached to wall. T-slot in hanger permits side bolt to be installed after pipe installation and setting.

Swivel, Adjustable Band with NFPA Rod Sizes—Manufactured to use the minimum rod size permitted by NFPA for fire sprinkler piping. Electro-galvanized steel. Swivel, adjustable band.

Carbon Steel-Zinc Plated Finish—A retained insert nut helps keep the loop hanger and insert nut together. Swivel, heavy-duty adjustable band. ½" to 2" have rounded edge for use with CPVC.

J-Style, Felt Lined—Help prevent electrolysis when used with copper tubing lines. Felt lining reduces noise in pipes. Electro-galvanized steel.

ZSI

Cush-A-Clamp Strut Clamps

- Temp. range: -50° to 275°F

Clamps absorb shock and vibration; reduce unwanted noise and galvanic corrosion in multiple-line runs. Thermoplastic cushion resists most oils, chemicals, and industrial cleaning compounds. Sizes up to 1⅜" have Controlled Squeeze design, which eliminates over-tightening and rotation.

Superklip 1RUZ3

Tube and Pipe Clamps

SUPERKLIP TUBE AND PIPE CLAMPS

Push the tube into the clamp to close and lock the pipe into place. Fasten with wood screw, dual-threaded screw with or without collar, nail with collar, or ¼" threaded rod. Nonmetallic construction is UV resistant and suitable for outdoor applications. White color.

HAMMER-ON STRAP HANGER CLIPS

Clips support pipe or duct from flange with banding or strapping. Accept strap up to 1¼" wide. 1RVG1 is for pipe runs perpendicular to beam. 1RVG2 is for pipe runs parallel to beam.

ONE PIECE PIPE CLIPS

Use for vertical and horizontal installations. Copper-plated steel construction.

Superfix Cushioned Pipe Clamps

1RVB7

- Temp. range: -58° to 230°F

Use for suspending stationary noninsulated steel and copper pipelines. Innovative hinged design eliminates the need to disassemble the clamp prior to installation. EPDM rubber sleeve provides an average of 20dBA noise reduction. Welded ⅜" cap nut allows easy attachment to threaded rod. Corrosion-resistant electro-galvanized steel construction. Conform with Manufacturers Standardization Society (MSS) SP-58 And SP-69 (Type 12), Fire Rating according to DIN to EN13501-1:E.

Cush-A-Nator Cushioned Clamps

Standard

High Temp.

- Temp. range: -50° to 275°F (Standard)
- Temp. range: -65° to 340°F (High Temp.)

Rugged steel clamps have a durable thermoplastic rubber cushion that resists high heat and provides long life against vibration fatigue. Cushion is self-aligning and has a built-in squeeze control to help provide evenly distributed pressure around the pipe or tube for a secure fit. Clamps include hardware and come with a standard or high temp. elastomer cushion. Meet MSS SP-58 and MSS SP-69 (Type 58).

Pipe Straps

ELECTRO-GALVANIZED STEEL, 1-HOLE/2-HOLE

Recommended for supporting horizontal runs of piping from the face of a structural member. Fastening hole in strap may be above or below pipe.

1CWC8

GALVANIZED STEEL, 2-HOLE

Use to secure CPVC pipe in a horizontal position on the bottom of structural wood beams, or on steel with hanger tab in the upward position. Can also be used as a guide to limit movement of a vertical CPVC pipe with tab in the vertical position.

5P128

HEAVY-DUTY AND COPPER, 2-HOLE

Help secure tubing to walls, studs, etc. and help form a rigid system. ½" to 2" straps are 10 ga.; 2½" to 4" straps are 3 ga. Zinc-plated finish is more corrosion resistant than plain steel; 304 stainless provides better corrosion resistance than zinc-plated. Copper straps sold 5 per pack, all others sold each.

AWWA Pipe Couplings

5ENH2

- Max. pressure: 250 psi
- Temp. range: -20° to 180°F
- Nitrile gasket
- Vacuum rating: 28" Hg

Can join pipes with up to 1.65" of pipe differential using a single flange and gasket. Couplings are heavy cast ductile iron and epoxy coated to resist corrosion. ⅝" bolts. Meet AWWA C219, ANSI A21.11, NSF 61, ASTM A-536, ASTM 633-78.

Pipe Size - Pipe Fitting	No. of Bolts	Fitting Length	Item No.

the right connection

Grip and Wrap-Around Pipe Couplings

Grip-L

Open-Flex

- Max. pressure: 232 psi
- Temp. range: -4° to 212°F, except 452Y10 to 452Y20 are -4° to 180°F
- Vacuum rating: 28" Hg

Join plain-end pipes without special preparation or special tools, and create a leaktight seal. Reusable couplings dampen vibration and handle pipe misalignment. Meet ASTM 1476, TY2, CL2, CL3.

GRIP-L

Couplings create a pull-out resistant seal. Couplings and bolts are 316 stainless steel.

OPEN-FLEX

304SS casing with split gasket design allows coupling to be installed without pipe disassembly. Not pull-out resistant. Couplings are 304 stainless steel, bolts are galvanized steel.

Hanger Plates and Brackets

For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

CEILING OR WALL PLATES

Structural attachments to support hanger rod from a ceiling or wall.

EYE SOCKET ROD HANGER

Structural attachment used to join hanger rod to a structure.

HINGE ROD HANGER PLATE

Hinge type hanger plates are suitable for attachment to ceiling or wood beams.

IRON SIDE BEAM BRACKET

Use for attaching pipe or conduit to steel or wooden beams.

OFFSET EYE SOCKET ROD HANGER

Structural attachments join hanger rods to a structure with full vertical rod adjustment.

SIDE BEAM ROD HANGER

Prethreaded structural attachment fastened to wall or the side of a joist to support hanger rod. Two #43 wood drive screws are necessary for proper support.

1RUR9

1RUY8

Note: Follow fastener manufacturer's recommended shear and pull-out strength when fastening to the structure.

Beam Clamps

nVent CADDY · ANVIL International

Note: Setscrews must be tightened and torqued onto the sloped side of the I-beam.

UNIVERSAL

Structural attachment for top or bottom of metal beams, purlins, channels, or angle iron. Hardened steel setscrew. Max. flange size: ¾". Meet Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69.

C-CLAMPS WITH SETSCREW

Attach to W and M beams. Hardened steel setscrew. Meet Fed. Spec. A-A-1192A (Type 23), WW-H-171-E (Type 23), ANSI/MSS SP-69, and ANSI/MSS SP-58 (Type 23). UL and C-UL Listed. ⅜" size is FM Approved.

C-CLAMPS WITH SETSCREW AND LOCKNUT

For structural attachment to top or bottom of metal beams, purlins, channels, or angle iron. Hardened steel setscrew. Meet Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69. ⅜" size is FM Approved.

WIDE-MOUTH C-CLAMPS

Use under roof installations with bar joist-type construction; or attach to structural shape flanges, with the vertical hanger rod offset from the flange edge.

With Setscrew and Locknut— Max. joist or flange thickness: 1¼", except 4HYG6 to 4HYG9 are 15/16". Meet Fed. Spec. A-A-1192A (Type 19 and 23), WW-H-171-E (Type 23), ANSI/MSS SP-69, ANSI/MSS SP-58 (Type 19 and 23), UL and C-UL Listed, FM Approved; except 4HYG6 to 4HYG9 meet Fed. Spec. A-A-1192A (Type 19), WW-H-171-E (Type 19), ANSI/MSS SP-69, and ANSI/MSS SP-58 (Type 19).

CHANNEL-TO-BEAM

Attaches to beam and supports strut.

MULTIFLANGE

Structural attachment to bottom of purlins and beams to support threaded rod. Swivel feature for sloped roofs. UL Listed for fire protection applications (max. 3" Schedule 40 steel pipe).

PURLIN

Attaches to lower flange of metal beams or purlins with 45° flanges up to 2" long and 90° flanges up to 1½"H. Hardened steel setscrew. Meets Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69.

BEAM CLAMP STRAPS

Retainer straps for universal clamps. Field bend and use jam nut over hanger rod to secure. Add 2" width of flange to determine min. strap length.

Pipe Repair Clamps

Use to repair pipe without dismantling connections and to join pipes without threaded connections. Have 304 stainless steel band and Nitrile gasket.

Redi-Clamp—Use for repairing pinhole leaks, punctures, and splits. Drop-in bolts allow easy installation. Ductile iron lugs and carbon steel nuts and bolts.

Full Circle—Fabricated stainless steel lugs can be installed in tight spaces and may be used to join plain pipe of the same diameter. 304 stainless steel stud bolts. Single-band clamps have 360° gasket seal for support, and a "keeper bar" that helps close clamp during installation. Steel nuts and bolts.

Mounting Rail
2UKW5

ZSI

Weld-Plate and Rail-Mount Vibration Reduction Clamps

- Max. pressure: 1500 psi
- Temp. range: -22° to 194°F

Easy-to-assemble clamps are welded in place or rail mounted to secure hoses, piping, and tubing. Ribs in clamp bore and polypropylene cushioning reduce wear due to vibration, rubbing, and chafing. Meet ASSE standards.

Smooth Bore, Single—Chamfered, smooth core helps to reduce wear and extend the life of hoses.

Single Clamps—Recommended for systems without dynamic loads.

Twin Clamps—Ideal for general-duty applications subject to moderate levels of shock and vibration.

Single Line, Rail-Mount—Use with steel mounting rail 2UKW5 (sold separately) to install multiple clamps side-by-side. Once mounted, clamps can be slid along rail for proper alignment.

Pipe Clamps and Supports BEHRINGER®

Use to secure tubing and pipe, while reducing noise and vibration.

Bolt Plate Mounting—Include a base plate with bolt holes to secure clamp.

Rail Mounting—Can be mounted directly to a single channel using rail nuts.

Weld Plate Mounting—Clamps include weld plate for welding directly to the support structure.

Single and Double Clamps with Santoprene Insert—Smooth bore helps prevent bacteria and debris from collecting; also dampens and absorbs vibration. For high-purity and wash-down applications.

Single Clamps with Polypropylene Insert—Heavy-duty clamps withstand shock and vibration of hydraulic systems up to 5000 psi.

Twin Clamps with Polypropylene Insert—Use to manage multiple lines; withstand shock and vibration of hydraulic systems to 1500 psi.

49AG22

Anti-Corrosion Tube Clamps STAUFF®

- Max. pressure: 2000 psi
- Temp. range: -13° to 194°F

Feature corrosion-resistant 316 stainless steel material with a clamp body that's flame-retardant, UV-stabilized construction. Designed to reduce the effects of pipe corrosion and have drainage channels to aid in water dispersal. Meet API RP 552, NACE SP 0108-2008, dimensional standards to DIN 3015-1, and fully interchangeable.

Safety Spray Shields

- ANSI Class #150

Totally enclose flange for complete spray protection. Shields are UV and chemical resistant. Install with hook-and-loop fasteners and drawstrings.

PTFE

- Max. temp.: 450°F

Constructed of 3-ply multilayered reinforced PTFE-coated glass cloth, PTFE thread, and drawstring. PTFE stiffener lines the inside for additional protection. Include pH indicating patch.

PVC

- Max. temp.: 170°F

Constructed of reinforced yellow polyvinyl chloride cloth, white polyester thread, and drawstring. Include pH indicating patch.

POLYETHYLENE

- Max. temp.: 170°F

Constructed of transparent reinforced polyethylene cloth, white polyethylene thread, and drawstring.

Fiberglass Pipe Insulation

Approved Vendor Pipe Fitting Insulation—Preformed fiberglass insulation for 90° elbows and tees eases installation and provides for greater thermal performance. Includes matching PVC cover. Installs with 1" Pipe Fitting Insulation Tape 6WXE4, sold separately. Use 3" Pipe Insulation Tape 4LFJ3 to seal butt joints. Insulation meets ASTM C547 and C300 Series.

- Application temp. range: 0° to 450°F
- White color

Owens Corning Fiberglas Pipe Insulation—The pressure sensitive adhesive system features a self-sealing flap to ease installation. GREENGUARD Certified.

- 3-ft. lengths
- Service temp. range: 0° to 1000°F
- White color jacket

Owens Corning ASJ Max Fiberglas Pipe Insulation—Cleanable, encapsulated paper jacket doesn't support mildew or mold growth. Jacket resists moisture during intermittent, short duration precipitation exposure during installation (with joints sealed per installation guidelines). SSL Max closure system provides a tight, reliable seal without glue or staples. Certified by SCS Global Services to contain a minimum of 53% recycled glass content, 31% pre-consumer and 22% post-consumer. GREENGUARD Gold Certified. Meets UL 723, ASTM E84, and CAN/ULC S-102, ASTM C547, and ASTM C1136, Types I – IV.

- 3-ft. lengths
- Service temp. range: 0° to 1000°F (with heat-up schedule)
- White color

Owens Corning 3"-Wide Pipe Insulation Tape—Seals end joints and completes the closure systems.

- Service temp. range: 25° to 110°F (ambient)
- Service temp. range: -20° to 150°F
- White color jacket

Fiberglass Pipe Insulated Fitting Covers and Insulated Jacketing

- White color

Easily fit around pipe to create a protective barrier. Suitable for indoor or outdoor use on chilled water, hot water, steam and other piping systems in commercial, industrial, and institutional applications. Insulated Fitting Covers, when combined with Insulated Jacketing and PVC solvent cement (sold on page 2822), can form a sealed system suitable for washdown applications in food, beverage, and pharmaceutical facilities. Comply with ASTM D257, D638, D790, D792, D1784, D3679, E84, E136; USDA, ICBO, SBCCI, and BOCA.

FIBERGLASS INSULATED FITTING COVERS

- Temp. range: -32° to 150°F
- R-value: 3.5

Fit over bare pipe elbows; include insert. PVC and fiberglass construction.

PVC INSULATED PIPE JACKET

- 4-ft. lengths
- Temp. range: -30° to 150°F

Fits over bare pipes and pipe insulation. PVC construction.

Fits Max. O.D.	Approx. R Value	90° Elbow Item No.	End Cap Item No.	Tee Item No.

Flexible Elastomeric (Rubber) Closed-Cell Pipe Insulation

PIPE INSULATION

- 6-ft. lengths

Elastomeric material retards heat loss, prevents condensation, and provides effective moisture vapor resistance. Environmentally friendly and CFC-free. Mold- and mildew-resistant, fiber-free, and nondusting. Can be used in underground applications above the water table. Seal before back-filling. Meets ASTM C 411, C 534 Type 1, D 1056-00-2B1, and E 84 2" 25/50 tested according to UL 723 and NFPA 255. CAN/ULC S102-M88, FMRC 2006 Approval Guide Chapter 14, NFPA 90A Sect. 2.3.3, and FM Approved. Meets UL 94-5V Flammability Classification (Recognition E300774) and UL 181 Sections 11.0 and 16.0.

Insul-Tube

- Temp. range: -297° to 220°F
- MIL-P-15280, for tubing

Unslit tubing can be slit lengthwise and fit over existing pipes. Seal with 3F417 contact adhesive, see page 2835.

Insul-Lock DS (Double Seal)

- Temp. range: -70° to 220°F

Preslit, preglued tubing has factory-applied pressure-sensitive adhesive on the seam, plus flexible PVC overlap tape with acrylic adhesive for added security.

FITTING INSULATION

- Temp. range: -297° to 220°F

K-Fit prefabricated insulation is easier to install and provides a cleaner appearance than field-constructed insulation. Designed to fit over elbows and tees with no additional cutting or molding. Can be used for hot/cold water, chilled water, refrigeration, and air conditioning applications. Meets UL 94 and GREENGUARD Certified.

K-FLEX USA

Elastomeric Pipe Insulation

K-FLEX DUCT LINER

This fiber-free, closed-cell, flexible elastomeric foam insulation features sound absorption, moisture resistance, low thermal conductivity, and does not need additional facing. Its ideal for use as an acoustical/thermal insulation liner in industrial and commercial HVAC ducts.

K-FONIK AB NOISE ABSORBER

This flexible, open-cell sound absorber is made from recycled, closed-cell foam particles bonded together. Use to decrease transmission noise on large pipes in most industrial applications.

K-FLEX PIPE INSULATION TAPE

45AT32 has a pressure-sensitive adhesive that is ideal for insulating short pipe runs or valves where installing tubing insulation is not practical. 52JR59, 52JR61 and 52JR62 have a smooth and tough surface that's easy to clean and is weather-, UV-, and abuse-resistant. 52JR59 is ideal for outdoor use.

K-FLEX MOUNTING ACCESSORIES

Adhesives help provide a permanent flexible bond over a wide variety of substrates.

Flexible, Halogen-Free Elastomeric (Rubber) Pipe and Fitting Insulation

K-FLEX USA

- Temp. range: -297° to 250°F
- Green color

K-Flex ECO Pipe Insulation—Will not contribute to stress crack corrosion on high-temperature stainless steel applications. Can be used in solar hot water, low-pressure steam, food processing, cleanroom, and marine applications. Complies with IMO and Solas specifications. Meets stringent testing for U.S. Navy combat ships, as described in the Electric Boat Specifications EB 4013.

K-Flex ECO Sheets—Can be used for hot/cold water, chilled water, refrigeration, and air conditioning applications. Sheets can be cut to size for specific applications.

4NPW8

Flexible Tundra Polyolefin Pipe Insulation

armacell

- 6-ft. lengths

Help prevent heat gain and condensation or frost formation on water and air conditioning lines. Use with 320 or 620 contact adhesive or other approved sealing system. Polyethylene construction. Meet ASTM C 1427.

PRE-SLIT, BLACK

- Temp. range: -160° to 200°F

Quickly slide over pipe or tubing. Slit lengthwise when applying to existing tubes.

PRE-SLIT/PRE GLUED, BLACK

- Temp. range: -160° to 200°F

Tubing has factory-applied adhesive and built-in release tabs. Can be pushed around P-traps and elbows up to and including 1" copper tube size. Mitering is recommended for complex joints.

PRE-SLIT/PRE GLUED, WHITE

- Temp. range: -330° to 210°F
- FlowGuard Gold compatible

Ideal for use in cleanrooms, hospitals, and any application where pipes are exposed, and aesthetics are important. ASTM C 1427; ASTM E 84; ASTM E 84, 25/50 flame and smoke rating. CAN/ULC S102.2-M88. City of LA Report RR8316. Dade Co. FL Acceptance 95-1215.08. NYC MEA 305-93.

INSULATION SHEETS

- Temp. range: -330° to 210°F

Closed cell design and flexibility is ideal for wrapping large pipes, tanks and vessels. GREENGUARD certified for use in hospitals and schools. ASTM E 84, 25/50 flame and smoke rating.

ITW INSULATIONSYSTEMS

Pipe Insulation and Aluminum Jacketing

PIPE INSULATION

- Temp. range: -297° to 300°F

EPDM rubber-based elastomeric material is flexible, lightweight, UV resistant, and requires no outdoor weather protection. Insulation is noncorrosive to copper or stainless steel, requires no vapor barrier, and is paintable. Can be used on hot liquid heating systems, cold water plumbing, and chilled water and refrigeration lines to control condensation formation. Meets ASTM C534, C692, D635, E84, and E96.

JACKETING ALUMINUM ELBOWS

Help protect insulation and underlying pipe or vessel from corrosive atmospheres, physical damage, UV exposure, and water. Feature a 3-mil thick polysurlyn moisture barrier laminated to the inside surface to help prevent corrosion of the underlying metal pipe. Suitable for standard outdoor use on horizontal tanks, pipe, and vertical tank insulation systems. Meets ASTM C1371, C1729, and E84.

INSULATED PIPE JACKET

Aluminum material helps protect mechanical insulation systems including equipment, pipe, and vessels. Features a 3-mil thick polysurlyn moisture barrier laminated to the inside surface to help prevent corrosion of the jacketing and the underlying equipment, metal pipe, or vessel. Ideal for use on all standard outdoor pipe, vertical tank insulation systems up to 8-ft. dia., and all horizontal tanks. Meets ASTM C1371, C1729, and E84.

Mineral Wool/ Foil Backing Board

Super Firetemp Board

ROXUL The Better Insulation
IIG Industrial Insulation Group, LLC

High Temperature Insulation

- Durable and noncombustible

MINERAL WOOL BOARD

- Temp. range: 0° to 1200°F

Lightweight material is rigid, water repellent, and ideal where compressive resistance is required. Insulation has excellent thermal resistance, is noncorrosive, and chemically inert. Suitable for use in high temp. applications including drying oven equipment, petrochemical and power generating equipment, and storage tanks. Meets ASTM C612 Type 1VB, E136, E84, C665, and C795.

SUPER FIRETEMP BOARD

- Temp. range: 0° to 1700°F

Inorganic material is essentially dust-free and can be machined into a variety of shapes or sizes. Ideal for very high temp. applications including furnace wall structural supports and for use behind fire brick to help prevent thermal spalling. Meets ASTM C656, C795, E72, E119, E84, E136. UL 263, UL 1479, and UL 1709 Listed. NFPA 251 compliant.

Fiberglass and Cotton Duct Insulation

Frost King · Johns Manville · ITW INSULATIONSYSTEMS

For use in commercial and industrial heating, air conditioning, and power and process equipment applications.

DUCT INSULATION – FROST KING

- Temp. range: 35° to 150°F (cotton), 35° to 250°F (fiberglass)
- 16"W x 48"L" (cotton), 12"W x 15 ft. L (fiberglass)

Easy-to-install insulation helps insulate, reduce vibration, and can be installed on air conditioning or heating ducts. Foil jacket. 48H491 is a natural cotton insulation made from recycled denim and and meets ASTM E408. 48H490 meets NFPA 90A, NFPA 90B, and ASTM C1136 Type II.

DUCT INSULATION BOARD – JOHNS MANVILLE

- Temp. range: -32° to 450°F (unfaced side), -32° to 150°F (faced side)

For systems that operate below ambient temperatures and where a vapor barrier is required. Insulation has square corners for a finished appearance on duct and equipment systems. Cuts easily with a utility knife and can be secured with mechanical fasteners or adhesive. Meets ASTM C612, Type IA; C612 Type IB; C553 Type III, HH-I-558C, HH-I-558B; E-84; C795; C1136. Mil. Spec. I-24244C. NFPA255. NRC 1.36. UL Listed.

DUCT INSULATION WRAP – JOHNS MANVILLE

- Temp. range: -32° to 250°F
- 48"W x 25"L

6ZKK3

For HVAC systems that operate below ambient temperatures, and where temperature control and a vapor barrier are required. Insulation comes with a vapor barrier and a 2" stapling tab. Meets ASTM C411, C553, C665, C1104, C1136s, C1290, C1338, E84; NFPA 90A; UL, C-UL Listed.

HIGH TEMPERATURE INSULATION – ITW

- Temp. range: -297° to 297°F
- 24"W x 48"L

Lightweight, moisture-resistant polyisocyanurate material has excellent thermal performance. Insulation features low moisture vapor permeability and good compressive strength. Density: 2#. Meets ASTM D1622, C518, E96, E84 at 1", D2126 Dimensional Stability.

Pipe, Hose, and Valve Insulation

UNITHERM International inc.

Insulated Throw Blankets and Pipe Jackets—Can reduce heat loss and insulate barrels, dies, extruders, hoses, and pipe. Removable and is reusable. Insulated Throw Blankets require a strap and buckle 34CY92, 34CY91, or 34CY90, sold separately below.

Accessories—34CY92, 34CY91, and 34CY90 are durable fiberglass straps for installing insulated throw blankets. Feature steel roller buckles for easy adjustment and help ensure a secure fit. 34DA19 and 34DA20 allow you to measure high-temperature surfaces and are ideal for use when installing insulation.

Ceramic Fiber Blankets—Aluminum silicate fiber material is ideal for insulating pipes that transport high-temp. materials. Include hold-in-place straps on the inside and feature a top flap you can open to release heat if needed. Meet UL 723.

- Max. temp.: 2300°F, except 34DA14 is 2600°F

Valve Insulation—Reusable valve covers feature dual-layer mineral wool and fiberglass insulation, plus a durable silicone-coated fiberglass cloth jacket. Included adjustable draw cord and lacing anchors for a tight secure fit.

- Max. temp.: 900°F
- 3" thickness

Flange and Valve Insulation—Reusable insulation covers help reduce heat loss and energy costs. Silicone-coated fiberglass material is suitable for a variety of flange and valve sizes.

- Max. temp.: 900°F

Ceramic Fiber Insulation—Aluminum silicate fiber material is ideal for insulating pipes that transport high-temp. materials. Meet UL 723.

- Max. temp.: 2300°F, except 54TP62 is 2400°F

879 Series 4NPC8

ASJ 79 Series 4NNX4

079 Series 4NNV4

Melamine Preformed Pipe Insulation and Sheets

TECHLITE™

- Temp. range: -40° to 350°F
- Pipe insulation is 4-ft. long

Fiber-free insulation system is produced from ozone-friendly TechLite® melamine foam. Include ship-lap joints and/or relief cuts to accommodate curved surfaces. Preformed sections fit pipes and tubes. Flat sheets can be used for ductwork and large vessels. Insulation meets ASTM C1410 Cellular Melamine, ASTM E84 25/50 Rating.

379 Series—Covered with a high-strength, 30-mil, polyester-reinforced PVC outer jacketing. Covering is UV-resistant and approved for outdoor use; absorbs impacts and returns to its original shape. White color.

879 Series—High-gloss semirigid 20-mil PVC outer jacketing has excellent antibacterial and low-mold properties. Approved for severe washdown requirements of sanitary processes. Ideal for food and beverage, clean room, and biopharm applications. White color.

ASJ 79 Series—Covered with a fiber-reinforced, paper-and-foil lamination; an excellent choice for interior applications. True foil barrier has very low vapor permeability. Outer cover is paintable or can be covered with a secondary jacket if used in outdoor applications. White color.

079 Series—Plain, light gray foam can be easily fabricated over nonstandard pipes or ducts; form and fit with simple hand tools. Can be layered or mitered to fit nonstandard curves or objects. Mechanically fasten or glue in place.

Self-Fusing Silicone Tape

ER Emergency Repair TAPE

- Operating temp.: -130° to 500°F

Protective overwrap is adhesive-free. For use in insulating electrical connections, protecting pipe threads, friction wrap for handle grips, tension wrap for bundles of wires and hoses, temporary hose repairs, and corrosion protection. Cures in 24 hr. and creates a permanent seal. 32XV29 to 32XV34 have a triangular shape that helps assure a smooth and uniform wrap over difficult shapes such as bus bars, cable harnesses, coils, and splices. All items meet Mil. Spec. CID A-A-59163 and are UL 510 Recognized.

Rubber Flange Gaskets—Full-Face

- ⅛" thick
- ANSI sized to fit 150-lb. flanges

NEOPRENE BLEND (BLACK)
- Temp. range: -20° to 190°F

Have moderate resistance to ozone, oxidation, water, hydraulic silicate, and oil.

SBR BLEND (RED)
- Temp. range: -20° to 180°F

Good heat resistance for low-pressure hot and cold water applications.

FDA NITRILE (OFF WHITE)
- Temp. range: -25° to 180°F

Made with FDA-approved ingredients.

FKM FLUOROELASTOMER (BLACK)
- Temp. range: -10° to 400°F

Excellent resistance to oils, fuels, chlorinated solvents, hydrocarbons, and strong acids.

SILICONE (RED)
- Temp. range: -80° to 400°F

Excellent performance in extreme temperatures.

Thermoseal An Independent Klinger Company | TEADIT Sealing for a Safer and Greener Tomorrow | Garlock SEALING TECHNOLOGIES

PTFE and Fiber Ring Gaskets and Sheets

- Ring gaskets are ANSI sized to fit 150-lb. flat-face and raised-face flanges

RING FLANGE GASKETS

A. Virgin PTFE
- Max. pressure: 150 psi
- Temp. range: -450° to 500°F

High-purity gaskets provide a low-stress seal with high chemical compatibility.

B. Inorganic Fiber Garlock IFG 5500
- Max. pressure: 1200 psi
- Temp. range: -100° to 800°F, 550°F continuous

Thermally stable gaskets resist aliphatic hydrocarbons, gasoline, saturated steam, inert gases, and most refrigerants.

C. Microcellular PTFE Garlock 3545
- Max. pressure: 1200 psi
- Temp. range: -450° to 500°F

Resist strong acids, caustics, and hydrocarbons.

D. Flexible Graphite with 316SS Insert
- Max. pressure: 2000 psi
- Temp. range: -400° to 850°F

Seal effectively during thermal cycling, resist corrosive chemicals, and are for use in critical sealing applications.

E. PTFE with 304SS Insert
- Max. pressure: 800 psi
- Temp. range: -250° to 450°F

Void-free, virgin PTFE.

C. Garlock Microcellular

PTFE and Fiber Ring Gaskets and Sheets

Thermoseal An Independent Klinger Company · TEADIT Sealing for a Safer and Greener Tomorrow · Garlock SEALING TECHNOLOGIES

F. Expanded PTFE Gore Style GR and UPG Style 800
- Max. pressure: 3000 psi
- Temp. range: -450° to 600°F

Dimensionally stable and resist creep and cold flow. Provide low stress-to-seal for applications using plastic and glass-lined flanges. Resist many aggressive chemicals. 4CYR7 to 4CYR9, 4CYT1 to 4CYT8 are cut from sheet material. 38R343 to 38R353 are molded gaskets.

G. Aramid Fiber with Nitrile Binder Garlock 3000
- Max. pressure: 1000 psi
- Temp. range: -100° to 700°F, 400°F continuous

Help reduce fluid loss, maintenance, energy consumption, and inventory costs.

H. PTFE with Aluminosilicate Microspheres Garlock Gylon® 3504
- Max. pressure: 800 psi
- Temp. range: -450° to 500°F

Suitable for use with some caustics and moderate concentrations of hydrocarbons, hydrogen peroxide, refrigerants, and solvents.

I. Synthetic Fibers with Nitrile Binder (Thermoseal Klingersil® C-4401)
General-purpose gasket material features good sealability, chemical resistance, and good creep relaxation.

J. Graphite with Nitrile Binder Garlock 9900
- Max. pressure: 2000 psi
- Temp. range: -100° to 1000°F

This high-temperature gasketing minimizes cold flow and has reduced creep relaxation.

K. Expanded PTFE
- Max. pressure: 2900 psi
- Temp. range: -400° to 599°F

Compresses easily to minimize creep and cold flow.

L. PTFE with 304 SS Reinforcement Core
- Max. pressure: 150 psi, except 16T714 is 125 psi
- Temp. range: -400° to 500°F

Used for pipeline blocking, this pipeline gasket has a handle to ease installation.

M. SYNTHETIC FIBERS WITH A PROPRIETARY RUBBER BINDER GARLOCK 3760
- Max. pressure: 500 psi
- Temp. range: -100° to 400°F

Create their own low-pressure load with proprietary rubber binder. Material won't degrade when in contact with oils and is conformable to irregular flanges.

GASKET SHEETS

Expanded PTFE, 38VP92 to 38VP95

Softer and more flexible than conventional PTFE so it can easily conform to rough and irregular surfaces. Minimal creep at elevated temperatures.

PTFE with Glass Microspheres Garlock 3504, 16T703 to 16T706

Improved performance over PTFE. Suitable for use with some caustics, moderate concentrations of acids, hydrocarbons, refrigerants, and solvents.

Flange Gaskets and Spiral Wound Metal Gaskets

Thermoseal An Independent Klinger Company

45CE04

45CE05

FLANGE GASKETS (KLINGERSIL C-4401)

- Max. pressure: 150 psi
- Temp. range: 0° to 750°F

Feature greater sealability, chemical resistance, and good creep relaxation.

SPIRAL WOUND METAL GASKETS

- Max. pressure: 150 psi
- Temp. range: 0° to 932°F

Suitable for use on raised face and flat face flanges. Type CR gaskets feature a solid metal outer ring that functions as a centering device and a compression stop. Type CRIR gaskets feature solid metal outer and inner rings that help protect the inner windings of the gasket element from high temperatures.

Garlock SEALING TECHNOLOGIES® The Flexitallic Group

Metal-Reinforced Spiral-Wound Ring Gaskets

1TUZ8

38R293

Meet ANSI B16.20.

GARLOCK RW

- Temp. range: -320° to 842°F

With 304 stainless steel windings, flexible graphite filler, and a carbon steel centering ring. For hydrocarbon processing and refining, pulp and paper, and oil and gas applications.

APPOVED VENDOR SPIRAL-WOUND

- Temp. range: -320° to 842°F

304 stainless steel windings, with flexible graphite filler and carbon steel centering rings.

GARLOCK RWI

- Temp. range: -320° to 500°F

304 stainless steel inner ring protects sealing elements from process media. 304 stainless steel winding, PTFE filler, and carbon steel centering rings.

FLEXITALLIC CGI

- Temp. range: -150° to 842°F

304 or 316 stainless steel windings with flexible graphite filler. Include inner ring. Suitable for use with flat face and raised face flanges and specified for high pressure/temperature service or where toxic or corrosive carbon steel centering materials are present.

FLEXITALLIC CG

- Temp. range: -150° to 842°F

316 stainless steel windings with flexible graphite filler. Feature an external ring that centers the carbon steel centering gasket on the flange face. Provides additional radial strength to help prevent gasket blowout and acts as a compression stop. General purpose gasket suitable for use with raised face and flat face flanges.

HOSE MASTER Inc.

6MP27

Corrugated Metal Hoses, 6½"L to 11"L

316 Stainless Steel Corrugated Metal Hoses with 316 Stainless Steel Braided Cover—These corrugated metal hoses have a 316 stainless-steel inner hose with a 316 stainless-steel braided cover (or outer hose). 316 stainless steel provides excellent corrosion resistance and is ideal for industrial chemical-processing applications.

321 Stainless Steel Corrugated Metal Hoses with 304 Stainless Steel Braided Cover—These corrugated metal hoses have a 321 stainless-steel inner hose and a 304 stainless-steel braided cover. 321 stainless steel can withstand very high temperatures. It has high strength, resists scaling, and provides phase stability with resistance to subsequent aqueous corrosion. 304 stainless steel can be sanitized. It can withstand corrosion from most oxidizing acids but is susceptible to corrosion from chloride solutions or from high-saline environments like coastal regions.

HOSE MASTER Inc.

Corrugated Metal Hoses, 12"L to 36"L

316 Stainless Steel Corrugated Metal Hoses with 304 Stainless Steel Braided Cover—These corrugated metal hoses have a 316 stainless-steel inner hose with a 304 stainless-steel braided cover (or outer hose). 316 stainless steel provides excellent corrosion resistance and is ideal for industrial chemical-processing applications. 304 stainless steel can be sanitized. It can withstand corrosion from most oxidizing acids but is susceptible to corrosion from chloride solutions or from high-saline environments like coastal regions.

316 Stainless Steel Corrugated Metal Hoses with 316 Stainless Steel Braided Cover—These corrugated metal hoses have a 316 stainless-steel inner hose with a 316 stainless-steel braided cover (or outer hose). 316 stainless steel provides excellent corrosion resistance and is ideal for industrial chemical-processing applications.

321 Stainless Steel Corrugated Metal Hoses with 304 Stainless Steel Braided Cover—These corrugated metal hoses have a 321 stainless-steel inner hose and a 304 stainless-steel braided cover. 321 stainless steel can withstand very high temperatures. It has high strength, resists scaling, and provides phase stability with resistance to subsequent aqueous corrosion. 304 stainless steel can be sanitized. It can withstand corrosion from most oxidizing acids but is susceptible to corrosion from chloride solutions or from high-saline environments like coastal regions.

Interlocked Metal Hose Assemblies

HOSE MASTER Inc.

- Temp. range: -325° to 1200°F

Interlocked metal hoses are made from a single strip of metal that is profiled and locked onto itself. They are also known as stripwound metal hose. The hoses' overlapping, or interlocked, sections can slide back and forth to allow the hoses to flex.

Roughbore—Roughbore interlocked metal hoses have a rough interior. They are used for high-temperature ducting or hot-air blower applications, engine exhaust, loading and unloading trailers and railcars, grain vacuuming, transferring abrasive materials, dust collection, and as an protective outer cover for other hoses.

Smoothbore—Smoothbore interlocked metal hoses have a smooth, abrasion-resistant internal metal liner that helps prevent damage to products being conveyed inside the hose and prevents material from building up inside the hose and restricting flow. These hoses are used for transferring plastic pellets, grain, wood chips, and other abrasive media and for loading and unloading trailers and railcars.

Molded Expansion Joints

- Max. pressure (Drilled): 225 psi at 72°F
- Max. pressure (Flanged): 231 psi

Flexible, nonmetallic joints absorb pipe movement/stress to reduce system noise and extend system life. Models can also absorb water pulsation and minimize water hammer. Single Sphere models help prevent piping system damage by absorbing contraction and elongation movement caused by temperature variances. The floating flanges ease installation. Double Sphere models help prevent piping system damage by absorbing greater contraction, elongation, and angular movement than single sphere models. Also act as a good electrical insulator. Corrosion-resistant plated carbon steel flanges rotate for quick installation. Neoprene connectors are tapped to ANSI 125/150 drilling. All joints are ideal for use in HVAC, petrochemical, industrial piping, power generating, marine service, pulp and paper, water and wastewater, and pollution control applications.

Short & Long Limit Rod

Wide Arch

Threaded Union

Wide Arch and Threaded Union Molded Expansion Joints

Use to help reduce vibration and dampen sound transmission. Meet ANSI B16.5.

SHORT AND LONG LIMIT ROD

This assembly consists of 2 control rods (tie rods) placed across an expansion joint from flange to flange to help prevent damage caused by excessive pipe movement. Designed to only limit extension movement. Flanged connection.

WIDE ARCH

- Max. pressure: 150 psi
- Temp. range (EPDM): -50° to 240°F
- Temp. range (Neoprene): -50° to 212.5°F
- Vacuum: 15" Hg at 72°F

Feature a larger arch and allow for greater movement and lower spring rate than traditional spool-type rubber expansion joints. Flanged connection.

THREADED UNION

- Max. pressure: 150 psi
- Temp. range: - 50° to 194°F
- Vacuum: 26" Hg at 72°F

Designed to absorb thermal movement, offset, and misalignment in most piping systems, and to protect piping from start-up vibration and system surges. The neoprene or EPDM body eliminates metal-to-metal contact and helps prevent electrolytic action. Tapped holes connection.

Rotary Unions, Cartridges, and Joint Elbows

Duff-Norton

Transfer steam and fluids to rotating drums or rolls to control surface temperatures. Unions and elbows also transfer air or hydraulic fluid to moving components, and add fluids to mixers while in motion. All models have NPT connection, except Rotary Union Cartridges.

9000 SERIES ROTARY UNIONS

- Max. speed: 700 rpm
- Max. pressure: 250 psi water; 150 psi steam (except 35PP27 to 35PP38 are 175 psi); 100 psi hot oil
- Max. temp.: 375°F water, steam, hot oil (except 35PP27 to 35PP38 are 378°F steam and 600°F hot oil)

Bellows-type seal resists hangup in contaminated media. Dual-flow joints accept NPT threaded stationary pipe.

5000 SERIES ROTARY UNIONS

- Max. speed: 1000 rpm NPT; 550 rpm air
- Max. pressure: 750 psi water; 120 psi steam; 100 psi hot oil; 300 psi air
- Max. temp.: 300°F water; 350°F steam; 395°F hot oil

Corrosion-resistant unions have 2 precision bearings with fluorocarbon O-rings. Dual flow unions require rotary joint elbow.

5000 SERIES ROTARY JOINT ELBOWS

- Max. pressure: 750 psi water; 120 psi steam; 100 psi hot oil; 35PP39 is also 300 psi air
- Max. temp.: 300°F water; 350°F steam; 395°F hot oil

Air Conditioning and Refrigeration Copper Coils and Straight Lengths

- Temp. range: 32° to 400°F

Copper refrigeration tubing easily connects air conditioning and refrigeration equipment, using sweating or flare fittings. Coils are nitrogen purged to reduce contaminants. Meets ASTM B280.

Type K and Type L Copper Water Tubing, Coils

- Temp. range: 32° to 400°F

Use Type K tubing to connect water mains and meters and to form heavy-duty underground vacuum pump lines. A high melting point helps maintain pressure when subjected to flames; ideal for fire sprinkler systems. Thick-walled, Type L tubing is designed for above- or below-ground water service and hydronic heater applications. All tubing meets ASTM B88 and building codes in all 50 states.

Type K, L, and M Copper Water Tubing, Straight Lengths

MUELLER STREAMLINE

- Rated internal working pressure up to 100°F
- Temp. range: 32° to 400°F

Type K tubing is used to connect water main and meters, and to form heavy-duty underground vacuum pump lines. Thick-walled Type L tubing can be used for both inside and outside applications. Thin-walled Type M is commonly used in homes, behind walls. Tubing meets ASTM B88 and meets or exceeds building codes in all 50 states.

DWV Copper Tubing, Straight Lengths

- Temp. range: 32° to 100°F
- Tube length: 10 ft.

For use in drain, waste and vent systems. Meets ASTM B306.

Tube Size	Outside Dia.	Inside Dia.	Wall Thickness	Max. Pressure	Item No.
1 ¼ in	1 ⅜ in	1.25 in	0.04 in	330 psi	**22FC88**

4 in	4 ⅛ in	4 in	0.058 in	150 psi	**22FC92**

Rapid Pipe Repair Clamps

ROTHENBERGER pipetool technologies at work

Compact repair clamps are simple to use and can easily repair a burst or leaking pipe. Once installed, they allow the pipe to function under normal temperatures and pressures until you can complete a permanent repair. Non-toxic construction, reusable, and suitable for use with metal, multilayer, or plastic pipe.

Pipe Size	Fits Outside Dia.	Max. Pressure (psi)	Temp. Range	Item No.
½ in	0.84 in	87	32° to 185°F	**53RF29**
¾ in	0.84 in	87	32° to 185°F	**53RF30**

304 and 316 Stainless Steel Tubing and Coils—Welded and Seamless

Meets ASTM 269.

304 STAINLESS STEEL

- Temp. range: -423° to 1500°F

The most versatile and widely used of stainless steel grades, due to its combination of corrosion resistance, formability, and ductility.

Welded

Less costly than seamless or welded-and-drawn tubing and requires less stock removal in machining applications. Can also be produced with extremely thin walls.

Seamless

Features heavier wall thicknesses for mechanical applications. Ideal for food and beverage, pharmaceutical, and chemical and petrochemical processing applications.

316 STAINLESS STEEL

- Temp. range: -325° to 1500°F

Provides the best resistance to pitting and corrosion of any of the austenitic (300 series) stainless steels. Extremely ductile, with excellent strength at elevated temperatures.

Welded

Weld bead remains on the inside diameter. Less expensive than seamless or welded-and-drawn tubing.

Seamless

Seamless tubing can be produced with heavier wall thicknesses for mechanical applications. Ideal for hydraulic and instrumentation tubing in chemical, textile, and pulp and paper industries, and in marine environments.

Aluminum and 316 Stainless Steel Instrumentation Tubing

- Seamless construction

Aluminum—Features very good corrosion resistance and finishability, as well as excellent weldability. Strength approximates that of mild steel. Can be fabricated by most common techniques. Meets ASTM B210 and WW-T-700/6.
- Temp. range: -452° to 400°F
- Length: 6 ft.

316 Stainless Steel—Can be used with Hamlet, Swagelok, and Parker A-Lok metric fittings, with water, air, natural gas, oil, and hydraulic fluid. Sterilize with steam. Use with metric instrumentation fittings, sold on page 2858. Meets ASTM A269, except 4NTK1 to 4NTK6 meet DIN EN10216-5.
- Temp. range: -325° to 1500°F
- Length: 2m

White Acetal Push-Button Tube Couplings

CPC A DOVER COMPANY

- Max. pressure: 120 psi
- Temp. range: -40° to 180°F

Chemical-resistant fittings let you connect and disconnect by hand. Couplers have built-in shutoff valves. Use for engine system, biohazard detection, printing and ink, and cleanroom/sterilization, as well as in food/beverage and chemical applications. Meet USDA, NSF, and RoHS compliant.

JG Super Speedfit®

Gray Acetal Push-In Fittings

- Max. pressure: 150 psi
- Temp. range: -14° to 167°F (air); 33° to 140°F (water)

For use with PVC, polyethylene, nylon, polyurethane, brass, copper, and mild steel tubing. Fittings have nitrile O-ring seal, stainless steel teeth, and can be used for potable water, food, chemical, pneumatic, reverse osmosis, plumbing, and fiber optic applications. FDA and NSF Approved.

Nickel-Plated Brass Push-To-Connect Fittings and Chrome-Plated Mini-Ball Valves

- Max. pressure: 250 psi
- Temp. range: 0° to 160°F

Designed for use on all pneumatic circuits and feature a quick connect/disconnect positive seal. Push-in design requires no special tools. For use with nylon, polyethylene, and polyurethane tubing and suitable for use in air, water, and oil applications.

MINI-BALL VALVES

Reduced port valves feature nitrile rubber seals, PTFE seats, and brass stem.

Prestolok Nickel-Plated Brass Push-To-Connect Fittings

Parker

- Max. operating pressure: 300 psi
- Max. operating temp.: 0° to 200°F (depending on tubing used)
- Pkg. qty.: 10

Compact, 1-pc., nickel-plated brass fittings are designed for low-pressure circuits, easy to assemble, and for use with polyethylene, nylon, or polyurethane tubing. Support ferrules or I.D. tube supports only required for thin-walled poly tubing. Vacuum applications depend on temperature and tubing type.

WARNING: For use only with air, water, oil, and nonreactive gases. Do not use where accidental separation of tube and fitting could cause injury. Not recommended for continuous-pressure cycling applications.

Chrome-Plated Brass Mini-Ball Valves

ALPHA FITTINGS & ACCESSORIES

- Max. pressure: 290 psi
- Temp. range: 0° to 175°F
- Vacuum: 0 to 20 bar
- PTFE ball seat

Suitable for use with air, oil, nonpotable water, and inert gas.

Silicone-Free Nickel-Plated Brass Push-To-Connect Fittings

legris

- Max. working pressure: 7 to 435 psi
- Working temp. range: -4° to 302°F
- FKM O-ring

Fittings are easy to install, connect, and disconnect. The high phosphorus chemical nickel plating resists abrasion, chemicals, and corrosion. Fittings are ideal for aggressive environments such as in welding applications where fittings must remain intact even if hit by weld spatter. FDA approved for use in food processing applications.

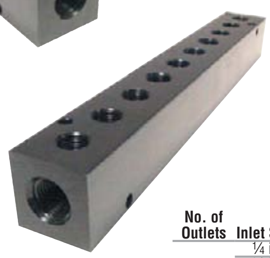
Metal Manifolds

BIMBA | PNEUMADYNE

2KGZ2



2KGZ9

- Max. pressure: 1000 psi, except stainless steel are 3500 psi
- Temp. range: -10° to 200°F, except stainless steel are -100° to 500°F
- Mounting hole: 49AV63 to 49AV90 are 0.26", stainless steel are 0.20"

Simple tube run design and layout reduces clutter, eases troubleshooting, and provides the basis for orderly tube runs. FNPT connections. Models with 90° port orientation allow manifolds to be configured and mounted in difficult applications. All are for use with air, water, and hydraulic oils, except black anodized aluminum are also for use with natural gas and gasoline.

Brass and Lead-Free Brass 45° and Flare Fittings

Parker

- Temp. range: -65° to 250°F
- Pkg. qty.: 10, except where noted

May be disassembled and reassembled repeatedly. Resist mechanical pull-out and are suitable for use with thin-wall tubing. Material and working pressure of tubing must be determined before using in a specific application. Suitable for use in refrigeration equipment, air compressors, and machinery. Can be used with flareable copper, brass, aluminum, and welded steel hydraulic tubing. UL Listed for flammable liquids. Meet SAE J512 and J513. Lead-free fittings are certified for use in potable water applications.

316 Stainless Steel 37° Flare Tube Fittings

Air-Way Manufacturing Company

- Temp. range: -160° to 1200°F

Superior chemical, water, and corrosion resistance for extreme applications. Good sealing reliability. Use as an adapter to hose assemblies, or as a tube fitting with flared stainless seamless or welded tubing. Suitable for chemical plants, food plants, hydraulic applications, manufacturing facilities, water treatment plants, and beverage plants. Meet SAE J514.

Poly-Tite Brass Compression Fittings

- Max. pressure: 150 psi
- Temp. range: 0° to 150°F
- Pkg. qty.: 10

Preassembled body, nut, and sleeve allow fast, convenient installation. An exclusive sleeve grips plastic tubing up to 150 psi. Nuts rotate around tubing as it tightens. Acetal copolymer sleeve with brass nut (1VPA8 to 1VPB2) resists creeping and compression stress. For use with thermoplastic tubing in pneumatic and liquid applications.

Brass Compression and Lead-Free Brass Fittings

Parker

- Temp. range: Parker items are -65° to 200°F; Approved Vendor items are -65° to 250°F
- Pkg. qty.: 10, except Low-Lead items are pkg. of 1

Eliminate the need to flare, solder, or otherwise prepare tubing before assembly. Use with annealed copper, aluminum, and thermoplastic tubing where excessive vibration or tube movement is not involved. UL Listed for flammable liquids. Meet SAE J-512 functional requirements, except 20XM26 to 20XM99 and 20XN01 to 20XN22 meet NSF 61 Annex G. Lead-free items are certified for use in potable water applications.

Compress-Align Brass and Lead-Free Brass Fittings

- Temp. range: -65° to 200°F

These heavy-duty fittings align to seal even out-of-round tubing, so tubing does not require flaring, solder, or other preparation. Preassembled brass fittings have captive sleeves. Bodies are interchangeable with standard compression fitting bodies. For low- and medium-pressure tubing connections to copper, brass, aluminum, and thermoplastic tubing. Lead-free items are certified for use in potable water applications.

Pargrip PFA Compression Fittings

- Temp. range: 0° to 266°F

Virgin fluoropolymer materials provide highest purity and highest temperature capability of any thermoplastic material. Suitable for high-purity lab and semiconductor applications, especially with aggressive liquids and in highly corrosive environments. Can be easily assembled without hand tools or the need to heat and flare tubing. FDA Approved materials.

CPI vs. A-Lok

CPI: Single-ferrule design creates a dynamic seal on tube and body, with close tolerance of nut and body dimensions for accurate tube alignment.

A-Lok: Have a double-ferrule design that allows the front ferrule to create a pressure seal on tube and body.

316 Stainless Steel Instrumentation Tube Fittings

Parker

- Temp. range: -425° to 1200°F

Provide leaktight seals in gas or liquid service. Have a 4:1 safety factor with respect to working pressure capabilities of the tubing used. Compression design allows for easy assembly. Use with 304, 316, or 316L stainless steel tubing. For use in refineries, chemical processing, power generation, and instrument lines.

LET-LOK Compression Tube Fittings

HAM-LET ADVANCED CONTROL TECHNOLOGY

- Temp. range: -425° to 1200°F
- Pkg. qty.: 1, except 31LC03 to 31LC07 are 10 per pkg.

Feature LET-LOK fittings that both seal and grip the tubing for a leak-tight assembly. Fittings are 316 stainless steel construction for corrosion resistance. Suitable for food processing, petrochemical, and pharmaceutical applications. Meet ASME, ASTMA, MIL-F-18866, SAE, and CE Certified.

Brass Instrumentation Tube Fittings

- Temp. range: -40° to 400°F

Provide leaktight seals in gas or liquid service. Designed with 4:1 safety factor with respect to working pressure capabilities of the tubing used. Compression design allows easy assembly. For an explanation of the differences between CPI and A-Lok fittings, see page 2857. For use in refineries, chemical processing, power generation, impulse lines, etc.

Stainless Steel and Brass Instrumentation Ball Valves

Parker

- 6000 psi at 100°F
- Temp. range: -65° to 350°F ("B" Series); -54° to 400°F (Hi-Pro)

Have excellent low-temperature performance and quick ¼-turn On/Off control. Free-floating ball design extends seat life. Packing nut eases inline adjustment. Valves are panel-mountable, with fracture-resistant nylon handles. 4EUK3 meets ANSI/ASME B13.34 where applicable.

Instrumentation Ball Valves, "MB" Series

Parker

- Factory preset to 1000 psig
- Temp. range: -65° to 300°F

Valves have a compact footprint and can be used for bidirectional flow; handle indicates flow direction. PFA seats and a 1-pc. packing provide a leaktight seal. Can be panel-mounted.

Instrumentation Ball Valves

HAM-LET ADVANCED CONTROL TECHNOLOGY

- 1-pc., standard port

300 PSI CWP, FKM SEALS

- Temp. range: -40° to 400°F

Designed for normally closed and quick On/Off service. Moving handle 90° upward locks in open position. Moving handle 90° downward shuts off by spring return.

2000 PSI CWP, PTFE SEALS

- Temp. range: -40° to 400°F

Feature an explosionproof stem. Locking handle models can be locked in both On and Off positions. Tight shutoff and low operating torque.

6000 PSI CWP, PCTFE (KEL-F) SEALS

- Temp. range: -20° to 280°F

On/Off, straight-port valves have a 2-way pattern. 3-way valves can be used for diverter service. Tight shutoff and low operating torque.

Instrumentation Check Valves, "C" Series

- 6000 psi at 115°F
- Cracking pressure: 1 psi
- Max. temp.: 400°F

Designed for unidirectional flow control. Custom-molded seat helps prevent blowouts. Fluorocarbon backstopped poppet reduces spring stress. Valves offer heat code traceability for material certification. FNPT connections.

Size	Flow gpm @ 60°F w/1000 psig Inlet Press.	L	Item No.
¼"	2.4	2 13⁄32 in	2KLD2
⅜"	7.1	3 in	2KLD3
½"	11.2	3 9⁄16 in	2KLD4

Instrumentation Plug Valves

- Max. pressure: 3000 psig CWP
- Temp. range: -10° to 450°F

¼-turn operation, compact, and blowout-resistant seat allows forward flow throttling. Handle indicates flow direction. Pressure rating is reduced to 150 psig when flow is opposite to the indicated direction. Fluorocarbon seats and seals. Compression connections. Meet ASTM A479 Type 316, except Brass meets ASTM B 16 Alloy C36000.

Instrumentation Needle Valves

STAINLESS STEEL, GLOBE-STYLE
- Max. pressure: 6000 psi

A self-centering nonrotating spindle tip provides bubble-tight shutoff; backstop spindle prevents blowout and minimizes atmospheric contamination. PTFE gland packing.

GENERAL-PURPOSE

Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals. Tested in accordance with ISA S75.02.

316 Stainless Steel— Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals.
- Max. pressure: 5000 psig CWP

Brass—Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals.
- Max. pressure: 3000 psig CWP

316 STAINLESS STEEL, HIGH-PURITY
- Max. pressure: 6000 psig CWP

Stem packing below power thread (PBT) prevents stem thread contamination and potential lubricant washout. 2-pc., nonrotating stem prevents stem-to-seat galling. PTFE seals. Meets ASTM A 182 Type F316.

Nickel-Plated Brass Mini Ball Valves and Kits

- Temp. range: -20° to 370°F, except kits are -40° to 350°F

Ideal for use in tight spaces and can be used with air, gas, and liquids. Valve structure is 1-pc. and full port, except ½" are standard port. 450 psi CWP valves have polycarbonate wedge handles and can be panel mounted. 600 psi CWP valves have zinc, wedge handles. Kits 1PZA7 to 1PZB5 include wedge, lever, and T-style handles. Nos. 38EF92 to 38EF99 are lead free and certified for use with potable water and meet MSS SP-110.

BONOMI
NORTH AMERICA, INC.

46CE30

3-Way Brass Ball Valves—4-Pc.

- Max. pressure: 400 psi CWP
- Max. steam pressure: 100 psi SWP
- Temp. range: -4° to 366°F

Feature 4-ball seats so that any port can be the pressurized inlet. PTFE seats with O-ring backing for low operating torque. Brass body, ball, FNPT connections, and brass blowoutproof stem. For a specific flow pattern, remove the handle and reorient the valve stem to the desired flow path, then reattach the handle. L Port models have a 90° flow pattern with off position. T Port models have a 90° and 180° flow path.

1PYZ8

- Max. pressure: 600 psi CWP
- Max. steam pressure: 100 psi SWP
- Temp. range: -4° to 350°
- FNPT connections

3-way diversion valves with L flow pattern are ideal for tank selection and help simplify fluid transfers. The middle port is common and can divert to the left or right port. 2-pc., standard-port with PTFE seats, FNPT connections, brass body, chrome-plated brass ball and stem, and a steel lever handle with vinyl grip. Blowoutproof stem.

** Chrome-plated brass ball.*

Bronze and Lead-Free Bronze Ball Valves, Full-Port

- Max. pressure: 600 psi CWP; 150 psi SWP
- Temp. range: -20° to 450°F, except 2EEJ9, 2EEK1 to 2EEK9, and 2EEL3 are 77° to 500°F

2-pc. valves have RPTFE seats and solid-ball design, blowoutproof stem, and adjustable packing gland. Brass ball, except 2EEJ9 to 2EEL3 are bronze, 48XJ15 to 48XJ29 are 316 stainless steel. All valves are for use with water, oil, gas, and steam. Meet MSS-SP-110.

Cast-Bronze Ball Valves, Full-Port

- Max. pressure: 600 psi; 150 psi steam
- Temp. range: -20° to 400°F

2-pc. design provides bubble-tight shutoff and features reinforced PTFE seat ring, blowoutproof silicon bronze stem, and high chemical resistance. Valves are suitable for high-pressure applications including compressed air, hot and cold domestic water, HVAC, and low-pressure steam. Meet MSS-SP-110, except 41E357 to 41E359.

Bronze 3-Pc. Ball Valves, Full-Port

- Max. pressure: 600 psi CWP; 150 psi SWP
- Temp. range: -20° to 450°F

With RPTFE seats and seals. Chrome-plated ball and blowoutproof stem with adjustable packing gland on chevron stem packing. For use with water, oil, gas, and low-pressure steam. Meet MSS-SP-110.

Bronze Ball Valves with Steam Trim

- Max. pressure: 600 psi CWP; 250 psi SWP
- Temp. range: -20° to 500°F

2-pc., standard-port industrial valves have MPTFE seats and a stainless steel ball with vented ball slot to relieve thermal expansion in valve body cavity. With blowoutproof stem, MPTFE stem packing, and adjustable packing gland. FNPT connections. For use with high-pressure water, oil, gas, and steam. Meet MSS-SP-110.

Bronze Ball Valves with SAE and Union Connections

1CKJ6

- Max. pressure: 600 psi CWP
- Temp. range: -20° to 450°F

With RPTFE seats and blowoutproof stem with adjustable packing gland. Meet MSS-SP-110.

SAE FEMALE

2-pc., full-port valves are machined to accept an O-ring boss connection. Drilled and tapped pad allows easy panel mounting.

FNPT UNION X FNPT BALL VALVE

Pipe union permits quick installation and arrangement changes. Standard-port with Viton O-ring.

3-Way Bronze Ball Diverter Valves

1CKF9

- Max. pressure: 400 psi CWP
- Temp. range: -20° to 450°F

Combine the features of two 2-way valves—larger ports simplify tank selection and fluid transfer. Drilled and tapped for panel mounting. L-port with RPTFE seats and blowoutproof stem with adjustable packing gland. FNPT connections. Meet MSS-SP-110.

6FXY0

Bronze Ball Valves with Auto Drain

- Max. pressure: 600 psi CWP, 150 psi SWP
- Temp. range: -20° to 450°F, except Pad Locking Lever models are 50° to 200°F

Standard-port valves have 2-pc. B584 bronze body with B16 brass retainer and RPTFE reinforced seats. Blowoutproof stem design with adjustable packing gland and automatic drain. Handle is zinc-plated steel. FNPT connections. Meet MSS SP-110 and ASTM B16, except 5LXU0 to 5LXU7 only meet ASTM B16.

1CKH7

Gas Shutoff Bronze Ball Valves

- Max. pressure: 600 psi CWP; 250 psig for LP gas
- Temp. range: -20° to 450°F

Standard-port valves have RPTFE seats and meet stringent standards for a variety of gas shutoff applications, including flammable gases. Blowoutproof stem with adjustable packing gland. FNPT connections. Meet MSS-SP-110; UL Listed for LP, natural gas, heated oils, and flammable liquids.

Ball Valves with Spring Return Handle

Standard-port valves have a blowoutproof stem and adjustable packing gland. FNPT connections. Meet MSS-SP-110.

BRONZE

- Max. pressure: 600 psi CWP; 150 psi SWP
- Temp. range: -20° to 500°F

2-pc. valves have MPTFE seats. Stainless steel lever components.

316 STAINLESS STEEL

- Max. pressure: 2000 psi CWP (to 1"); 1500 psi CWP (1¼" to 2"); 150 psi SWP
- Temp. range: -50° to 500°F

Stainless steel ball, with PTFE seats and seals.

CARBON STEEL

- Rated: 2000 psi CWP (to 1"); 1500 psi CWP (1¼" and up)
- Temp. range: -20° to 500°F

2-pc. investment-cast valves have zinc-phosphate coating; slot-vented chrome-plated ball relieves thermal expansion. Stainless steel stem and multifill PTFE seats. Vacuum service to 29" Hg.

316 Stainless Steel Ball Valves

- Rated: 2000 psi CWP up to 1"; 1500 psi CWP 1¼" and up; 150 psi SWP
- Temp. range: -50° to 450°F

Valves with investment-cast stainless steel components meet the most demanding industrial applications. Integral mounting pad with drilled and tapped holes, locking handles, and blowoutproof stem with adjustable packing gland. 2-pc., standard port valves with RPTFE seats, and FNPT connections. Vacuum service to 29" Hg. For use with water, oil, gas, and low-pressure steam in most corrosive industrial environments. Meet MSS-SP-110.

Flanged Ball Valves

- Temp. range: 0° to 500°F
- Class 150 flanges

2-pc., full port valves with TFM seats and flanged connections. Locking handles. Vacuum service to 29" Hg. Meet ASME B16.34.

316 STAINLESS STEEL

- Rated: 275 psi CWP; 150 psi SWP

Adjustable stem self-compensates for wear, temperature, and pressure. For use with hydraulics, vacuum, chemicals, oil, gas, and low-pressure steam applications.

CARBON STEEL

- Rated: 285 psi CWP

Carbon steel body and 316 stainless steel ball and stem. For use with hydraulics, vacuum, oil, and low-pressure steam in noncorrosive environments.

3-Pc. 316 Stainless and Carbon Steel Ball Valves

- Rated: 1000 psi CWP (¼" to 2"); 600 psi CWP (2½" to 4")
- Temp. range: 0° to 450°F

Full-port valves with RTFE glass-reinforced seats. Blowoutproof stem. Handle can be locked in open or closed position. PTFE body seals. Vacuum service to 29" Hg.

316 STAINLESS STEEL

For use with hydraulics, vacuum, chemicals, oil, gas, and low-pressure steam in corrosive environments. Meet ASTM A351 CF8M.

CARBON STEEL

Carbon steel body with 316 stainless steel ball and stem (17-4 PH stem for 2-pc. valves). All valves are for use with hydraulics, oils, and low-pressure steam in medium-pressure applications. Meet ASTM A216 WCB.

DynaQuip

Apollo Valves

Carbon Steel Ball Valves

DYNAQUIP

Valves with SAE connection come with an O-ring boss.

MEDIUM-PRESSURE
- Rated: 3000 psi CWP; 150 psi SWP
- Temp. range: -20° to 425°F

Zinc phosphate-coated body and adjustable stem packing. 2-pc., full-port valves with RPTFE seats. For use in industrial applications with petroleum-based water/glycol and water/oil emulsion hydraulic fluids.

HIGH-PRESSURE
- Max. pressure: 7000 psi (¼" to ⅜"); 5800 psi (½" and ¾"); 4600 psi (1" and up)
- Temp. range: -20° to 175°F

Valves operate at full-rated pressure with no seat distortion. Bottom-loaded stems with maintenance-free nitrile rubber seals. 3-pc. (¼" to 1"); 2-pc. (1¼" and up); all are full-port with Delrin seats. For use with petroleum-based, water/glycol, and water/oil emulsion hydraulic fluids.

4PGA5

True Union and PVC Ball Valves

ASAHI/AMERICA

Typically used in on/off applications and with clean fluids with very little or no suspended solids. Suitable for use in chemical processing, mining, pool, power plant, transportation, and water treatment applications. Find more Asahi Ball Valves at Grainger.com. NSF-61 Approved.

Compact

COMPACT TYPE 27

Omni ball valve has a unibody construction, low-profile design with ¼-turn handle, hyperbolic flow characteristics, low pressure drop, and reliable sealing.

TRUE UNION DESIGN TYPE 21

Tapered O-ring grooves help keep the end connector O-rings in place during installation. The PTFE seat design eases field maintenance if needed. Flats on either side of the valve body allow you to keep the body from turning when the union nuts are tightened.

4YLJ7

PVC Compact Economy Ball Valves

- Max. pressure: 150 psi CWP

Light-duty ball valves can be used with Schedule 40/80 pipe and fittings in water applications. Models with EPDM seals have a 1-pc. design that requires no ball/seat adjustment. All are suitable for use in light-duty water applications. Models with PTFE seats and socket connections meet ASTM D2467; PTFE seats and FNPT connections meet ASTM D2464.

SPEARS

PVC/CPVC Ball Valves

- Max. pressure: ½" to 2" are 235 psi CWP; 2½" to 6" are 150 psi CWP, except 20RK42 is 235 psi CWP
- Temp. range: 40° to 140°F (PVC), 32° to 190°F (CPVC)

Chemical/corrosion resistant, fully sealed, feature a self-adjusting PTFE floating seat design, and a high-impact polypropylene handle. For a variety of chemical process and industrial applications including vacuum service. Designed for horizontal installation, but can be installed in a vertical up-flow only orientation. Meet ASTM F1970.

Type 546 True Union Ball Valves

2KE46

- Max. pressure: 232 psi at 73°F

2-way full-port valves can be radial installed and feature a breakaway stem. Can be used with Schedule 80 pipe and fittings. Valves can be actuated, and handle has a molded-in wrench for access to valve components. With chemical-resistant EPDM or FPM seals. Union connections. For use in the chemical industry and in swimming pool, aquarium, wastewater, and other corrosive applications. Polypropylene meet ASTM D 4101; PVC and CPVC meet ASTM 1970-01, ASTM D1784, USP Class VI, FDA, NSF 61.

HAYWARD

TBZ Series Industrial True Union PVC and CPVC Z-Ball Valves

Ideal for sodium hypochlorite service, these valves feature a drilled ball for venting gases and keep inner valve surfaces wetted. Black handle acts as an identifier. FPM seals only with PTFE seats and double O-ring stem seal. 466J56 to 466J79 feature a lock-out/tag-out plate that can accommodate up to 4 locks. All models meet NSF and ASTM, except 466J56 to 466J79 meet NSF/ANSI 61.

1-Pc. and 3-Pc. Polypropylene Bolted Ball Valves

BANJO Liquid Handling Products

Fiberglass-reinforced bolted valves for heavy-duty industrial applications. PTFE seats allow free movement of self-aligning, diamond-tuned polypropylene ball for precise alignment. Self-lubricating PTFE stem, bushings, and ball seats won't stick or bind. With FKM seals. FNPT connections. For use in fluid-handling applications with fertilizer, herbicides, and insecticides, as well as with industrial acids, solvents, liquid waste, wastewater, and cooling water.

Actuated Ball Valves

DynaQuip

- Valve temp. range: -20° to 400°F

Compact, direct-mount valves provide accurate alignment. Anticorrosive coating. RTFE seats. 3-way models are ideal for diverter-type applications; 3-pc. models permit easy in-line maintenance. All valves have NEMA 4X enclosures.

PNEUMATIC
- Actuator inlet pressure: 80 psi or greater
- Actuator temp. range: -4° to 176°F

Excellent for continuous rapid cycling or hazardous conditions. Hard anodized aluminum housing. Integral 120VAC, 60 Hz, NAMUR-mount solenoid with three ¼" NPT ports.

ELECTRONIC
- Actuator temp. range: -15° to 140°F

Feature reversible motors, terminal strip, manual override, and a hardened precision gear train. ½" to 2" can be wired in parallel. 50% duty cycle. 3" have 2 extra SPDT limit switches, 30% duty cycle. General cycle times: 2½ sec. for ½" to 1"; 6½ to 15 sec. for 2"; 15 to 22 sec. for 3". The 12-24VAC/VDC models do not have a manual override.

SOLENOID AIR CONTROL VALVES

Standard NAMUR direct-mounted pilot solenoids can provide electronic control of the inlet air. Solenoids efficiently pressurize and exhaust the pneumatic actuator piston compartments allowing the actuator to cycle.

3-Way General-Purpose Solenoid Valves

- Max. fluid temp.: 180°F
- Buna N gaskets
- Mount in any position

Direct-acting valves are intended for air and water applications. All have 3 ports and 2 orifices that alternate between applying pressure to and exhausting pressure from actuators and cylinders. Rated for continuous duty. Meet Fluid Control Institute, Inc. and National Fluid Power Association (NFPA) standards. UL Listed and CSA Certified.

WARNING: Not for use in explosive atmospheres.

Solenoid Valves and Valve Coils

Solenoid Valves—Feature 2-way design and have Buna N gaskets (do not exceed temperature limitations). To prevent backflow, add a check valve to the system (sold separately on page 2901). Valves that have OPD minimums beginning with 0 (e.g., 0 to 300 psi) are direct-acting and will open and close when line pressures are within minimum and maximum psi ranges. Valves that have OPD minimums starting at 2 or 5 (e.g., 5 to 150 psi) are designated pilot-operated and will open and close only if pressure differential between the inlet and outlet is within OPD ranges. Normally closed valves will open when energized. Normally open valves will close when energized. Meet Fluid Control Institute, Inc. and National Fluid Power Association (NFPA) standards. UL Listed and CSA Certified.

- Max. fluid temp.: 180°F
- Mount in any position

WARNING: Not for use in hazardous atmospheres.

Note: Maximum suggested cycling rate is 10 times per min.

Solenoid Valve Coils—For use with Dayton® solenoid valves on this page only. Continuous duty coils, for Class F, H, and B insulation with NEMA coil enclosure. Coils and valves, when assembled, are UL Listed. For steam valves, use Class H coil. 12 and 24VDC coils have integral pulse modulation circuit for the same OPD ratings as AC coils. CSA Certified, except 3PU19 and 3PU18 are UL Listed only.

WARNING: Not for use in hazardous atmospheres.

† Coefficient of Volume (Cv): the amount of water in gpm at standard connections (60°F, specific gravity = 1) which will pass through the valve with a 1 psi pressure drop and the valve in the full-open position. * OPD—Operating Pressure Differential. **NEMA Class F (311°F), Class H (356°F), Class B (266°F).

Solenoid Valve Rebuild Kits

Dayton®

Replacement parts for Dayton solenoid valves. All come with plunger assembly, gasket, spring, and instructions. See Grainger.com for a complete listing of kit contents.

ASCO Red-Hat®

2- and 3-Way General-Purpose Solenoid Valves

1-pc. molded epoxy coil enclosures have built-in ½" NPT conduit hubs with strain relief. For information on standards, go to Grainger.com.

2-Way—Use high-flow valves for liquid, corrosive, and air/inert gas service applications, including car washes, air compressors, pumps, laundry equipment, and industrial water control.

3-Way—Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from valve actuators and single-acting cylinders.

2-Way Normally Closed Dust Collector Solenoid Valves

ASCO Red-Hat

High-flow aluminum valves use a powerful pulse of air to separate dust and particulate from filters and bags. NBR gasket. Remote pilot valves require separate solenoid valves. Integral pilot valves feature watertight type molded epoxy solenoid coils with ½" conduit hub. Coil included. Valves have NPT pipe connections (except 5LU48 is compression connection).

2-Way Normally Closed Slow-Closing Solenoid Valves

ASCO Red-Hat

- Max. fluid temp.: 180°F
- Brass body

Slow-closing design reduces the pressure spike and brings the water hammer to a level that eliminates the need for suppressors or other controls. Coil included.

Low-Pressure Normally Closed and Normally Open Solenoid Valves

ASCO Red-Hat

- Brass body with NBR gasket

Ideal for dispensing, collating, gas shutoff, vacuum holding, and tank draining. Normally open valves operate at low pressures with no minimum required; well suited for venting systems. Coil included. CSA and CE Certified; except 4EKU3 is FM Approved, UL Recognized, and CSA Certified.

Pipe Size	Orifice Dia.	Cv	Coil Insulation Class	NEMA Rating	Min. Operating Pressure Differential	Max. Operating Pressure Differential Water	Max. Fluid Temp.	Voltage	Watts	Mfr. Model	Item No.

12VDC, 24VAC, and 240VAC General-Purpose Solenoid Valves

1-pc. molded epoxy coil enclosures have built-in ½" NPT conduit hubs with strain relief. Normally open valves close when energized. Normally closed valves open when energized.

2-WAY

High-flow valves for liquid, corrosive, and air/inert gas service in applications such as car washes, air compressors, pumps, laundry equipment, and industrial water control.

3-WAY

Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from valve actuators and single-acting cylinders.

3-WAY UNIVERSAL

Can connect as either normally open or normally closed to select or direct fluids to different ports.

ASCO Red-Hat®

2-, 3-, and 4-Way Intrinsically-Safe Solenoid Valves

- Coil insulation class: F, except 44U332, 6WTV8, and 4EMC9 are class H

Coil enclosures have a built-in ½" NPT conduit hub with strain relief. Designed to contain internal explosions without causing an external hazard for Type 7 Class 1, Division 1 and 2, Groups A, B, C, and D gases or vapors. Type 9 Class 2, Division 1 and 2, Groups E, F, and G. Normally closed valves close when de-energized. Normally open valves open when de-energized.

2-WAY

Provide high-flow levels for liquid, corrosive, and air/inert gas service.

3-WAY

Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from a valve actuator or single-acting cylinder. For Quick-Exhaust/Universal models air is exhausted through the exhaust orifice to quickly shift control valves to 0 psi.

4-WAY

Have 4 pipe connections, 1 pressure inlet, and 2 cylinder ports that provide pressure to a double-acting cylinder or actuator. A single outlet exhausts pressure from the cylinders.

2-Way Combustion Shut-Off Valves

- Coil insulation class: F

Typical combustible media include natural gas and oil.

Note: Units with Mfr. Models starting with JB have a junction box connection. Mfr. Models starting with SC are DIN connection.

AIR AND FUEL GAS SOLENOID

Lightweight, provide high flow, and ideal for low pressure applications.

FUEL GAS SOLENOID

For control of commercial and industrial gas burners; mount in any position.

FUEL GAS SOLENOID WITH TEST PORT

For control of commercial and industrial gas burners. ⅛" NPT downstream pipe tap with plug for testing.

FUEL OIL SOLENOID

Combustion valves are for the control of both light and heavy oils.

2-Way Cryogenic Solenoid Valves

ASCO Red-Hat

- NEMA rating: 1, 2, 3, 3S, 4, 4X

Normally closed valves are specifically designed to handle cryogenic fluids, including liquid nitrogen, liquid argon, and liquid oxygen. All are degreased, cleaned, tested free of moisture, and blacklight tested for hydrocarbons. Coil included. For use in frozen food and cranial/genetic preservation applications. CSA and CE Certified.

2- and 3-Way Next Generation Solenoid Valves

ASCO™ Red-Hat®

6YEJ5

- Max. fluid temp.: 180°F
- Coil insulation class: H
- Seal material: NBR

Can accept both AC and DC voltages; increase DC pressure ratings to AC levels. Feature lower power operation, voltage ranging, and built-in surge suppression. Design helps eliminate AC hum. Coil included.

3-Way Quick Exhaust Solenoid Valves

ASCO™ Red-Hat®

- Brass body
- Seal material: NBR

Have 3 pipe connections and 2 orifices. Coil included. UL Listed and CSA Certified.

Normally Closed—When the valve is de-energized, the pressure port is closed and the exhaust port is connected to the cylinder port. When the valve is energized, the exhaust port is closed and the pressure port is connected to the cylinder port.

Normally Open—When the valve is de-energized, the pressure port is connected to the cylinder port and the exhaust port is closed. When the valve is energized, the pressure port is closed and the cylinder port is connected to the exhaust port.

Universal—Can be connected in either Normally Closed or Normally Open position. Can also be used to select 1 of 2 fluids, or to divert flow from 1 port to another.

4-Way Solenoid Valves

ASCO™ Red-Hat®

- Coil insulation class: F
- NEMA rating: 1, 2, 3, 3S, 4, 4X
- Coil enclosure voltage: 120VAC, except 44U312 and 44U309 are 24VDC

Single-solenoid valves operate double-acting cylinders. Feature 4 or 5 pipe connections: 1 pressure, 2 cylinder, and 1 or 2 exhausts. Mount in any position. Coil included.

Note: 4-way valves have differential psi for water.

ASCO Red-Hat®

Lead-Free, 2-Way Normally Closed Solenoid Valves

- Max.fluid temp.: 180°F
- NEMA rating: 4X

These durable solenoid valves feature a brass body and a rugged design that provides long life and low internal leakage. This normally closed, 2-way valve has 1 inlet and 1 outlet pipe connection and is closed when de-energized and open when energized. Suitable for use with air, inert gas, light oil, and potable water.

Note: See Mfr. Model number for voltage that applies to each solenoid valve.

PLAST-O-MATIC VALVES, INC.

PVC and Polypropylene Solenoid Valves

- Max. fluid temp: 140°F PVC, 180°F polypropylene

Feature an innovative Fail Dry design that provides a visual warning of seal malfunction. Bellows barrier-type dynamic seal helps prevent fugitive emissions from leaking. Rugged thermoplastic body resists corrosion and has no wetted metal parts. Valves are 2-way and 3-way with spring return. Normally closed and direct-acting with a push-pull plunger design. Can handle pressure drain or vacuum applications (3-way pressure only), without pressure to aid in opening the valve. Pilot-operated valves require a minimum differential of 5 psi. For use in severe service applications with most liquids, including acids, caustics, chlorine solutions, solvents, and ultra-pure fluids. Use with Replacement Solenoid Valve Coils 11K485 to 11K492, sold separately on Grainger.com.

HAYWARD®

SV Series True-Union PVC and CPVC Solenoid Valves

3CDZ4

- 120VAC
- Max. pressure: 120 psi
- Max. flow: 5 fps

Socket/threaded connection operates with no pressure differential; made for operation in harsh, corrosive conditions. Easy-to-replace seal cartridge and plunger assemblies allow quick field repair. Normally closed.

SPENCE

Pneumatic Actuated Globe Control Valves

1RXC3

- Max. steam pressure: 250 SWP
- Temp. range: 0° to 400°F
- 2-pc.; stainless steel seats

Globe-style, severe-duty, high-capacity spring return valves work off increasing 20 psig max. control signal. Valves come with a pneumatic actuator and operate fail-close, air-to-open. Bronze construction and FNPT connection. Use for heating or cooling with air, steam, water, and other liquids. Meet ANSI B16.15 Class 250 or ANSI B16.1 Class 125.

Cast- and Ductile-Iron Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 200 psi
- Buna liner temp. range: 10° to 180°F
- EPDM liner temp. range: -30° to 250°F
- Viton liner temp. range: -20° to 300°F

For commercial mechanical and industrial processes, including hot and cold domestic water, HVAC, condenser and chilled water, and compressed air and vacuum services. Meet MSS-SP67, MSS-SP25, and API-609, except Low-Lead models only meet MSS SP-67, API-609.

Cast-Iron—Heavy-duty, low-torque valves are dead-end service rated at 150 psi; 200 psi for Buna and EPDM lug style.

Ductile-Iron—High tensile and yield strength with positive shutoff. Bidirectional service to 200 psi max.

5MPC5

Electric Actuated
115 VAC
1WDX1

Pneumatic Actuated
1WDX8

Cast- and Ductile-Iron Actuated Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 200 psi CWP
- Temp. range: -20° to 250°F
- EPDM seats and liner, aluminum bronze disc
- Lug style

Use for industrial and domestic applications, including hot and cold domestic water, HVAC, condenser and chilled water, compressed air, and vacuum service. Compatible with ANSI Class 125 and 150 flanges. Electrically actuated 115VAC valves have a reversing motor that requires 50/60 Hz and include a switch that indicates whether the valve is open or closed. Close mount. Can be bolted directly to a single flange piping system. Pneumatic-actuated valves require a 80 psi air supply. Double-acting valves require air to open and close; spring-return valves only require air to open.

Pipe Size	Bolt Circle Dia.	Lug Dia. (in.)	No. of Bolt Holes	115 V AC Item No.	Pneumatically Actuated, Double Acting Item No.	Pneumatically Actuated, Spring Return Item No.

ASAHI/AMERICA®

PVC and CPVC Butterfly Valves

Feature a spherical disc design for greater durability and improved Cv, while the full seat construction helps isolate the body and stem from the media and acts as mating flange gaskets. All gear handles come with a Plasgear operator designed with composite plastic and a black urethane coating for rust and corrosion resistance even when exposed to harsh chemicals.

Carbon Steel Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 285 psi
- Max. steam rating: 150 psi
- Temp. range: -20° to 400°F
- RPTFE liner material
- 316 stainless steel disc material

Use in throttling and positive shutoff applications, with hot water, cold water, and steam. A redundant seal prevents seat from being drawn into the flow stream, especially under high-velocity conditions. Bidirectional, with double dead-end service. Mount in any position. Stainless steel spring. Meet MSS SP-68, ANSI B16.34, and API 609.

PVC Butterfly Valves—Type-57P

ASAHI/AMERICA

- Max. water pressure: 150 psi
- Temp. range: 30° to 175°F
- EPDM liner material
- Polypropylene disc material
- Wafer style

49FD21

Feature a PVC body and polypropylene disc for high chemical resistance and non-wetted 316 stainless steel shaft for long life. The spherical disc design helps provide increased Cv, maximum sealing, and a high cycle life. Molded body stops and a seat stress relief area help prevent seat overtightening. Self gasketing, no additional gasket required. Meet ASTM D1784 Cell Class 12454A and NSF 61 Certified. Find Asahi Flange Gaskets at Grainger.com.

PVC and CPVC Butterfly Valves—BYV Series

HAYWARD

- Max. water pressure: 150 psi
- Temp. range: 32° to 140°F (PVC Body); 32° to 190°F (CPVC Body)

Feature a 1-pc. body and 1-pc. 316 SS stem with threaded retaining gland. Optional 316 SS lugs can be molded into the body for added strength. Lever models have 19 lockable stop positions, and 360° Interlock with Cv and percentage open indicators. For a complete list of standards and specifications, go to Grainger.com and search for individual products. For glass-filled valves go to Grainger.com and search for glass filled polypropylene butterfly valves.

Brass Gate Valves

- Max. water pressure: 200 psi CWP, 125 psi SWP
- Max. temp.: 212°F; 6TWK1 to 6TWK3 are 176°F

Main shutoff valves must be used fully open or fully closed in water and compressed air applications. Nonrising stem can be used in limited vertical space. Brass disc, wedge, stem, and screw-in bonnet. Cast-iron wheel handle. Full port. FNPT connections. Meet NSF/ANSI 61.

Stainless Steel Gate Valves

Ideal for refinery, chemical, and other process applications.

CLASS 150 FLANGED

- Max. pressure: 150 psi steam; 275 psi CWP
- Max. temp.: 450°F

Corrosion-resistant valves feature a flexible gate to assure proper placement; valves can absorb pipe stress without leaking. Rising stem is 316 stainless steel; handwheel is cast-iron. With bolted bonnet and outside screw and yoke. Meet API 603 and ASTMA-351.

CLASS 200

- Max. pressure: 200 psi CWP
- Max. temp.: 365°F

Corrosion-resistant construction with 316 stainless steel nonrising stem, bonnet, body, and wedge. Aluminum handwheels.

CLASS 800

- Max. pressure: 1225 psi steam; 1600 psi CWP
- Max. temp.: 850°F

Forged 316L stainless steel bonnet and body provide excellent corrosion resistance and withstand high pressures and temperatures. Rising stem and wedge are 316 stainless steel; carbon steel handwheel. Feature outside screw and yoke and bolted bonnet. Meet API 602 and ASTM A182.

4HCK7

Aluminum and Cast- and Ductile-Iron Flanged Gate Valves

MILWAUKEE VALVE · NIBCO · WATTS REGULATOR

MILWAUKEE, 4HCK7

- Double disc
- Bronze stem and wedge; aluminum handwheel

Meets TTMA and conforms to MIL-V-58039 Type 1.

MILWAUKEE, CLASS 125

- Cast-iron bonnet, wedge, and handwheel

Meet MSS SP-70.

NIBCO, CLASS 125

- Ductile-iron bonnet, wedge, and handwheel

Low-lead and certified for use in potable water applications. Meet AWWA C509.

WATTS, CLASS 200

- Cast-iron bonnet, wedge, and handwheel

Suitable for throttling. Meet ASTM A126 Class B Iron, AWWA 509, FM, and MSS-SP-70. UL and C-UL Listed.

WATTS, CLASS 250

- Cast-iron bonnet, wedge, and handwheel

Epoxy-coated valve is used in fire protection applications. Suitable for throttling. Meet ASTM A126 Class B Iron, AWWA 509, FM, and MSS-SP-70. UL and C-UL Listed.

Bronze Globe Valves

- Rising stems
- Malleable iron handwheels

MILWAUKEE VALVE

For use in HVAC and other general commercial and industrial utility applications with hot and cold water, steam, compressed air, and gas. Class 125 WOG has threaded bonnet, Classes 150 SWP and 300 WOG have union bonnet. All valves meet MSS SP-80. Body, screw-in and union bonnet, seat disc, disc holder, packing gland, and nut meet ASTM B-62.

CHECK VALVES

- Max. water pressure: 150 psi, except 35ZY65 is 75 psi
- Max. temp.: 73°F

Provide quiet operation and combine the benefits of a spring and a swing check valve. The full-flow design eliminates the restriction of a spring center poppet and allows up to 15% more flow than comparable spring check valves. PVC construction with 316 SS spring. White color, except where indicated in the table.

Water and No. 2 Oil Pressure Regulators

- Max. pressure: 300 psi
- Max. temp.: 140°F

For use in water and No. 2 fuel oil pressure regulation in small, general-purpose piping system applications. FNPT connections. Lead-Free regulators are certified for use in potable water applications.

SERIES LF26A, LEAD FREE BRASS BODY

2-way valves have brass construction and an oversized orifice.

SERIES LF263A, LEAD FREE BRASS BODY AND SERIES 263A, STAINLESS STEEL BODY

3-way valves feature an aluminum spring cage, Buna N stainless steel disc, reinforced Buna N diaphragm, tee handle adjustment, and ¼" low-pressure gauge port.

SERIES SS-263AP, STAINLESS STEEL BODY

Stainless steel body, spring cage, and adjusting screw. Oversized orifice.

Water Pressure Regulators

30PT96

1DMK5

FNPT connections, except 26X143 is FGHT x MGHT.

BRASS

- Max. pressure: 300 psi
- Max. temp.: 140°F

Ideal for use in non-potable water and No. 2 fuel oil pressure regulation in small, general-purpose piping system applications. NBR, EPDM seals and a T-handle adjustment. Series 26A two-way brass valves feature an oversized orifice. Series 263A three-way brass valves have a Buna N disc, Buna N reinforced diaphragm, an aluminum spring cage, and ¼" low-pressure gauge port.

BRONZE

- Max. pressure: 100 psi
- Max. temp.: 212°F

Designed to fill boiler and system piping with water and to maintain water pressure in the system. An innovative push-button fast fill engagement with auto-stop helps prevents over-pressurizing the system. Dial indicator eliminates need for pressure gauge.

LEAD-FREE BRASS

- Max. pressure: 300 psi
- Max. temp.: 140°F

Certified for use in potable water applications.

THERMOPLASTIC

- Max. pressure: 300 psi
- Max. temp.: 150°F

Use in OEM irrigation and industrial applications that require a constant downstream flow. Corrosion-resistant, molded plastic body with 300 Series stainless steel and food-grade rubber internal components.

1RWL4

Pressure Regulators

- Cast-iron body
- FNPT connections, except 49AC45 to 49AC76 are flanged

PRESSURE REGULATORS

- Max. pressure: 250 psi
- Max. temp.: 450°F

For use in steam distribution and pressure control in district heating systems and steam plants. Suitable for single point or multiple use applications and can be used in single-stage, 2-stage, and parallel reductions. 49AC45 to 49AC60 are Class 125, 49AC61 to 49AC76 are Class 250. All models meet ANSI/FCI 70-2 Class IV shutoff, FCI 70-3 Class VI shutoff, ASME/ANSI B16.1.

PILOT-OPERATED

- Max. pressure: 250 psi
- Max. temp.: 450°F

Self-contained for steam line control within ±1 psig of set pressure under varying load conditions. Fitting a sensing line (not included) allows pilot to sense downstream pressure changes and quickly adjust to meet steam demand. All stainless steel internals. Meet ASME B16.1 with ANSI Class 4 seat tightness.

Self-Contained Temperature Regulators

SPENCE

Self-operated, 2-way regulators control temperature of water, steam, or other liquid systems without electricity. Thermal system assembly with gauge, 8" bronze capillary. 1" NPT male union bushing. Adjusting screw and calibration scale allow easy setting. Bronze construction with steel springs and seats. Direct-acting valves are used for heating and are normally open; reverse-acting valves are used for cooling and are normally closed. Galvanized FNPT union end connections. Suitable for heat exchangers, kettles, building heat, bottle-washing machinery, plating tanks, heating ducts, cooking vats, and parts washers.

REPLACEMENT THERMOWELLS

- Inlet connection: 1" MNPT
- Max. pressure: 250 psi
- Max. temp.: -25° to 400°F

Allow for removal of temperature probe without having to drain contents from tank.

WATTS REGULATOR

Apollo Valves

High- and Super-Capacity Water Pressure-Reducing Valves

- Adjustable range: 25 to 75 PSI
- Preset pressure: 50 psi

Feature an enlarged diaphragm and orifice and a spring cage to handle high capacities. FNPT connections. Lead-Free valves are certified for use in potable water applications.

APOLLO, SUPER-CAPACITY

- Max. inlet pressure: 400 psi
- Max. temp.: 180°F

With built-in thermal expansion bypass, adjusting screws, nut, cap bolts, and easy access for maintenance/repair. Meet ASSE 1003, ANSI A112.26.2, CSA B356, and IAPMO.

APOLLO, SUPER-CAPACITY LEAD FREE

- Max. pressure: 400 psi
- Max. temp.: 180°F

Use to reduce incoming water pressure to help protect plumbing system components and reduce water consumption. Feature built-in thermal expansion bypass. Meet ASSE 1003, CSA B356, and NSF/ANSI 372.

Lead-Free Bronze Water Pressure-Reducing Valves

- Max. pressure: 300 psi, except 40D776 to 40D792 are 400 psi
- Preset pressure settings: 50 psi, except for 49EL62
- Max. temp.: 140°F, except 40D776 to 40D831, 49EL62 are 180°F

Feature a balanced piston design that allows valves to react in a smooth and responsive manner to changes in system flow demand, while also controlling inlet pressure changes. 22N570 to 22N575 have a direct-acting bypass design to help prevent excessive pressure buildup caused by thermal expansion. Include a bypass check valve. All valves have a high-flow capacity and are suitable for use in industrial water lines and commercial irrigation systems. Find Repair Kit contents at Grainger.com. Certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com and search for individual products.

T&P Valves

- Max. temp.: 210°F

Provide automatic temperature and pressure protection for hot water heaters and supply tanks. Test lever allows pressure checks during operation. ASME rated, CSA Certified, and meet ANSI Z21.22.

STANDARD SHANK

4P947 meets FHA requirements and Mil. Spec. MIL-V-136-12D, Type 1.

EXTENDED SHANK

Use with water heaters containing thick insulation.

Standard Shank
2XLA3

Extended Shank
3EEX3

ASME Section IV Steam Low-Pressure Safety Relief Valves

- Pressure range: 5 to 15 psi; factory preset to 15 psi
- Max. temp.: 250°F

High-capacity valves for medium- and large-size heating boilers. Cast-bronze construction and MNPT x FNPT connections. ⅜" NPT side tapping for drain connection. Suitable for industrial and commercial applications. Meet ASME Section IV, CSA, and CRN.

Safety Relief Valves

Nonmechanical seat-to-disc alignment. FNPT connections, except 46A979 is union solder connection.

FILL AND RELIEF

- Max. water pressure: 100 psi
- Max. temp.: 212°F

Fully adjustable from 10 to 25 lb. Include strainer screen. Cast-iron body, painted bronze.

SAFETY RELIEF

- Max. temp.: 250°F

Drain seal eliminates water trapping and sediment fouling. Heat-resistant diaphragm isolates springs and working parts from water during release. Brass springs, Buna N disc.

174A Series—Meet Mil. Spec. MIL-V-136-RD, Type III, as well as ASME, NB, and HV, except 26X179 to 26X195 meet ASME Section IV only.

374A Series—Forged bronze inlet. Meet Mil. Spec. MIL-V-18634B, Type I, Class 3A, Style A, Bronze Body, as well as ASME.

740A Series—Expanded outlets. Meet Mil. Spec. MIL-V-18634B, Type I, Class 3A, Style A, Bronze Body, as well as ASME, except 26X150 to 26X157, 26X160, and 26X161 meet ASME Section IV only.

ASME Section IV Safety Relief Valves

- Pressure range: 15 to 160 psig
- Max. temp.: 250°F

Protect against excessive water pressure due to failure of controls to regulate BTU input. High BTU capacity rating. Bronze body and cover. Corrosion-resistant with silicone seat. Fabric reinforced, molded diaphragm isolates spring from water at all times. FNPT connections. Designed for boilers, heating systems, and unfired pressure vessels. Meet ASME Section IV, CSA, and CRN.

Aquatrol H7203

Apollo D4489

Kunkle D4476

ASME Section I Steam and Section VIII POP Safety Relief Valves

Valves are factory preset and sealed to prevent tampering. Not adjustable. MNPT x FNPT connections.

Note: For ASME Certified valves custom set to other pressure settings, call 1-800-GRAINGER (472-4643).

KUNKLE

- Temp. range: -60° to 406°F

Pivot between disc and spring helps correct misalignment. ASME Section I has ethylene propylene seals; ASME Section VIII has Viton® seals. For air/gas compressors, steam boilers, and generators.

APOLLO

- Temp. range: -320° to 800°F (stainless steel), -320° to 406°F (bronze)

Full-nozzle design can be used in closed systems. Metal-to-metal seating. Ideal for pressure vessels and pressure piping systems. Packed lever allows manual operation/testing as required by ASME code for steam, air, and hot water above 140°F service. Screwed cap are not for use with air, steam, or water above 140°F, where a packed lever must be used.

AQUATROL, ASME SECTION VIII

- Temp. range: -320°F to 406°F

High-capacity, multipurpose valves with a dual lapped disc for improved seating tightness. Stainless steel disc and spring.

Series 69 Relief Valves

Aquatrol

- Max. temp.: 450°F

Field-adjustable pressure is factory set to midrange for minimal effect on flow capacity rates. Adjustment requires no disassembly; simply remove hex cap. Closed bonnet, sealed hex cap, and lapped metal seating eliminate leakage. Stainless steel springs. MNPT x FNPT connections. For pressure relief, liquid relief, continuous bypass, and overprotection for pumping stations, tanks, hydraulics, fluid, and pipelines.

ASME Section VIII Air and Inert Gas Safety Relief Valves

- Pressure range: 0 to 250 psig
- Max. temp.: 406°F

Bronze valves have bronze discs, stainless steel springs, and precision lapped bronze seats. Single-ring blowdown assures quick, accurate reseating when opening/popping. MNPT x FNPT connections. For use in air compressors, pressurized production lines, and tanks. Series 88 models feature valve handle that allows field testing and simple cleanout. Series 89 models include sealed and closed hex cap.

Note: Valves are factory preset and sealed to prevent tampering. Not adjustable.

Calibrated Pressure and Vacuum Relief Valves

5DLZ1

Calibrated pressure and vacuum relief have a brass body and stainless steel spring. Lead-free valves are certified for use in potable water applications. Liquid relief valves are bronze and have metal-to-metal seat.

CALIBRATED PRESSURE, SERIES 530

- Pressure range: 50 to 175 psi
- Temp. range: 0° to 180°F

Protect against excessive pressure buildup in systems that contain water, oil, or air. Use for bypass thermal relief. Buna N disc. Lead-free, except 2X318. NSF Listed and FDA Approved, except 2X318 meets ANSI Z21.22.

Note: Not to be used as an operating control.

LEAD-FREE VACUUM RELIEF, SERIES N36

- Max. pressure: 15 psi steam; 200 psi water
- Temp. range: 0° to 250°F

Automatically vents closed system to atmosphere. Prevents vacuum conditions that could siphon water from the system. Silicone disc. For water heaters, supply tanks, unit heaters, and low-pressure steam systems. NSF Listed and FDA Approved.

LEAD-FREE VACUUM RELIEF VALVE, CASH ACME

- Pressure range: 0 to 200 psi
- Temp. range: 0° to 210°F

Ideal for protecting pressure vessels and hot water supply systems against negative pressure. Silicone disc. Suitable for use in many commercial and domestic systems. Meets ANSI Z21.22 and is CSA 4.4 Certified.

LIQUID RELIEF, SERIES 55

- Pressure range: 0 to 100 psi
- Temp. range: 0° to 450°F

Small valve can be adjusted in the field by removing the hex cap. Bronze disc is lapped into position to minimize leakage. For liquid relief lines, tanks, sprinkler systems, and overprotection.

Bronze & Brass Y Strainers

Brass
20XM11

- Mesh screen
- 304 stainless steel screen
- NPT connection

Strainers protect pumps, valves, and other process equipment from contaminants found in water, oil, gas, and steam applications.

Bronze Y Strainers resist corrosion from saltwater and have higher heat and electrical conductivity than most metals.

Brass Y Strainers are an alloy of copper and zinc that withstands high temperatures and corrosion from water, heat, acids, and minerals.

HAYWARD

CPVC Basket Strainers, DB Series

- NPT & Push-In Socket Multi-Connection
- Dual strainer
- Hard removable cover
- CPVC screen
- Max. pressure @ 100°F: 130 psi

Nontoxic chlorinated polyvinyl chloride strainers are made from a rigid thermoplastic resistant to most acids, bases, halogens, oxidants and salts. They remove large particulates and debris from water and pipelines in hot and cold potable water applications. FPM gaskets.

HAYWARD

Eastar Basket Strainers, SB Series

- NPT & Push-In Socket Multi-Connection
- Single strainer
- Hard removable cover
- PVC screen
- Max. pressure @ 100°F: 65 psi

Eastar strainers resist corrosive and sensitive media, plus withstand changes in temperature and humidity. Clear material allows for easy monitoring of debris collected on screen without disconnecting the pipeline. They remove large particulates and debris from water, process liquids, and pipelines in high-flow industrial processes. EDPM gaskets.

SSI

Carbon Steel Basket Strainers, 300B Series

- NPT connection
- Single strainer
- Bolted cover
- 304 stainless steel screen
- Max. pressure @ 100°F: 740 psi

Extremely strong steel strainers resist high pressures, high temperatures, and leaks, and withstand mechanical shocks and stress. They remove large particulates and debris from water, process liquids and pipelines in oil and petrochemical industries. 304 stainless steel gaskets.

MILWAUKEE VALVE

FNPT 6VDT3

Brass and Lead-Free Brass Swing Check Valves

- Max. pressure: 200 psi CWP nonshock

Allow flow in 1 direction and prevent fluid backflow. Brass seals and seats, except 6VDT3 to 6VDT8 have PTFE seals. For use in plumbing and heating applications. Multipositional models meet NSF/ANSI 372.

Note: For use only with fluids compatible with the valve materials of construction; not for use with reciprocating air compressor service.

BONOMI
NORTH AMERICA, INC.

316 Stainless Steel Check Valves

- Max. pressure: 125 psi SWP
- Cracking pressure: 0.5 psi
- Max. temp.: 450°F

Valves allow flow in only 1 direction to prevent backflow, while the spring-actuated design allows fast seating action. FNPT connections. Dual guided stem and disc plus a soft PTFE seal for a bubble-tight shutoff. The 316 stainless steel body and spring are corrosion resistant and suitable for use with chemicals. Valves can be mounted vertically or horizontally.

Bronze, Lead-Free Bronze, and 316 SS Cone Spring Check Valves

Apollo Valves

- Max. pressure: 125 psi steam, 400 psig CWP
- Cracking pressure: ½ psi

Straight-through design assures minimum change in velocity and protects against reverse flow. Stainless steel springs. Reinforced RPTFE ball check. 40D886 to 40D888 have EPDM seat. 40D878 to 40D885 have RPTFE seat. All models mount vertically or horizontally. FNPT connections. Lead-Free check valves are certified NSF/ANSI 372 and certified for use in potable water applications.

Bronze
1CKT5

Note: Not recommended for use with reciprocating pumps and similar applications that may induce repetitious vibrations.

Lead-Free Bronze, Inline-Bubble Tight
40D886

Bronze and Lead-Free Bronze Spring Check Valves

MILWAUKEE VALVE

Spring-actuated valves open and close by liquid flow and allow flow in only 1 direction to prevent backflow. Bronze body. Can be mounted vertically or horizontally.

Note: Check valves are not for use with reciprocating air compressor service.

APPROVED VENDOR

- Max. pressure: 200 psi CWP
- Max. temp.: 250°F

When mounted vertically, valves must be positioned for flow up only.

MILWAUKEE VALVE

- Max. pressure: 250 psi non-shock CWP
- Max. temp.: 353°F

Silent closing design to reduce water hammer. Certified for use in potable water applications.

Note: Find more Milwaukee Valve items at Grainger.com®; search for "Milwaukee bronze swing check valves".

SSI
Mueller Steam Specialty™

Triple-Duty 1RXE3

Heavy-Duty Check Valves

- Max. pressure: 200 psi

TRIPLE-DUTY

- Max. temp.: 212°F

With spring-loaded silent check valve, balancing valve, and shut-off valve. Center-guided Buna N seal disc ensures leak-free performance. For pump protection and HVAC chilled water installations. Meet ASME B16.1.

SILENT

- Max. temp.: 300°F

ASME Class 125 wafer-style valves prevent flow reversal; eliminate water hammer and system surges. EPDM seal and O-ring. Vertical or horizontal mount. For liquid service use in HVAC, power, process, chemical, and waste industries.

SURE CHECK

- Max. temp.: 100°F

Class 125 valves prevent surge and water hammer due to flow reversal; specially designed springs close discs before flow reversal can occur. With stainless steel springs and Buna N seal. Mount vertically or horizontally. Designed to fit ANSI flanges. Suitable for liquid and gas service applications. Meet ANSI and FM Approved.

SPRING-LOADED/DUAL-DOOR

- Max. temp.: 250°F (cast iron); 600°F (stainless steel)

Wafer-style ASME Class 125 and Class 150 flanged valves fit between flat-face and raised-face flanges; reduce water hammer, surge, and backflow in piping systems. Cast-iron models have bronze or stainless steel disc and stainless steel spring. 316 stainless steel models have stainless steel disc and spring. For use in liquid and air service in industrial process, wastewater, and pulp and paper industries. Cast-iron are FM Approved; stainless meet API 594.

Condensate Coolers, T-Line Strainers, and Float Type Air Vents

CONDENSATE COOLERS

- Max. pressure: 150 psig
- Max. temp.: 180°F

Use to mix hot water or hot condensate with a cold water supply to help reduce the temperature to an acceptable level. Can cool to a preset temperature of 135°F, or field set to a desired temperature. Suitable for most plumbing systems.

T-LINE STRAINERS

- Max. pressure: 400 psi
- Max. fluid temp.: 500°F

Feature a larger open screen area and can trap particles that harm valves and other sensitive equipment in your steam or refrigeration systems. Corrosion-resistant stainless steel.

FLOAT TYPE AIR VENTS

Free-floating air/gas vents provide positive venting of air/gases under pressure. Corrosion-resistant, stainless steel vents feature a positive-closing lever to help ensure a leaktight closing. Body and caps are welded together to form a permanently sealed, gasketless, and tamper-proof unit.

Steam Traps

Inverted bucket steam traps feature a free-floating valve mechanism with no fixed pivots to wear out. They are low maintenance and designed to handle dirty steam for reliable service and long life.

Float and Thermostatic steam traps are not affected by wide or sudden pressure changes, respond quickly to condensate load changes, and can function under high back pressure conditions.

Mepco—Disc steam trap allows easy maintenance, inspection, and a 1-pc. thermodynamic cartridge can be replaced without removing the trap from the line. Durable and can withstand the effects of superheat, vibration, water hammer, and corrosive environments.

Armstrong—Inverted bucket steam traps feature an innovative leverage system that multiplies the force provided by the bucket to open the valve against system pressure. Design can provide reliable operation and efficient condensate drainage on most types of steam equipment.

Cast-Iron and Ductile Iron Float and Thermostatic Steam Traps

Armstrong

- Cast-iron body, except 36Y278 to 36Y281 are ductile iron

Feature stainless steel internals for long life in applications where continuous drainage with high air-venting capacity is required. Horizontal Same Side models feature inlet connections on both sides of the body to provide flexibility in piping.

Horizontal In-Line
36Y266

Note: Steam traps are not for use in systems where excessive hydraulic or thermal shock are present.

Thermostatic Steam Traps

Design allows trap to be inspected and serviced without breaking pipe connections. Armstrong models have one moving part, while Mepco models feature an innovative floating valve design and rounded seat to help prevent corrosive elements and dirt from affecting trap operation. All models respond quickly to changing pressure and condensate loads and are suitable for use in many steam heating systems and steam process equipment.

Hose and Laboratory Connection Vacuum Breakers

6KK08

Prevent backsiphonage of contaminated water into water supply. No need for plumbing changes. Suitable for hot or cold water service. Single-check design. 5DMJ5 is certified for use in potable water applications. 6KK09 and 6KK08 have 2 independently acting soft-seated checks. 6KK09, 6KK08, and 6AJZ3 come with a break-off attachment screw for permanent installation. All models meet ASSE; except 5DMJ5 meets CSA only; 6AJZ3, 6A766, 6LL80, and 6LL79 also meet ANSI; 6KK08, 6KK09, 6A766, 22N566 and 22N567 also meet IAMPO; 6A766, 6LL80, and 6LL79 also meet UPC; 6KK09, 6KK08, 6A766, 6LL80, and 6LL79 also meet CSA.

6KK03

Atmospheric-Type Vacuum Breakers

- Max. pressure: 125 psi

Prevent back-siphoning of polluted water into potable water systems and are corrosion-resistant forged-brass construction, except Nicholson® models help protect plant and process equipment against vacuum conditions typically associated with cooling applications. Nicholson models also promote better heat transfer efficiency, allow condensate to be drained from steam systems, and are for use in heat exchangers, jacketed kettles, steam mains, and other process equipment.

Note: Only install in areas where water spillage will not cause damage. Not for continuous-pressure applications.

Apollo, Lead-Free Bronze and Lead-Free Bronze Rough Chrome—40D832 to 40D836 are certified for use in potable water applications. All models meet ASSE 1001 and NSF/ANSI.

Apollo, Rough Brass and Rough Brass Polished Chrome—Meet ASSE 1001.

Watts, Lead-Free Brass—Certified for use in potable water applications. Meet ASSE 1001 and ANSI A112.1.1, CSA B64 Certified; except 46A958 and 46A957 meet ASSE 1001 and are CSA B64.1.1 Certified only.

Zurn Wilkins, Cast Brass and Cast Bronze—Certified for use in potable water applications. Meet ASSE 1001 standards and CSA Certified; IAPMO Listed.

6AJV6

Backflow Test Kits

- Accuracy: ±2 psid (descending), except 5AJ67 is accurate ±1% of full scale

For testing reduced pressure principle, pressure vacuum breaker and double check valve backflow prevention assemblies. 6AJV6, 34CU34 and 34CU33 have soft-seated brass needle valves with replaceable valve seats and cleanable 90-micron filters that reduce plugging with scale, sand, and other contaminants. Capable of performing all known test procedures including those recommended by ASSE, AWWA, FCCC, HR-USC, and NEWWA. 34CU34 allows you to perform tests with the gauge mounted in carrying case, or gauge can be easily removed for added portability. 34CU34 and 34CU33 include 3 sets of brass fittings for hookup to all standard size test cocks. 20RJ62 fits ¼" to 2" backflow preventers and includes three ¼" plastic quick test fittings and O-rings.

WATTS REGULATOR ZURN WILKINS

Reduced-Pressure Zone (RPZ) Backflow Preventers

- Max. pressure: 175 psi
- NPT connections, except 5DMJ0 to 5DMJ4 have IPS, 15W053 to 15W055 have flanged end
- Find information on kit contents at Grainger.com

Help prevent the reverse flow of polluted water into the potable water supply due to backsiphonage and backpressure.

Watts 009 Series—6A771 is the M1 version of the 009 Series. 429J28 to 429J30 meet ASSE, CSA, and are 3-UL Classified. 5DMJ0 to 5DMJ4 meet ASSE, AWWA, CSA, IAPMO Foundation for Cross-Connection Control and Hydraulic Research at USC. 6A770 and 6A771 meet ASSE 1013, AWWA C-511-92, CSA B64.4, and IAPMO. 26X125 to 26X140 meet ASSE, CSA, UPC, and USC.

Zurn Wilkins 375XL Series—Models have a pressure differential relief valve located between 2 independently operated spring-loaded centers. Meet ASSE 1013, IAPMO, CSA, and USC. NSF-61 Listed.

Watts 909 Series—2½" to 4" models have flanged end connections. Meet ASSE 1013, AWWA C-511-92, CSA B64.4, except 26X122 also meets UPC and USC.

Zurn Wilkins 975XL2 Series—Top entry allows easy access to internal components. Meet ASSE 1013, CSA Certified, IAPMO Listed, and NSF-61 Listed Annex G.

Zurn Wilkins 975XL Series—Provide protection where a potential health hazard exists. Meet ASSE 1013, IAPMO, CSA, FM, and USC.

Air Gaps—Provide an unobstructed separation between potable water supply discharge and receiving vessel opening.

Repair Kits—Include disc assemblies, O-rings, and diaphragm.

Test Cocks—Use to facilitate backflow assembly testing or as isolation valves for gauges or small equipment lines.

RPZ Backflow Preventers with Composite or Ductile Iron Body

ZURN WILKINS

- Max. pressure: 175 psi
- Max. temp.: 180°F; except 6AVY4 to 6CUN5 are 140°F
- For kit contents, go to Grainger.com

Designed for installation on potable water lines to protect against both backsiphonage and backpressure of contaminated water into the potable water supply. Assemblies provide protection where a potential health hazard exists. Removable pressure vessel allows for easy repair and maintenance. Composite materials reduce the amount of bronze in the valve providing a built-in antitheft feature. Meet ASSE 1013, IAPMO, CSA, and USC.

Lead-Free Reduced-Pressure Zone (RPZ) Backflow Preventers

Apollo Valves

- Max. pressure: 175 psi
- Max. temp.: 180°F
- Bronze body

Top-mounted test cocks. Backflow preventers are certified for use in potable water applications Meet ASSE 1013, USC, FCCCHR, and ARRA; UL Classified when ordered without ball valves.

Repair Kits—Use to replace all elastomer parts in assemblies. Include O-rings, seat, and diaphragm relief valve.

Air Gap Drain Kits—Funnel minor relief valve discharges into the drainage system. Threaded connections.

Replacement Test Cock—Use to facilitate backflow assembly testing or as isolation valves for gauges or small equipment lines.

HOT BOX · NDS We put water in its place

Valve Enclosures and Boxes

Valve Enclosures—Help protect backflow protection devices, valves, and pumps from freezing. The vandal-resistant access cover is hinged; lockable. Drain openings accommodate maximum RPZ discharge. 120V. Unit can be anchored to a concrete pad. Meets ASSE 1060.

Valve Boxes—Protect irrigation valve and the overlapping cover keeps debris from between the body and cover. Rugged PVC construction with fade-resistant finish. For use in commercial, residential, and municipal landscape applications.

Meter Boxes—Ideal for protecting underground water meters and constructed of rugged, injection molded, recycled structural foam polyolefin material. UV inhibitors help prevent discoloration and cracking. The corrugated sidewalls help provide greater strength, while the reinforced covers keep out debris and can handle heavy loads.

Lead-Free Point of Use Mixing Valves

Hot water temperature control valves are specifically designed for mixing cold and hot water on hot water supply systems. Can be used to reduce the temperature of hot water from the system, and are ideal for radiant heat and under-the-sink applications. All models are certified for use in potable water applications.

Automatic Air Vent Valves, Air Separators, and Boiler Feed Valves

Automatic Air Vent Valves, Brass—Provide automatic air venting for cold or hot water distribution systems. Valve can be disassembled for maintenance.

Automatic Vents for Hot Water, Brass—Allows easy replacement cartridge installation without system shut down. Suitable for automatic or manual air release on baseboards, convectors, radiators, and high points in piping systems.

Air Separators, Iron—Designed to separate air from water in hydronic heating systems. Separators have tappings that allow installation of an air vent and expansion tank.

Boiler Feed Valves with Backflow Preventer, Cast-Iron—Combination backflow preventer and feed water pressure regulator in 1 pre-assembled unit.

Pressure-Reducing Control Valves

- Operating temp.: 180°F
- Adjustment range: 30 to 300 psi

Ductile iron body and cover. Stem, spring, and nut are stainless steel; trim is 316 stainless steel. Buna N elastomer. Meet ASTM A536. NSF Listed.

Full Port—Throttles to reduce higher upstream pressure to constant lower stream pressure. Adjustable closing speed and reducing setpoint.

Single Chamber—Fixed orifice with nonadjustable closing speed and set point.

Air Release and Air Vacuum Valves

- Max. temp.: 250°F
- Vacuum pressure: 29” Hg
- FNPT connection

Cast-iron construction. Float and internal components are 316 stainless steel.

Air Release Valves—Resilient seal for positive shutoff. Nonclogging design helps eliminate backwash. Releases pockets of accumulated air in a pressurized water system.

Air Vacuum Valves—Have high/low pressure resilient seating. Full pipe size inlets and outlets help prevent clogging. For use in water distribution and transmission and vacuum protection.

Air Release/Air Vacuum Valves—Incorporate both an air release valve and an air vacuum valve into 1 compact unit. Suitable for all high points in a water distribution transmission system.

Mixing Valves

Certified for use in potable water applications.

Powers—Feature paraffin-based, advanced thermal actuation design to sense and adjust outlet temperature for precise temperature control. Virtual shutoff if supply pressure fails. Vandal-resistant locking mechanism. Rotatable union triple-duty checkstops.

- Max. pressure: 125 psi
- Temp. range: 90° to 160°F

Watts—Uses a double throttling design to control both the cold and hot water supply to the mixed outlet. Includes an adjustment cap with locking feature.

- Max. pressure: 150 psi
- Temp. range: 80° to 120°F

Lead Free Hot Water Distribution Systems

TM Series (29JA78): Single valve is highly responsive to temp. changes. Bi-metal thermostat.

XL Series: Single valve for high and low water flows. Wax thermostats with ball valve and dial thermometer.

LV Series: Single valve master mixing valve. Wax thermostat.

TM Hi-Lo System Series (29JA79 to 29JA84): 2 valve system for low and high water demands. Bi-metal thermostat.

All models are ideal for industrial and commercial applications. Certified for use in potable water applications and meet ASSE 1017.

Hose Stations and Accessories

45K810 and 45K811 are specially designed for use with live steam and water, and have an automatic shutdown feature if cold water supply is interrupted. 45K812 and 45K813 feature a thermostatically controlled valve that helps to maintain a constant temperature. 45K816 and 45K823 are manually blended models that can handle both hot water or steam for blending. Hose stations are for use in dairy, food processing, manufacturing, and pharmaceutical plants and in other industrial washdown applications.

Float Valves

Automatically open or close when liquid reaches a predetermined level. Can be used for filling control (close on level rise) or drainage control (open on level rise), in an open or closed tank, storage tanks, cooling towers, and reservoirs. NPT connection. Float is 304 stainless steel construction.

Type 7—Suitable where tight-closing valves are required. Not for use with chemicals harmful to brass, iron, or neoprene. Max. temp.: 125°F,

Type 27—Use for automatic control of liquid supply to an open tank, where dead-end closing is not essential and where valve pressures are normal. Max. temp.: 406°F.

Type 77—Suitable where tight-closing valves are required. Not for use with chemicals harmful to brass, iron, neoprene, or leather. Angle pattern will have a bottom inlet/side outlet. Max. temp.: 125°F.

WATTS REGULATOR

Bronze Float Valves

- Brass rod

These heavy-duty float valves are ideal for the reliable control of liquids in cooling towers, open tanks, reservoirs, or vats. Models feature a float arm that adjusts easily to control the water level. 52WY27 to 52WY54 include a float that can be set anywhere in a 360° circle around the valve body. 2ZDN3 to 2ZDN5 are bulkhead-mount and have a machined flange on inlet side with male straight pipe threading for locknut. 46A987 to 46A989 can be tank wall mounted.

Stainless Steel Float Valves

- Stainless steel rod

High-capacity float valves are ideal for use with caustic fluids and in sanitary applications. Feature an adjustable short arm for customizing water level. Pipe mounting. Bob branded items are NSF compliant.

PVC Float Valve Assemblies

- Max. pressure: 100 psi

BULKHEAD MOUNTING

MA models can be mounted vertically. M models have a 0.093" orifice with a free-flow outlet. Estimated flow rate of 1.3 gpm at 40 psi. Polyethylene float attached to valve.

BULKHEAD AND PIPE MOUNTING

Valves resist corrosion, have no diaphragms to clog, and are NSF-grade PVC. Seals are chemical-resistant, and hardware is 18-8 stainless steel to resist corrosion. Floats and rods sold separately on Grainger.com.

Hose Bibbs

QUARTER TURN AND LOOSE KEY

- Max. pressure: 125 psi CWP at 100°F, except 6GXC5 to 6GXC9 are 125 psi CWP
- Max. temp.: 180°F

Have chrome-plated brass ball, PTFE seats, and ¾" GHT connections. 6GXC5 to 6GXC9 meet NSF/ANSI 61-8, ANSI B1.20.1, B1.20.7, B16.18. 1APV8 is CSA Certified. 1APY1 meets ANSI/NSF 61-9.

VALVE LOCK

Protects hose bibbs from tampering and fits on most hose end valves. Zinc construction. Includes 2 keys and 1 serialized lock. For keyed-alike locks, call 1-800-GRAINGER (472-4643).

Heavy-Duty Float Balls

Copper—For use in water applications and open tank. Not for pressurized or high-temperature applications. Operating temp.: 50° to 180°F.

Plastic—Nonelectrolytic floats are highly corrosion-resistant. All injection-molded, polyethylene construction resists sunlight deterioration. 2ZDU6 and 2ZDU7 have 2 float balls attached together.

Polyethylene—Resist corrosion and sunlight deterioration. 4DMF5 to 4DMF9 are suitable for open tank service. 46C005 is unaffected by salts and caustic fluids. All models have a 100°F max. liquid temp., except 46C005 is 140°F.

Stainless Steel—Resist corrosion. Suitable for open and closed tank use, and high-pressure and high-temperature applications. Operating temp.: -30° to 225°F.

Roof and Yard Hydrants

- Outlet size: ¾" hose

Campbell, Frost Proof, Lead Free Yard Hydrants—Self-draining to prevent riser pipe and hydrant head freeze-up. Solid bucket hook and oversized head and handle with snap lock, 1-pc. Buna N plunger, handle-to-head padlock locators, and 7⁄16" steel rod in 1" galvanized riser pipe.

Woodford, Iowa Frost Proof Yard Hydrants—Water flows even in subzero temps. and drains when water is shut off and hose removed. Large nitrate plunger for positive shutoff. Graphite packing. Adjustable lever lock tension. ⅜" galvanized steel pipe operating rod, and 1" galvanized steel pipe casing.

Woodford, Frost Proof Roof Hydrant—Provides water for most types of roof equipment even in subzero temperatures. Hydrant drains when water is shut off, even with hose attached. Must be piped to drain location. Large nitrate plunger for positive shutoff. Graphite packing. Adjustable lever lock tension. Includes cast-iron roof support, flanges, mounting bolts, nuts, and washers. EPDM well seal boot seals tight between the hydrant support and hydrant pipe. Meets ASSE 1052.

Backflow Protected Freezeless Wall Hydrants

6CHX1

- Max. pressure: 125 psi
- Max. temp.: 120°F

Commercial-grade wall hydrants are antisiphon vacuum breaker protected, and drain when shut off, even if hose is still attached. A 1-pc. valve plunger accurately controls both flow and drainage without the need for additional adjustments. Chrome-plated brass and copper construction. Solid brass operating rod. Hardened stainless steel stem resists damage. ¾" male hose thread. ¾" FPT pipe connection. Include tee to operate hydrant. 6CHX1 to 6CHX3 and 6CHX5 come with a chrome-plated brass box. All hydrants meet ASSE 1019 Type B, IAPMO listed.

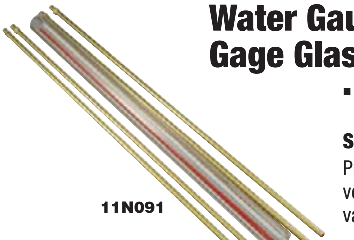
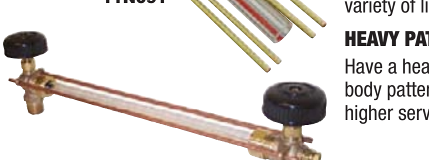
Water Gauges and Tubular Gage Glass and Rod Kits



11N091



2EET2

- Water gauges: MNPT connection

STANDARD PATTERN

Provide liquid level verification for a wide variety of liquids.

HEAVY PATTERN

Have a heavier valve body pattern for higher service ratings.

AUTOMATIC

Ball checks restrain fluids in the event that the glass should break. 2EEU3 is CRN Registered.

TUBULAR GAGE GLASS AND ROD KITS

- Max. pressure: 400 psi
- Max. temp.: 300°

For use with gagecocks where liquid level monitoring is required. Red Line Glass allows easy viewing of fluid. Each kit includes 4 bronze rod guards and 1 borosilicate glass tube. Can be used with a variety of fluids in chemical, petrochemical, and processing applications. Meet ASME standards and boiler codes.

PENBERTHY

Straight Pattern Gagecocks

- -20° to 500°F
- ⅜" FNPT drain connection
- MNPT vessel connection
- Sold in pairs

For use where liquid level monitoring is required (use with Tubular Gage Glass and Rod Kits sold on page 2912). Gagecocks have an automatic ball-check shutoff that helps prevent rapid loss of fluid from accidental glass breakage. Needle drain valve, integral bonnet, and drain cock construction. Rigid vessel and stuffing box gage connections. 3½" max. height. For use with a variety of fluids in heavy/light industrial, municipal, petrochemical, and utility applications. Meet ASTM.

Lead-Free Water Hammer Arrestors

WATTS REGULATOR

- Max. pressure: 150 psi
- Temp. range: 33° to 180°F

Control water pressure shock and prevent water hammer conditions. Install in new or existing plumbing systems at any angle. Ideal in dishwashers, clothes washers, and quick-closing faucets. Certified for use in potable water applications. 11Y819 to 11Y822 are IAPMO Listed.

Parker EATON

Brass Saddle Valves and Needle Valves

4GU27

6MM66

SADDLE VALVES

- Temp. range: -30° to 250°F

Provide a water supply for humidifiers, refrigerators, automatic ice makers, and similar applications. Valves come complete with fittings for ¼" O.D. copper tubing or ¼" O.D. plastic tubing, brass tubing inserts, and instructions. Brass valve, stainless steel pin.

Self-Piercing—Easily installed on ⅜" to 1⅜" O.D. copper tubing. Not for iron pipe.

Self-Piercing Kit—Quick and easy to use. Includes 25 ft. of ¼" O.D. polyethylene tubing, saddle valve, and brass adapters and inserts.

Nonself-Piercing—Installed on ½" or ¾" galvanized water pipe by drilling ¼" hole in pipe, installing pilot tube, and tightening.

NEEDLE VALVES

- Max. pressure: 150 psi
- Temp. range: 0° to 250°F, except Parker brand valves are -45° to 250°F

For use in hydraulic and pneumatic systems. Designed for automotive and industrial applications. Standard style, brass construction with steel handles. Valves come complete with nuts and sleeves. Parker brand valves feature metal-to-metal seats with fine thread screw down.

ANDERSON FITTINGS

Seat Drain Cocks

All feature sturdy brass construction.

INTERNAL SEAT POSITION

Designed for automotive or industrial use. Not intended for natural gas, LPG, or nuclear applications.

EXTERNAL SEAT POSITION

Used on air compressor receivers, condensate separators, radiators, and many other similar applications.

MNPT X HOSE, 1VPY5 TO 1VPZ1

Angled body style and ideal for venting or draining air and water.

ANGLE BODY STYLE

Designed for automotive and similar industrial water-handling applications. Hand tighten for leak-free connection.

Brass Ground Plug Valves

Parker

- Max. pressure: 30 psi
- Temp. range: -65° to 250°F, except Parker valves are 32° to 125°F

Ideal for use in automotive and industrial applications. Approved Vendor valves feature a universal lubricant satisfactory for most common fluids. All Parker valves are manufactured from forged bodies or castings for greater strength.

Light-Duty Industrial Pedestal Fans

Dayton airmaster Fans

- Ball bearings
- OSHA-compliant wire guards

These fans cool light manufacturing areas, warehouses, and other dry, clean spaces.

DAYTON

Fan heads have locking tilt adjustment for directional air flow.

Foldable Pedestal—Fan head unfolds into upright position. Fully assembled fans feature pedestal with plastic wheels for roll-about portability.

Quiet-Design—Provides high-velocity air flow in settings such as schools, libraries, churches, offices, or other quiet environments. Adjustable-height pedestal included.

AIRMASTER

Adjustable-height pedestal included.

Dayton BIG ASS FANS airmaster Fans SCHAEFER

Standard-Duty Industrial Pedestal Fans

- OSHA-compliant wire guards

Used to cool heavy manufacturing areas and other dusty or dirty environments.

DAYTON

- Ball bearings

Include mounting hardware.

Quiet-Design—Provides high-velocity air flow in settings such as schools, libraries, churches, offices, or other quiet environments. Adjustable-height pedestal included.

BIG ASS FANS

Select models feature an occupancy sensor (where noted). Fans with an ion kit have a bipolar ionizer that generates ions to destroy most pathogens in the air and on surfaces.

AIRMASTER FAN

- Ball bearings

SCHAEFER

- Sealed ball bearings

Include mobile cart with 8" pneumatic casters.

7DJ29

High-Visibility Industrial Pedestal Fans

Dayton

- Non-oscillating
- 115VAC
- Totally enclosed motors
- Ball bearings
- OSHA-compliant wire guards

Safety-yellow finish attracts attention to help prevent accidental damage to the fan. Pedestal adjusts from 41½" to 59". Fans include an extension cord (15 ft. for 7DJ29 and 14 ft. for 7DJ33) and a 3-position drop cord switch.

Guards for Industrial Cooling Fans

Dayton

- OSHA-compliant polyester powder-coated wire guards

Replacement guards enclose fan blades to protect them from damage and prevent injuries from accidental contact. Guards mount to thru-bolts on yoke-mounted or rigid-base motors. Rear section of guard has 4 mounting slots to accommodate motor thru-bolts.

Note: Cradle-type motors cannot be used.

Dayton®

Standard-Duty Industrial Fan Heads

- Totally enclosed motors
- Ball bearings
- OSHA-compliant wire guards

Provide cooling in heavy manufacturing areas and other dusty or dirty environments. Fan heads tilt and lock to direct airflow. 115VAC units feature a pull chain switch and 10-ft. 3-cond. power cord; others are hardwired. 208VAC and 277VAC fans reduce amp draw and can be wired with industrial lighting systems.

High-Temperature Industrial Fan Heads

Dayton®

- Non-oscillating
- Ball bearings
- Hardwired
- Max. ambient temp.: 140°F
- OSHA-compliant wire guards

4VAC3

Provide a reliable source of cooling in high ambient temperatures that could burn out fan heads rated for standard temperatures. Fan heads include conduit box and mounting bolts.

Corrosion-Resistant Industrial Fan Heads

Multifan

- Non-oscillating
- Sealed ball bearings
- Variable speed controllable
- Hardwired
- OSHA-compliant wire guards

Withstand exposure to water and moisture to allow operation in wet or humid areas without damage to the fan. Indoor uses include regulating temperature in greenhouses to optimize plant growth and ventilating livestock buildings to prevent heat stress in animals and reduce the buildup of moisture, manure gases, pathogens, and dust. Outdoor uses include cooling people in pool areas and other high-moisture locations. Optional controls and steel mounting brackets sold separately.

High-Velocity Industrial Fan Heads

PATTERSON THE AUTHORITY IN AIR MOVEMENT

- Non-oscillating
- Ball bearings
- OSHA-compliant wire guards

High-rpm motor and tubular housing push air at higher speeds over longer distances than fan heads with a standard open-grill design. 1-phase fans have 12-ft. power cord; 3-phase fans are hardwired.

Mounting Yokes and Brackets—For ceiling-mount only, yoke is required without additional mounting bracket. For floor, wall, or dock mounting positions, additional mounting bracket is needed along with yoke. Assembly hardware included. Brackets sold separately on Grainger.com®.

Light-Duty Industrial Wall-Mount Fans

- Ball bearings
- Unassembled
- OSHA-compliant wire guards

Fans cool light manufacturing areas, warehouses, and other dry, clean spaces where floor space is limited.

Airmaster—2HYH1 through 2HYH3 feature pull chain speed switch and yoke mount which attaches to any surface with 1 bolt or lag screw. Other models include mounting bracket and safety cable kit.

Dayton—Fan heads feature locking tilt adjustment for directional air flow. Bracket and secondary safety support cable included.

Dayton Quiet-Design—Provide high-velocity air flow in settings such as schools, libraries, churches, offices, or other quiet environments. Bracket and secondary safety support cable included.

Standard-Duty Industrial Wall-Mount Fans

Fans cool heavy manufacturing areas and other dusty or dirty environments with limited floor space.

Schaefer—Designed for agriculture, horticulture or industrial applications. Wall-mount units include mounting bracket.

- Ball bearings
- Zinc plated wire guards

Big Ass Fans—55FF65 and 55FF67 have 360° rotation and 40° tilt. 744H99 features an EC motor and 360° rotation. 326VG8 has an IP65 EC motor and an occupancy sensor. For cleaner, healthier air, find fans with Ion Kits on Grainger.com.

- OSHA-compliant guards, except 55FF68

Dayton—Fan heads feature locking tilt adjustment for directional air flow. 115VAC models include 3-cond. power cord; others are hardwired. Bracket and secondary safety support cable included.

- Ball bearings
- OSHA-compliant wire guards

Dayton Quiet-Design—Designed to provide high-velocity air flow in settings such as schools, libraries, churches, offices, or other quiet environments. Bracket and secondary safety support cable included.

Airmaster Fan—Fans include a mounting bracket and secondary safety support cable kit.

- OSHA-compliant wire guards

Industrial Wall-Mount Washdown Fans

Dayton

- Non-oscillating
- Ball bearings
- Hardwired
- OSHA-compliant wire guards

Can be hosed off or pressure washed during cleaning in areas that require regular washdowns. Fan heads tilt and lock to direct airflow. Secondary safety support cable included.

Painted Steel—Primer and white paint finish on motor. Conduit box included.

Stainless Steel—Approved by the USDA and NSF for food zones. Motors comply with BISSC Standard for waterproof motors.

Hazardous-Location Industrial Wall-Mount Fans

Dayton

- Non-oscillating
- Motors only are UL Listed (E29183) for Class 1, Div. 1, Group D, and Class II, Div. I, Groups E, F, and G hazardous locations
- Ball bearings
- Hardwired
- OSHA-compliant wire guards

Resist sparking to reduce the risk of ignition when cooling areas with flammable or explosive vapors, gases, or dust. Designated for use in specific hazardous atmospheres as defined under Article 500 of the National Electrical Code (NEC). Multi-position wall bracket and secondary safety support cable included. UL Listed conduit box supplied for hardwiring.

WARNING: Fan not appropriate for use where paint residue can accumulate on motor or blade.

Corrosion-Resistant Industrial Wall-Mount Fans

Dayton

- Non-oscillating

Withstand exposure to moisture to allow operation in wet or humid areas without damage to the fan. Indoor uses include regulating temperature in greenhouses to optimize plant growth and ventilating livestock buildings to prevent heat stress in animals and reduce the buildup of moisture, manure gases, pathogens, and dust. Also used as outdoor fans for cooling people in pool areas and other high-moisture locations.

1ZCN7 and 1ZCN8 feature OSHA-compliant wire guards.

49YW49 to 49YW51 feature wide-spaced wire guards to help prevent clogging.

Light-Duty Industrial Mobile Floor Fans

- Ball bearings
- OSHA-compliant wire guards

Fans cool light manufacturing areas, warehouses, and other dry, clean spaces.

Light Duty—Move high volumes of directed airflow at low velocity.

Light-Duty Quiet-Design—Provide high-velocity air flow in quiet settings. Fan head tilts to direct air flow.

Portable Tilt Carriage Kits—Kits provide support for the fan head while allowing it to be angled for directing airflow. They can be rolled between locations using the wheels or casters originally supplied with the fan.

Ceiling Mount Kit—Allows fan heads to attach to a wall, ceiling, or post for circulating air right where it's needed.

Dayton · BIG ASS FANS · SCHAEFER · airmaster Fans

Standard-Duty Industrial Mobile Floor Fans

- OSHA-compliant wire guards

Fans cool heavy manufacturing areas and other dusty or dirty environments.

DAYTON

- Ball bearings

Fans move high volumes of directed air flow and tilt 360°. 31XL41 and 31XL42 have maintenance-free brushless DC EC (electrically commutated) motors; others have PSC. All fans include cord wrap, handle, and 7" rubber wheels.

BIG ASS FANS

55FF66—has 360° rotation and 40° tilt. Features ball bearings and a rolling pedestal mount for mobility. For use in unconditioned spaces, areas with low ceilings and obstructions, long, narrow aisles or rooms, and harsh environments.

699W08—has a quiet, energy-efficient direct-drive motor and double-sealed ball bearings. Fits through standard inside doors, has handles on both sides, and indoor/outdoor rubber wheels.

SCHAEFER

- Maintenance-free PSC motor
- Sealed ball bearings

Drum-style fan has stacking tabs and cart with rubberized wheels and a grounded cord.

AIRMASTER FAN

- Sealed ball bearings

Maintenance-free EC (electrically commutated) IP56 motor. Includes a handle and cord wrap on each side, 8" rubber wheels, and locking casters.

Dayton · BIG ASS FANS

Outdoor High-Visibility Industrial Mobile Floor Fans

- Sealed ball bearings
- OSHA-compliant wire guards

Water-resistant fans have a safety-yellow finish that attracts attention to help prevent accidental damage to the fan. Commonly used for cooling high-traffic areas where forklifts and other vehicles are used as well as low-light areas where fans may be difficult to see.

Dayton—Fans move air in outdoor environments, such as construction sites, athletic fields, and open-air loading docks. Water-resistant motors have automatic thermal overload protection. Equipped with tubular steel frame, 8" dia. rubber wheels, and sturdy tilting wheel kit for directing air flow. Units feature 4" base feet, built-in cord wrap, and handle. Foot and wheel assembly is required.

Big Ass Fans—Quiet, energy-efficient, high volume/low speed (HVLS) fan. Typically used for event spaces and work areas. Features 360° head rotation with 16 selectable cage positions. Washdown design for easier cleaning.

PATTERSON THE AUTHORITY IN AIR MOVEMENT

High-Velocity Industrial Mobile Floor Fans

- Ball bearings
- OSHA-compliant wire guards

High-rpm motor and a tubular housing push air at higher speeds over longer distances than fans with a standard open-housing design. Provide more coverage than a typical industrial fan for cooling long aisles and large areas in warehouses and manufacturing plants. 115VAC models include factory-wired 12-ft. cord with plug. 3-phase models require hardwiring.

1-Speed Fans—Fans include a mobile tilting pedestal with wheels (except 7J736 has a pedestal base).

3-Speed Fans—Used for people and process cooling and general air circulation. Units have 6" casters and easy-to-grip handle.

POWER BREEZER™

Portable Misting Coolers

- 85-gal. water capacity
- Oscillating head
- Integrated water tank

Circulate atomized water vapor that mixes with surrounding air to cool and humidify it. Coolers help regulate temperatures to protect workers from heat stress and reduce the risk of damage to machinery and products. They require no filters, no connection to ductwork, and have a large tank that supplies water for spot-cooling indoor production lines and warehouses or outdoor sporting events and festivals. Locking casters ease maneuverability from room to room. Optional ducting 55MU73 helps direct cooling mist to specific areas where it's needed.

Industrial Ceiling Fans

- 120VAC
- Plastic blades
- 18" downrod

Fans combine a traditional ceiling fan appearance and an industrial-duty build for circulating air in manufacturing plants and large commercial settings. Made of heavier-gauge materials than decorative office or residential ceiling fans. A mounting bracket is included for attaching to a ceiling. 488V20 includes a 3-speed wall control. Optional adjustable fan controls sold separately, this page.

Additional ceiling fans available on Grainger.com.

Industrial HVLS (High-Volume Low-Speed) Ceiling Fans

- Variable speed
- Reversible
- Aluminum airfoil blades
- Wall-mounted keypad
- Fire control panel integration

Feature long, specialized blades that move large volumes of air while rotating at a low speed. Operate with minimal noise to avoid creating disruptions and generate gentle airflow, making them ideal for cooling athletic facilities, retail spaces, garages, and factories. Sealed industrial-grade motor and gearbox to withstand harsh conditions. Controller has onboard NEMA 4X VFD to eliminate RFI/EMI noise. Include a mounting bracket. Additional models available on Grainger.com.

Adjustable Fan Controls

- 120V

Use with Dayton and other compatible speed-controllable commercial and industrial ceiling fans. Controls fit single gang box.

Note: When any solid-state motor speed control is used, a humming noise may be present in fan on low speed. This hum in no way affects fan operation and is acceptable in most industrial installations.

Guard- and Tubular-Mount Transformer Cooling Fans

- Totally enclosed motors
- Permanently lubricated sealed ball bearings
- OSHA-compliant wire guards

These fans blow air onto a transformer radiator to help regulate the temperature of an oil-cooled transformer. They help prevent overheating and reduce wear of transformers by circulating air around the radiator housing to speed cooling of oil within the radiator. Motor shaft with rust inhibitor treatment and shaft-end bearing slinger protect against dirt and moisture. Cast-aluminum propellers. Fans include weatherproof 15-ft. UL-Recognized power cord, factory prewired for 230V operation.

Guard-Mount—Have loops that connect to a separate guard-mount mounting kit for attaching to a transformer. Hot-dipped heavy galvanized steel guards. 2ATY1 mounting kit sold separately.

Tubular-Mount—Have a frame that mounts directly to a transformer. Zinc-plated wire guards. Mounting kit included.

Vehicle Bolt-On DC Cooling Fans

- Hardwired
- Adjustable-position swivel
- Base-mounted control switch

Provide cooling for operators of trucks, forklifts, cranes, tractors, and other vehicles. Their base mounts directly to a dashboard or other surface inside a vehicle to aim airflow toward operators for personal cooling. These cooling fans can be used where there's access to a compatible DC power supply. Mounting hardware and gasket included.

Vehicle DC Cooling Fans

- Vertical mount
- Totally enclosed motors
- Sleeve bearings
- Max. ambient temp.: 200°F
- 12VDC

Champion Series low-profile electric engine-cooling fans provide higher performance than belt- or clutch-driven fans. Reduce drag for improved fuel economy and horsepower. Provide max. heat transfer during low speeds and engine idle. Sealed fan motors are dust- and waterproof. Fans feature quiet, reversible S-blade design and all glass-filled nylon construction. Each has four 90° mounting feet, 8 rubber spacers, and 9" mating locking pigtail connector. 12", 14", and 16" fans have concentric retainer rings to keep blades from flattening out at high speed, maximizing air flow.

Oblong, Skeleton, and Square Compact Axial Fans

Used in dry locations to cool equipment within an enclosure. Fans require minimal space for installation and are typically installed where there's full access for mounting them against the interior of an enclosure.

Oblong—Feature an oblong housing that fits into a matching cutout.

Skeleton—Have mounting arms instead of a full housing so they require minimal space for installation.

Square—Fans have a square housing that can mount over a round cutout or fit into a square cutout.

Standard Square Axial Fan Kits—The square housing can mount over a round cutout or fit into a square cutout. Include an air filter, composite air plenum, finger guard, and grille.

Thermostat

RITTAL

This device senses temperatures within an enclosure and automatically turns compact axial fans on and off based on temperature setpoints. Thermostat has a sensor that monitors temperatures and a dial for adjusting the temperature when fans turn on and off. Model connects to a fan and mounts vertically or horizontally within an enclosure on a support rail or mounting plate.

Standard Round Compact Axial Fans

- All-position mounting, except where indicated in table
- Ball bearings

These compact axial fans have a round-shaped housing that fits a circular cutout for cooling equipment within an enclosure. They are for use in dry locations, require minimal space for installation, and are typically used to replace round fans in existing installations. Fans come with mounting holes along the rim of their housing for securing them in place.

Wet-Location Compact Axial Fans

- Ball bearings

These fans are used for cooling equipment in enclosures that are exposed to wet conditions. They have an IP (Ingress Protection) rated motor to withstand water sprays and help keep out dust. Fans require minimal space for installation and have a square housing that can mount over a round cutout or fit into a square cutout. Models are typically installed where there's full access for mounting them against the interior of an enclosure and have mounting holes at each corner for securing them to a wall or panel.

Compact Axial Fan Guards and Filters

Dayton ebmpapst RITTAL

These fan attachments are sized to fit compact axial fans and are used to block out debris to reduce the risk of damage to fans and enclosure components.

Axial Fan Guards—These grilles or grates provide a protective barrier for the blades. They deflect debris and keep objects from being inserted into the blades.

Axial Fan Guards With Filters—They combine a protective barrier for fan blades and a filtering media for cleaning air as it's pulled into a fan. They prevent dust and debris from building up on the fan blades and entering the enclosure.

Square EMF Compact Axial Fan Guard—Mounts to a fan housing to protect the fan blades, filter out contaminants, and shield against electromagnetic and radio frequency interference. Provides EMI-RFI shielding and is often used on enclosures that contain sensitive electronic components.

Axial Fan Replacement Filters—These sheets of filtering media remove debris and contaminants from the air as it's pulled into a fan. They prevent dust and debris from building up on the fan blades and entering the enclosure.

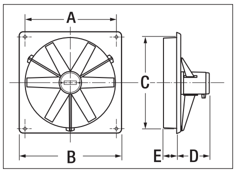
Corrosion-Resistant Direct-Drive Panel Exhaust Fans

Multifan

21A077



- Totally enclosed motors
- Sealed ball bearings
- Speed controllable (except 21A080); 1-phase fans accept Controller 1DGZ5, sold separately on Grainger.com
- Horizontal or vertical mount
- Polypropylene propellers
- Corrosion-resistant fiberglass venturi frames
- OSHA-compliant intake guards

Have fewer moving parts and typically require less maintenance than belt-drive panel exhaust fans. Engineered for continuous operation in highly corrosive environments, outdoors, and in wet applications. Noncombustible motor cap and sound-absorbing, antivibration cast-aluminum supports.

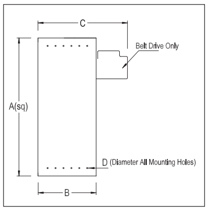
Box Exhaust Fans

Dayton

44YU10



- Totally enclosed motors with sealed ball bearings
- Heavy-gauge galvanized frame withstands corrosive farm duty applications

Have galvanized steel venturi panels and blades, and 1" x 2" galvanized mesh intake and discharge guards. For humid, corrosive, nonexplosive, and nonhazardous environments such as livestock and poultry houses. Fans are typically installed in framed wall openings and do not connect to ductwork.

Note: OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel.

DIRECT-DRIVE

Shipped fully assembled.

BELT-DRIVE

7DZ45 and 7DZ46 include motor, pulley, belt and motor plate; assembly required. 44YU10 and 44YU20 shipped without motor, but include drive sheaves, belt and motor plate; assembly required. Recommended motors: for 44YU10 use 4WNZ5; for 44YU20 use 3RCW9; both sold separately on Grainger.com. Optional belt tensioner 45KF12 sold separately on Grainger.com.

Slant-Wall, Cone and Cylinder Exhaust Fans

Schaefer
Dayton
Canarm HVAC

- Motor: totally enclosed air over, except 45PE31 is totally enclosed fan cooled

These fans pull stale air, heat, odors, and some moisture out of indoor spaces to help improve indoor air quality. Shutters on the intake side minimize turbulence as air moves through the fan, while the shutters close when the fans turn off to block out drafts. Discharge guards help prevent objects from entering the fan on the discharge side. Suitable for ventilating industrial and agricultural facilities.

Note: OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel.

Standard, Quick-Install, and High Efficiency Shutter-Mount Exhaust Fans

Dayton · Canarm HVAC · airmaster Fans

- Motors: 60 Hz; thermally protected, except 33TH66, 788N39, 788N60, and 788N63
- Max. ambient temp.: 104°F, except 788N60 is 158°F
- OSHA-compliant wire guards

These fans have built-in shutters that close when the fans turn off to block out drafts and help maintain the efficiency of the building's HVAC equipment. Shutters open when the fans turn on to pull stale air, heat, odors, and some moisture out of barns, garages, and other enclosed indoor work areas. Fans mount to an exterior wall and are suitable for buildings where fans cannot be mounted to the ceiling. Fully assembled with shutters and prepunched mounting holes; simply frame an opening and mount.

Corrosion-Resistant Shutter-Mount Exhaust Fans

Dayton

- Mount: vertical only
- Motors: totally enclosed, 115V, 60 Hz, thermally protected
- Max. ambient temp.: 104°F
- Fiberglass-reinforced polypropylene blades
- OSHA-compliant epoxy-coated wire guards

Feature blades and housing that will not rust or corrode when exposed to water and moisture, making fans suitable for use in humid and wet environments. Fans have built-in shutters that close when the fans turn off to block out drafts and help maintain the efficiency of the building's HVAC equipment. Shutters open when the fans turn on to pull stale air, heat, odors, and some moisture out of barns, garages, and other enclosed indoor work areas. Fans are direct-drive with few moving parts and typically require minimal maintenance compared to belt-drive models.

Note: Not designed for laboratory hood exhaust or explosive atmospheres.

Hazardous Location Shutter-Mount Exhaust Fans

Canarm HVAC

- Mount: vertical only
- Max. ambient temp.: 104°F
- Motor HP: ⅓
- Single phase
- Single speed
- 3 Aluminum Blades
- OSHA-compliant wire guards

Have an explosion-proof motor and are rated for use in areas where combustible dust or certain flammable gases or vapors are present. Fans have built-in shutters that close when the fans turn off to block out drafts and help maintain the efficiency of the building's HVAC equipment. Shutters open when the fans turn on to pull stale air, heat, odors, and some moisture out of barns, garages, and other enclosed indoor work areas. They are direct drive with few moving parts and typically require minimal maintenance compared to belt-drive models.

Dayton

Standard Direct-Drive Panel Exhaust Fans

- Mount: vertical With Intake Guards; vertical or horizontal Without Intake Guards
- Motors: totally enclosed air over, with Class B insulation
- Ball bearings, except sleeve bearings on 10D954 to 10D956
- Max. ambient temp.: 104°F
- Aluminum blades

Fans have a motor that's directly mounted on the fan shaft, which reduces friction and improves efficiency compared to belt-drive models. They pull stale air, heat, odors, and some moisture out of indoor spaces to reduce airborne contaminants, improve indoor air quality, and allow occupants to breathe comfortably. Galvanized frame and finish.

Note: OSHA-complying guards (included with select models) are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

On Grainger.com, search by Grainger Item Number and look for Optional Accessories or Related Products. Automatic shutters recommended.

Frames for Wall-Mount Ventilation Fans

Dayton

- Mount: vertical or horizontal

Rigid galvanized steel frames have deep venturi and 1"W flanges. 10F477 to 10F479 include a zinc-plated guard; all others have slotted motor base and mounting bolts to accept 48 or 56 frame motors.

Note: Motors and blades are sold separately. For motors, see Index under Motors, Fan; for fan blades, see Fan Blades; for intake guards, see Guards, Fan.

Hazardous Location Direct-Drive Exhaust Fans

Dayton

- Mount: vertical or horizontal
- Motors: explosionproof, fan-cooled enclosure with Class B insulation
- Hazardous location ball bearings
- Max. ambient temp.: 104°F

Fans ventilate spaces containing flammable or explosive vapors, gases, or dusts (per NEC 500). For use with NEC Class I, Division I, Groups C and D; NEC Class II, Division I, Groups F and G (10E020 for Groups E, F, and G). Galvanized frame and finish. Spark-resistant aluminum blades. Motorized damper and shutters are not recommended.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Not for use with hazardous location exhaust applications. Review OSHA codes and UL standards.

Consult local ventilation contractor or fire inspector for local code requirements. Do not use where motor or blades will accumulate paint residue. Electrically ground all components in hazardous location system.

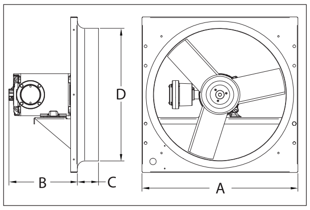
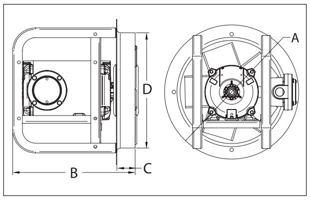
** Performance certified is for installation type A: free inlet, free outlet. Performance ratings do not include the effects of appurtenances (accessories). Speed (rpm) shown is nominal. Performance is based on actual speed of test. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m), in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.*



Panel Exhaust Fan



Ring Exhaust Fan

Direct-Drive Reversible Panel Fans

Dayton

- Mount: vertical or horizontal
- Motors: totally enclosed air over, with Class B insulation
- Ball bearings
- 1 speed, 60 Hz
- Max. inlet/ambient temp.: 104°F

Versatile fans have reversing switch to quickly exhaust or supply air in demanding ventilating applications. Feature galvanized frame.

Note: OSHA-complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards.

Belt-Drive Supply Fans

Dayton

- Mount: supply—vertical, exhaust—horizontal
- Regreasable pillow block ball bearings, except 60" blade dia. fans are regreasable cast pillow block; 3FKD4, 7CC26, and 7AC80 to 7AD15 have sealed pillow block
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance

Designed for commercial applications requiring high volumes of air at low static pressures. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motors, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered. More sizes available on Grainger.com.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards.

Standard-Duty— Feature 6-blade galvanized-steel propellers and rigid drive-frame rails.

Heavy-Duty— Feature 6-blade heavy-duty cast aluminum propellers and heavy-duty drive-frame channels.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values are for installation Type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed.*

1AHA8

Heavy-Duty Belt-Drive Exhaust Fans

- Mount: exhaust—vertical, supply—horizontal
- Regreasable, cast pillow block ball bearings
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance (except 1AHB5)

Designed for commercial and industrial applications requiring high volumes of air at low to medium static pressures. Fans feature 6-blade heavy-duty cast-aluminum propellers, heavy-duty drive-frame channels, bearing plate, and motor plate. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motor, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

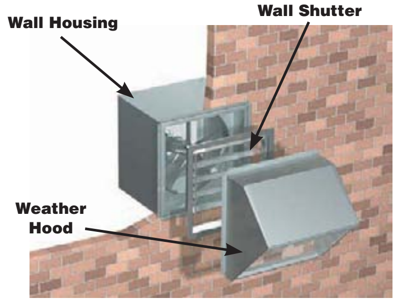
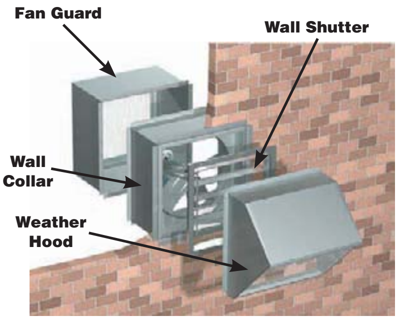
** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed.*





Exhaust and Supply Fan Accessories

Galvanized steel accessories are for use with Dayton belt- and direct-drive exhaust and supply propeller fans. Shipped unassembled; assembly hardware included.

Wall Housings—OSHA-compliant screen completely protects motor drive side of fan.

Weather Hoods—Each includes bird screen.

Wall Collars—Internal flange for mounting shutters; external flange provides flashing for wall opening.

Fan Guards—OSHA-compliant screen completely encloses motor drive side of fan.

Note: OSHA-compliant guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards.

AMCA CERTIFIED RATINGS — SOUND AND AIR PERFORMANCE

Belt-Drive Wall-Mount Cabinet Exhaust and Supply Fans

- Fully assembled fan packages for through-the-wall installation
- Motors: open dripproof
- Regreasable cast pillow block ball bearings
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance

Belt-drive fans are designed for commercial/industrial applications that require delivery of high volumes of air at low static pressures. Air handling-quality bearings meet a minimum of L10-100,000 hours. Features include galvanized steel fan panel, fabricated steel propeller, and bolted cabinets. Exhaust damper blade is top-pivoting gravity return; supply damper blade is bottom-pivoting spring return. Wall-mounting angles included.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings include the effects of bird screen and damper in the air stream. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.*

Dayton®

Reversible Belt-Drive Exhaust/Supply Fans

- Mount: vertical
- Regreasable cast pillow block bearings
- Max. inlet/ambient temp.: 104°F
- Variable-pitch, adjustable motor pulley optimizes fan performance

Designed for commercial and industrial applications requiring both supply and exhaust air. Fans feature 6-blade cast-aluminum propellers and rigid drive-frame rails. Motor, sheaves, bushings, belts, and reversing switch are packed separately when complete fan with drive package is ordered. Air handling-quality bearings meet a min, of L10-100,000 hr.

Note: OSHA-complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards.

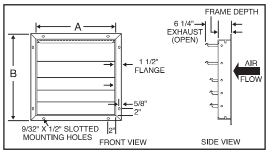
** Performance is for exhaust fan installation type A: free inlet, free outlet. Supply fan performance is approx. 20% less for each horsepower (HP). † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field. Values are for installation type A: free inlet sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed.*

Single- and Double-Panel Exhaust Shutters

Dayton



1C742

3HHN6

2FTW1

- Exhaust only
- Mount: vertical
- Max. velocity: 2500 fpm
- 1½" flange

Efficient shutters for direct- or belt-driven exhaust fans are designed to prevent air backflow when the fan is off. Counterbalanced louvers with felted edges (except fiberglass models) open easily and seal quietly. Units with 54" and 60" galvanized and aluminum shutters have 4 additional tie rods on the discharge side for smooth, quiet operation.

G-90 Galvanized Steel Frame—For general purpose applications. 26-ga. mill-finish aluminum louvers with galvanized steel reinforcement strip. Stainless steel rivets. Frame depth: 2½" for 10" to 24" models, 3" for models 30" and up.

Extruded Aluminum Frame—For areas where corrosion may be a problem. Aluminum louvers have white enamel finish, galvanized steel reinforcement strip, and stainless steel rivets.

Fiberglass Frame—For use in areas where corrosion is a known problem, such as chemical plants and poultry/swine confinement operations. Heavy-duty fiberglass frame with stainless steel pins and bearings at pivot points. 3"-deep frame and 14-ga. tie rod, except 10" and 12" models have 16-ga. tie rod. Optional Shutter Motors 45C683, 45C664, and 45C665 can be used without additional motor setup; sold separately on this page.

Front-Flange, Extruded Aluminum Frame—For cabinet fans and flush-mount wall exhaust applications. Frame has G-90 galvanized steel tie rods and stainless steel rivets and pivot pins. Mill-finish aluminum louvers with galvanized steel reinforcement strip open easily and minimize load on the fan.

Stainless Steel Frame—For applications that require extreme corrosion resistance. Frame, louvers, tie rods, and all fasteners are stainless steel. Frame depth: 2". Shutter motors not available.

Optional Shutter Motors For Single-Panel Shutters—For exhaust installations on single-panel shutters only; vertical mount only. 6¾"H x 4"W x 4¾"D (installed depth from frame back). Actuator includes end switch. 100-240V, 2.0/1.3A, 50/60 Hz.

Optional Shutter Motors For Double-Panel Shutters—For exhaust installations on double-panel shutters only; vertical mount only. Dimensions include installed depth from frame back:

24N065: 6½"H x 4"W x 6¼"D. 100-240V, 2.0/1.3A, 50/60 Hz. Actuator includes end switch.

4C885: 9¾"H x 5⅞"W x 7¼"D. 100-240V, 0.25/0.20A, 60 Hz. Includes 6" leads with junction box.

Optional Pull Chain Kits—Adapt single- or double-panel exhaust shutters for manual operation. Each includes zinc-plated S-hooks, return springs, and 4-ft. pull chain.

High Velocity Single- and Double-Panel Exhaust Shutters

Dayton

4FZH4

- Exhaust only
- Mount: vertical
- Max. velocity: 3000 fpm
- 1½" flange

Designed to prevent air backflow in high-velocity applications when the fan is off. Mill-finish extruded aluminum frame and louvers with stainless steel tie rods and fasteners provide strength, durability, and long-lasting corrosion resistance. Prepunched mounting holes; installation hardware not included.

Optional Pull Chain Kits—Adapt single- or double-panel exhaust shutters for manual operation. Each includes zinc-plated S-hooks, return springs, and 4-ft. pull chain.

Agricultural Wall Exhaust Shutters

- Max. velocity: 2500 fpm

For direct- or belt-drive exhaust fans. Excellent for poultry and swine confinement operations and anywhere corrosion is a problem.

G-90 Galvanized Steel Frame and Tie Rods— Designed as replacement shutters for cone and slant-wall fans. Felted louvers with galvanized steel reinforcement strip open easily and seal quietly. G-90 galvanized tie rods and stainless steel hardware. 9⁄32" x ½" prepunched mounting holes.

Extruded Aluminum Frame and Tie Rods— Constructed of extruded aluminum frames with roll-formed louvers and counterbalancing strips. Stainless steel fasteners provide excellent corrosion resistance in agricultural applications. Prepunched mounting holes.

Dayton®

Door Louvers

Rugged metal construction is designed to allow air movement through doors while maintaining privacy and security. Retrofit or use as original equipment in 1⅜"- to 2¼"-thick wood or metal doors. Blades are inverted V-style, 45° angle. Choose clear-finish aluminum or gray-painted steel. Each includes installation screws.

Backdraft Dampers

Dayton

For belt-drive centrifugal roof and wall ventilators. Max. velocity: 2000 fpm for models up to 19" and no-flange, 2250 fpm for 23" and larger.

WARNING: Not for use with kitchen exhaust applications.

ROOF-MOUNT

G-90 galvanized steel frame, 2" deep with 1" flange. Aluminum louvers, stainless steel pivot pins, nylon bushings, and felted edge. Prepunched conduit hole knockout.

WALL-MOUNT

16-ga. mill-finish extruded aluminum frame, 1½" deep with 1⅜" flange. Mill-finish aluminum louvers have galvanized steel reinforcement strip. Spring close for positive seal.

NO FLANGE, HORIZONTAL/ VERTICAL MOUNT

For use in roof curbs, ductwork, and wall collars when using a fan or power roof ventilator. G-90 galvanized frame is 2" deep. Mill-finish aluminum louvers. Stainless steel pivot pins and rivets, and nylon bushings. Prepunched conduit knockout.

Note: Models over 30" are horizontal-mount only.

OPTIONAL SHUTTER MOTORS

Motor packs expand options where standard 120/240 line voltage is not available. 60 Hz, 1-phase motors simplify installation by eliminating the need for transformers or other adaptations. Not for use with 8" roof curbs.

Belt-Drive Tubeaxial Fans

Dayton

- Mount: vertical or horizontal
- Permanently lubricated ball bearings
- Max. inlet air temp.: 200°F
- Max. ambient: 104°F
- Precision-balanced, spark-resistant aluminum blades
- Belt guards
- AMCA Type B spark-resistant propellers (99-0401-86)
- Optional companion flanges are sold in pairs

Streamlined belt tunnel ventilates the drive compartment with air from outside the fan. Steel housing is iron phosphate-processed for rust protection; baked enamel paint finish. Factory installed cast-iron sheave is assembled on fan shaft. Motors and belts are packed separately when complete fan with drive package is ordered.

Note: These fans cannot be used if the environment surrounding them is not always free of flammable gases, vapors, or liquids; combustible dust; or ignitable fibers or flyings. Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and the National Fire Protection Act (NFPA).

OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel. Review OSHA Codes and UL Standards.

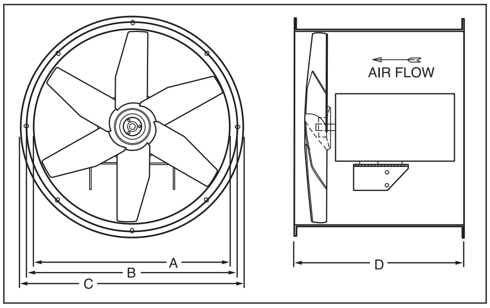
** Performance shown is for installation Type B: free inlet, ducted outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation Type B: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. †† 115V only. ‡ 230V only. ## 208/230V only.*

Direct-Drive Tubeaxial Fans



4TM82

- Totally enclosed ball bearing motors
- Max. inlet/ambient air temp.: 104°F
- Precision-balanced aluminum propellers
- 1DGZ9 2-speed control is required for 2-speed models (except 4TM84); see Grainger.com

Designed to efficiently move air in medium-length ductwork. Motor, blades, and housing are shipped assembled and operate in any position. Steel housing is coated with baked enamel finish. 115V, except 4TM84 is 230V, and 4TM85 and 2XZH2 are 200-230/460V, 3-phase. Tubeaxial fan discharge caps and curb caps sold separately on Grainger.com.

WARNING: Not for hazardous location applications.

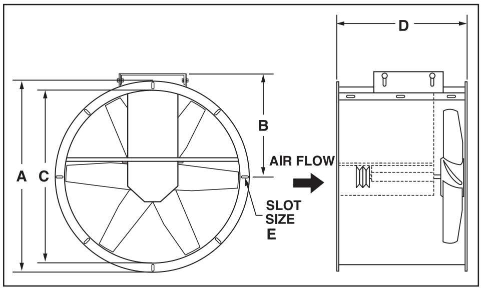
** Performance shown is for installation Type A: free inlet, free outlet. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 feet (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation Type A: free inlet hemispherical sone levels.*

Belt-Drive Stainless Steel Tubeaxial Fans

4GXU5

- Mount: vertical or horizontal
- Permanently lubricated ball bearings
- Max. inlet air temp.: 200°F
- Max. ambient air temp.: 104°F
- Precision-balanced, corrosion-resistant stainless steel blades
- Belt guards
- Optional companion flanges are sold in pairs

Designed for food processing applications. Streamlined belt tunnel ventilates the drive compartment with air from outside the fan. Factory installed cast-iron sheave is assembled on fan shaft. Motors and belts are packed separately when complete fan with drive package is ordered. Tubeaxial fan discharge caps and curb caps sold separately on Grainger.com.



Note: These fans cannot be used if the environment surrounding them is not always free of flammable gases, vapors, or liquids; combustible dust; or ignitable fibers or flyings. Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and the National Fire Protection Act (NFPA).

OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel. Review OSHA Codes and UL Standards.

Ceiling-Mount Ventilation Fans

These fans mount to a ceiling and connect to ductwork to ventilate indoor spaces. They help maintain indoor air quality by pulling in fresh air and exhausting out stale air to reduce airborne contaminants. Fans may also help regulate the indoor air temperature since they circulate the air.

Standard Residential Ceiling Exhaust Fans—Compact axial fans are suitable for ventilating recreation rooms and other residential areas that do not require continuous fan operation.

Standard Commercial Ceiling Exhaust Fans—These centrifugal ceiling exhaust fans provide quiet operation making them suitable for conference rooms and other occupied spaces in buildings that require continuous ventilation.

Commercial Convertible Ceiling Inline Cabinet and Exhaust Fan—Unit is ready to be installed as a ceiling ventilation fan with a right-angle discharge, but can be converted to a cabinet fan with an inline discharge. Fan provides quiet operation making it suitable for conference rooms and other occupied spaces in buildings that require continuous ventilation.

Rectangular Duct Inline Cabinet Fans

Feature a sturdy housing and provide continuous ventilation in office buildings, public restrooms, and similar spaces. Fans connect to ductwork and are powered by a single centrifugal motor. Single-wide models have one blower wheel, while double-wide models have two blower wheels that provide a higher airflow than single-wide models.

Rectangular Duct High-Efficiency Inline Cabinet Fans

Feature electronically commutated motors (ECMs) that are more energy efficient, operate quieter, and have long life compared to other AC motors. Design allows horizontal or vertical mounting, and they connect to ductwork. Fans provide continuous ventilation in office buildings, public restrooms, and similar spaces. Single-wide models have one blower wheel, while double-wide models have two blower wheels that provide a higher airflow than single-wide models.

Residential Range Hoods

Install over stoves and ranges to capture grease, smoke, and odors before they can spread through the kitchen and the surrounding home and settle into carpets, furniture, and other surfaces.

Exhaust Hoods—Models extract grease, smoke, and odors from the cooking area so they can be vented to the outside. They connect to ductwork and have a removable/cleanable grease filter to help maintain the hoods' performance. Hoods accept a compatible bulb for lighting the area underneath the hood.

Recirculation Hoods—Hoods filter grease, smoke, and odors from the air around the cooking area and then recirculate the filtered air into the kitchen. They have a removable/cleanable grease filter and a replaceable charcoal filter that helps ensure cooking odors are neutralized. Hoods accept a compatible bulb for lighting the area underneath the hood. They mount under a cabinet, above a stove or range, but do not connect to ductwork.

Convertible Exhaust and Recirculation Hoods—These hoods can connect to ductwork to extract air from the cooking area and vent it to the outside. Models can be used with optional charcoal filters to filter the air around the cooking area and then recirculate the filtered air where the hoods cannot be connected to ductwork. Replaceable filters ensure the hoods can effectively neutralize cooking odors, while removable/cleanable grease filters help maintain the hoods' performance. Hoods accept a compatible bulb for lighting the area underneath the hood.

Centrifugal In-Line Duct Fans

- Mount: horizontally or vertically
- Bearings: ball

Prewired fans have lower sound levels than comparable surface-mounted fans. Max. temp.: 140°F. Mounting bracket included.

THERMOPLASTIC

External wiring box with waterproof gasket. UV protected.

GALVANIZED STEEL

Externally mounted wiring box, 3"L x 3½"W x 1½"D.

FG Series—Airtight housing. Backward curved impeller.

FKD Series—Mixed flow impeller. 6KVY5 to 6KVZ3 have sealed ball bearings.

RADON FAN

Higher pressure capabilities are designed for radon mitigation. Plastic housing.

Mixed Flow In-Line Duct Fans

S&P

- 120V, 60 Hz
- Mount: horizontally or vertically
- Motor: totally enclosed
- Bearings: ball

Motor-impeller assembly can be removed without interfering with attached ducting.

TD-MIXVENT Series—Low-profile fans deliver excellent airflow-to-pressure ratio. 3CGA3 to 3CGA7 have thermoplastic casings and ABS plastic propellers. 3CGA9 and 3CGC1 have metal casings with epoxy-polyester coating and metal propellers.

TD-SILENT Series— Extremely quiet, low-profile fans have perforated inner skin with sound-absorbent insulation. Rubber gaskets on inlet and outlet absorb vibration. Thermoplastic casings and ABS plastic propellers.

Centrifugal In-Line Duct Fans

- 120V, 60 Hz; except 6XAR3 is 115V
- Mount: horizontally or vertically
- Bearings: ball
- Speed controllable

In-line design allows fan mounting away from room for quiet operation. Motor has automatic reset thermal overload protection.

DAYTON

- Max. Inlet Temp.: 104°F

Precision balanced for vibration-free performance and have a quiet and efficient BC impeller. Heavy-gauge, drawn steel housing with an epoxy finish.

SOLER AND PALAU

- Max. Inlet Temp.: 140°F

Impeller is dynamically balanced to help eliminate vibration. Galvanized steel casing with black, baked enamel coating. Prewired junction box eases installation.

Remote-Mounted Premium Bath Fan Kits

- 120V, 60 Hz
- Motors: totally enclosed, thermally protected with automatic reset
- Bearings: permanently sealed ball

Can be installed away from bathroom for quiet operation. Galvanized steel housing.

Single Grille—Provide 1 vent in 1 bathroom. Each includes 1 centrifugal fan, collar and grille, backdraft damper, and fan mounting bracket.

Dual Grille—Provide 2 vents in 1 bathroom or 1 vent in 2 bathrooms using 1 fan. Each includes centrifugal fan, 2 collar/grille combinations, 2 backdraft dampers, fan mounting bracket(s), and 1 Y-duct adapter to split duct to each grille. 45TU14 has 1 lit and 1 unlit ceiling grille.

Room-to-Room Transfer Fans

- 120V
- Mount: wall
- Bearings: sealed ball
- Speed controllable

These fans are installed through an interior wall between adjacent rooms to move air between the rooms and balance the ambient temperature in the rooms. Durable, galvanized housing is adjustable to fit walls from 3" to 5½" thick. Plastic grille is white, paintable.

In-Line Duct Fan Heaters

Heaters—Install in existing ductwork, providing individual room temp. control. Integrated 24V control board interfaces with supplied 24V heating/cooling thermostat, allowing unit to run independently of main heating equipment and to be used as a backup heating system. Cool by enhancing air flow during central air conditioning operation.

Boots—Easily join heater to ductwork. Flexible, rubberized canvas duct piece reduces noise. 7½"L.

Wireless Thermostat—Kit allows standard low voltage thermostats to wirelessly control an HVAC system.

Ductless Through-the-Wall Exhaust Fans

- Galvanized steel housing
- Optional controls sold separately

Mount to an exterior wall and do not need to be connected to ductwork. Fans are suitable for ventilating a single room or spot ventilating areas near workbenches or equipment that emits fumes. They circulate the air and can help regulate the indoor air temperature. Fans have adjustable housings and paintable grilles.

No Switch on Unit—Models are controlled by a separate switch, timer, or speed control remotely mounted on the wall.

Ducted Through-the-Wall Exhaust Fans

- Motor phase: 1
- Permanently lubricated bearings
- Speed-controllable

Connect to ductwork which ensures that fan-generated noise is kept outside when the fans are mounted to an exterior wall. Suitable for remote ventilation of work areas, offices, bathrooms, utility rooms, and other similar small spaces. **High-Efficiency** models have a high-efficiency motor that decreases the amount of energy required compared to other similarly sized ducted through-the-wall exhaust fans with standard AC motors.

Crawl Space and Basement Ventilation Fans

TJERNLUND

Reduce humidity, mold, mildew, odors, and wood rot in crawl spaces and basements, and help reduce radon concentrations by ventilating these areas. **Crawl Space** fans mount behind existing passive louvers and pull air from louvers on opposite walls. When using multiple fans, install to maximize cross-flow ventilation. Galvanized metal faceplate can be trimmed if necessary. All models include freeze protection thermostat. **Basement** Fan 6KXZ0 installs in cut-out of rim joist or wall. 2 reversible fans provide either air supply, exhaust or balanced air exchange. Includes adjustable dehumidistat, 6-ft. power cord, and all mounting hardware. Use 6KXZ1 Duct Take Off Kit to duct air supply/exhaust to other rooms.

DETERMINE QUANTITY OF CRAWLSPACE FANS NEEDED

Calculate cubic area of crawlspace by multiplying L x W x H. Divide by 15 to determine minimum cfm needed to fully ventilate space in 15 min.

Example: 20W x 40L x 3 ft. H crawlspace = 2400 cu. ft.
2400 cu. ft. ÷ 15 min. = 160 cfm of ventilation.

Dryer Booster Fans

S&P TJERNLUND

Use where dryer duct runs exceed 25 ft. equivalent.

Soler and Palau—Feature totally enclosed motor with Class F insulation and backward inclined wheel to overcome extreme pressure in tough installations. 6XAR4 has attached pressure switch. 6XAR5 has current sensor. Each includes mounting bracket.

Tjernlund—Handles up to 150 equivalent ft. of duct: straight duct length plus 5 ft. per elbow. Auto-syncs with clothes dryer. 6-ft. grounded plug. Horizontal or vertical duct connection. External motor and lintproof blower.

- NEMA 1 junction box
- Max. inlet air temp.: 300°F
- Air handling quality bearings meet min. L10-100,000 hr.
- Bearings—units without drive package: sealed pillow block up to 16½" wheel dia., regreasable pillow block for 18½" wheel dia. and larger
- Bearings—assembled units: sealed pillow block up to 18½" wheel dia., regreasable pillow block for 21¼" wheel dia. and larger
- UL and C-UL 762 Listed Restaurant Exhaust Appliances

Designed for use in restaurants, schools, and commercial and industrial applications to exhaust contaminated air from kitchen range hoods up and away from roof. 1-pc. rolled aluminum windband is fully welded to base for virtually leakproof seal between the ventilator and the mounting surface. Internal steel support braces and a fully rolled windband dramatically increase the rigidity of the ventilator.

Motor, drive frame, and wheel are isolated from the mounting base by independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is isolated from the contaminated air stream and is cooled by outside air that is pulled in through an oversized breather tube by the spinning action of the wheel. Motors, sheaves, and belts are packed separately when unassembled ventilator with drive package is ordered.

Note: NFPA 96 requires the use of a ventilated roof curb, grease trap, clean-out port, and hinge kit in restaurant applications; for NFPA 96 accessories, see page 2962.

WARNING: Do not use a damper in any kitchen installation.

High-Pressure—Specifically designed for applications that have high static pressure.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. ††Nonkitchen dampers are not for use with any kitchen exhaust applications.*

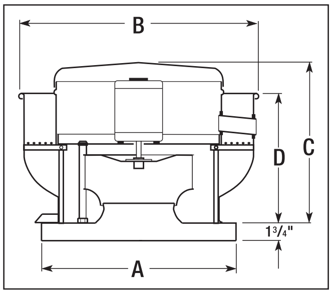
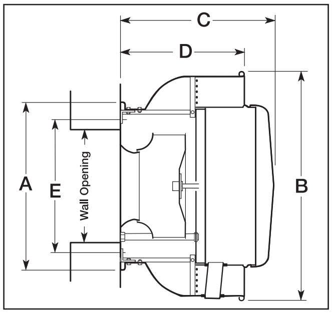
** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. ††Nonkitchen dampers are not for use with any kitchen exhaust applications.*



Roof-Mount



Wall-Mount (Round Mounting Plate Incl.)

Dayton

Centrifugal Direct-Drive Upblast Exhaust Ventilators

- Aluminum, backward-inclined wheel
- Motor, drive frame, and blower wheel isolated from mounting base
- Motor compartment isolated from contaminated air
- NEMA 1 junction box in motor enclosure (Hazardous units have NEMA 7 & 9 disconnect switch)

Note: Additional sizes available on Grainger.com. Speed controllers available for 115V units only; see page 2955. For kitchen application, check with local code authorities for minimum duct velocities. Do not use dampers in any kitchen application. NFPA 96.

EC Motor—Electronically commutated motor can provide up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed controls allow manual fan speed adjustment from remote location; see page 2955.

3-Speed—Speed controllable on any RPM providing 30% useable turndown. UL 705 Listed for Power Ventilators.

1-Speed—UL 762 Listed Restaurant Exhaust Appliances (YZHW), except hazardous units.

** Not for use with any kitchen exhaust applications. ** Performance certified is for installation type A: free inlet, free outlet. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.*

Speed Controls For Direct-Drive Fans & Ventilators

Dayton®

48C172 and 48C173 can operate multiple direct-drive fans if total amp draw does not exceed control's amp rating. 43Y140 includes transformer and hardware. 35YV92 allows fan to operate between 2 speeds with SPDT switch or relay.

Commercial Kitchen Exhaust Hoods

Dayton®

- 430 stainless steel construction
- Hoods are NSF Standard 2 Certified

Grease Hoods—Type I wall canopy hoods are used above grease-producing appliances such as fryers and griddles. Hoods feature integral 3" airspace for clearance to limited combustible materials. Each includes aluminum baffle grease filters, incandescent light fixtures, ½-pt. grease cup, hanger brackets, and exhaust collars. Rated for 600ºF maximum cooking operation temperature. UL and C-UL 710 Listed.

Condensation Hoods—Type II wall canopy hoods are used above moisture-producing appliances, such as dishwashers. Hoods include condensate baffles, gutter, ½" drain connection, hanger brackets, and exhaust collars.

Heat Hoods—Type II wall canopy hoods are used above heat-producing appliances (without grease) such as ovens. Hoods include hanger brackets and exhaust collars.

Air Supply Plenums—Introduce make up air to space near exhaust hood, minimizing the need to heat or cool make up air. Perforated panels evenly distribute airflow.

End Skirts—Mount on the sides of the exhaust hood to improve hood capture performance.

Digital Temp. Interlocks—Required by International Mechanical Code 507.2.1.1 on Type I grease exhaust hoods. Interlock automatically starts the exhaust fan when cooking occurs. Includes one temp. sensor. UL approved quick-seal for hood penetration and temp. controller.

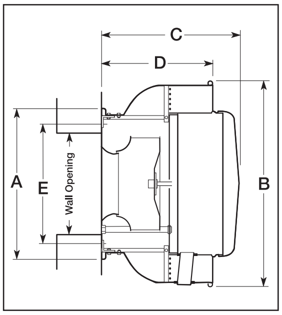
Grease Filters—Collect grease on the interior walls of the filter and then drains into the kitchen hood grease cup. Designed to remove up to 69% of grease particles.

Find more information on Commercial Kitchen Exhaust and Supply Ventilator selection on page 3105.



Centrifugal Belt-Drive Upblast Exhaust Ventilators

- Wall mount applications
- Aluminum, backward-inclined, nonoverloading centrifugal wheel design
- NEMA 1 junction box located in motor enclosure
- Max. inlet air temp.: 300°F
- UL 762 Listed Restaurant Exhaust Appliances

Designed for use in restaurants, schools, commercial, and industrial applications to exhaust contaminated air from kitchen range hoods. 1-pc. rolled aluminum windband fully welded to the base creates a virtually leakproof seal between the ventilator and the mounting surface. Internal steel support braces; round mounting plate included. Motor, drive frame, and blower wheel are isolated from the mounting base by the use of independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is isolated from the contaminated air stream and is cooled by outside air pulled in through an oversized breather tube by the spinning action of the wheel.

Round-to-Square Base Adapters—Designed to adapt a standard round fan base to an existing square installation. Allows an existing installation to be used when replacing a ventilator. Constructed of galvanized steel. Flange surface is 1¾".

Wall-Mount
(Round Mounting Plate Incl.)

Centrifugal Direct-Drive Downblast Exhaust Ventilators

- For general clean air exhaust
- Aluminum backward-inclined, nonoverloading centrifugal wheel design
- Motor compartment isolated from air stream and cooled by outside air
- NEMA 1 junction box
- Max. inlet air temp.: 130°F
- UL-705 Listed for Power Ventilators

EC Motor—Feature electronically commutated (EC) motors for up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed control kits allow manual fan-speed adjustment from a remote location, see page 2955.

3-Speed—Fully controllable on any selected speed. Speed control allows for 30% useable turndown.

1-Speed—Class B insulation and single-speed motors are fully speed controllable at 115V only.

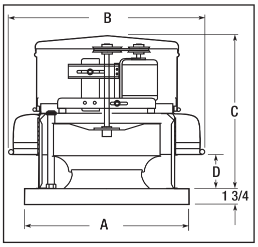
** Performance certified is for installation type A: free inlet, free outlet. Performance ratings include the effects of a bird screen in the airstream. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet fan sone levels. ** 115/230V, speed controllable at 115V only.*

Centrifugal Belt-Drive Downblast Exhaust Ventilators

Dayton



- Aluminum, backward-inclined, nonoverloading centrifugal wheel design
- NEMA 1 junction box located in motor enclosure
- Max. inlet air temp.: 180°F
- UL-705 Listed for Power Ventilators
- Air handling quality bearings meet min. L10-100,000 hr.
- Bearings—units less motor and drive: sealed pillow block up to 16¾" wheel dia., regreasable pillow block for 18½" wheel dia. and larger
- Bearings—assembled units: sealed pillow block up to 18½" wheel dia., regreasable pillow block for 21½" wheel dia. and larger

Designed to meet the general clean air exhaust requirements for industrial and commercial buildings. Rugged and reliable construction makes fan capable of withstanding severe exhaust conditions. Spun aluminum construction features a fully rolled windband bead for increased stability and easy transport. Fresh outside air is drawn in under the motor cover to maximize motor life. Drive frame is internally isolated from the rest of the unit through use of neoprene isolators for long life and quiet operation; no steel-to-steel contact. Motors, sheaves, and belts are packed separately when complete, unassembled ventilator with drive package is ordered.

(1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A, free inlet fan sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. †† 115/230V.*

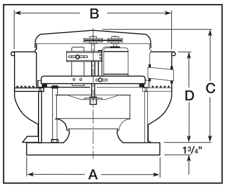
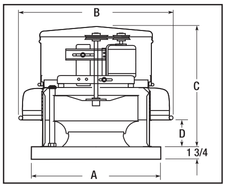
Hazardous Location Centrifugal Belt-Drive Exhaust Ventilators

Upblast



Downblast



- Aluminum, backward inclined, nonoverloading centrifugal wheel design
- Air handling-quality bearings meet min. L10-100,000 hr.

Designed to exhaust air in commercial and industrial applications with potentially hazardous particles or fumes. Constructed with spark-resistant aluminum wheel and rub ring. Spun aluminum housing features rolled wind band to increase stability. Motor, drive frame, and wheel are isolated from the mounting base by independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is cooled by fresh outside air, maximizing motor life. Motors, sheaves, belts, and conduit kit are packed separately when unassembled ventilator with drive package is ordered.

Warning: Nonhazardous location ventilators are not interchangeable with hazardous location ventilators.

Note: Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and National Fire Protection Act (NFPA).

UPBLAST VENTILATORS

- Motor only UL Listed for Class I Groups C & D and Class II Groups E, F & G hazardous locations
- Max. inlet air temp.: 300°F
- Bearings: sealed pillow block up to 16½" wheel dia.; regreasable pillow block for 18½" wheel dia. and larger

DOWNBLAST VENTILATORS

- Motor only UL Listed for Class I Groups C & D and Class II Groups E, F & G hazardous locations
- Max. inlet air temp.: 180°F
- Bearings—sealed pillow block up to 16¾" wheel dia.; regreasable pillow block for 18½" wheel dia. and larger

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, conduit kit, belts, and sheaves to obtain performance listed.*

Axial Direct-Drive Downblast Exhaust and Supply Ventilators

- NEMA 1 junction box in motor enclosure
- Max. inlet air temperature: 120°F
- UL-705 Listed for Power Ventilators
- Units with 10" and 12" propeller diameter are wall- or roof-mountable

Provide steady exhaust or supply of clean air under low-to-moderate static pressures. Spun aluminum construction, with fully rolled bead on the windband, for stability and rigidity when lifting and transporting. Many models are speed-controllable; 4YC52, 4YC54, 4YC60, and 4YC62 are only speed-controllable at 115V.

EC Motor—39FV53 to 39FV56 feature electronically commutated (EC) motors, providing up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed control kits let you adjust fan speed from a remote location; see page 2955.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a bird screen in the airstream. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed.*

Supply Or Make-Up Air Ventilation

The total amount of air supplied is approximately 100% of the air exhausted. Insufficient make-up air in the kitchen can create hood capture problems. There are two general types of make-up air, untempered and tempered. Here are some things to consider when selecting the supply portion of your kitchen ventilation system.

- **A slight negative pressure is desirable in a kitchen to keep odors out of the dining room (should not exceed 0.02" static pressure)**
- **Make-up air must be supplied at ±10°F from air in the space**
- **Use non-directional perforated diffusers (4-way diffusers are not recommended in kitchen applications)**

Untempered filtered supply ventilators are the most economical solution if heating or cooling is required and all codes can be met. Untempered air should be supplied near the hood at low velocities so it can be exhausted quickly without mixing in the space, causing discomfort and increasing heating/cooling costs.

Tempered direct-fired make-up air heaters provide the best comfort in the kitchen. Supply tempered air through a source that will distribute air throughout the kitchen to increase comfort. Northern climates almost always require heated make-up air.

INSTALLATION

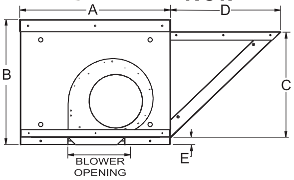
NFPA 96

- **Intake must be a minimum of 10 ft. from exhaust ventilator,**

Or

- **Exhaust ventilator discharge must be a minimum of 36" higher than intake**

4YC47



Centrifugal Belt-Drive Filtered Supply Ventilators

Dayton

- Max. inlet air temp.: 120°F
- UL 705 Listed for Power Ventilators
- Air handling-quality bearings meet min. L10-100,000 hr.
- Bearings: sealed pillow block (20½" units are regreasable pillow block)

Supply untempered, filtered makeup air to commercial and institutional buildings, or in commercial kitchen applications. Heavy-gauge galvanized steel construction. Neoprene isolators, lifting lugs, and weather hood with removable 1" aluminum washable filters. 4YC82 and 4YC47 can be wall- or roof-mounted. 4YC83, 5AU56, and 5AU57 are roof-mount only. Motor, belts, and sheaves are packed separately when complete ventilator with drive package is ordered.

** Performance certified is for installation type B: free inlet, ducted outlet. † Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a filter. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation in Type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed.*

NFPA 96 Required Accessories

Dayton

4HX61

Ventilated Roof Curbs—Ventilate hot exhaust ducts in commercial kitchen applications, protecting buildings and roof members. Galvanized steel curbs allow for quick ventilator installation and uniformity throughout the job. Fixed curbs are 18 ga.; adjustable curbs are 16 ga. Flat-flashing flange mounts directly to roof surface. Top flange surface is 1¾" wide. For use with NFPA 96, UL 705, and UL 762 applications.

Grease Collector Box—Diverts and collects heavy grease residue while protecting roof surface. Fastens directly to curb underneath ventilator and includes connection from ventilator drain to Grease Box. Required for NFPA 96 and UL 762.

Hinge Kits—Allow ventilators to swing back to expose the entire fan for cleaning and inspection, making maintenance easier. Includes retaining cable and hardware kit. Upblast Hinge Kits are required for NFPA 96 and UL 762.

Clean-Out Port Kit—Retrofits ventilator with a cleanout port for access to the ventilator wheel through the windband. Required for NFPA 96. Includes removable plug and hardware. Required for NFPA 96 and UL 762.

Nonventilated Roof Curbs

- For insulated and noninsulated metal, concrete, or wood roof decks
- For rubber membrane and urethane foam roofing materials

Straight-sided, prefabricated, leak-proof curbs provide compatibility between ventilator, curb, and roof opening on commercial and industrial buildings. Most include 1" insulation and integral damper tray. Curbs are for flat roof decks with up to 6" of insulation. Roll-formed with 18-ga. galvanized steel and 1 welded side for added strength. Fixed curbs include a 1½" lap-joint wood nailer. Adjustable curbs are shipped unassembled.

Rooftop Accessories

Rooftop Equipment Mounting Rail—Provides uniform mounting pedestals for various roof-mounted equipment.

Flat Roof Flashing—Flexible rubber cap fastens to seamless aluminum base for secure, watertight seal. Stainless steel clamps included.

Shingle Roof Flashing—Galvanized base with elastomeric center collar for slopes up to 40°.

Corrugated-Metal Roof and Wall Flashing—1-pc. weather-resistant EPDM flexible rubber flashing with integral aluminum base.

4YN42—Includes carry box, seam tape to join pieces of rubber, adhesive-backed cover tape for repairing punctures and tears in membranes, and adhesive-backed flashing tape to repair corner molding and flashing. Also includes primer wash and applicator, scissors, and seam roller.

Hooded Axial Belt-Drive Roof Ventilators

Dayton®

- Max. inlet air temperature: 104°F

Designed for roof-mounted exhaust or supply of clean air in factories, warehouses, and other large facilities. Heavy-gauge galvanized steel construction features hinged hood with bird screen, providing convenient access to motor and drives. Strong, weathertight hood is constructed of interlocking arched galvanized panels. Bird screen and hood come preassembled (except 54" and 60" sizes). Base requires field assembly with hardware provided. Housing, fan, and drive packages are shipped separately. Reversible exhaust/supply ventilators include wall-mounted reversing switch.

Dayton

Hooded Gravity Roof Ventilators

Designed for nonpowered ventilation or can be used in conjunction with powered exhaust, supply, or reversible fans. Strong, weathertight hood is constructed of interlocking, arched, galvanized steel panels. Bird screen and hood come preassembled (except 54" and 60" sizes). Base requires field assembly with included hardware.

Axial Belt-Drive Upblast Exhaust Ventilators

- UL-705 Listed for Power Ventilators
- Max. inlet air temperature: 120°F
- Air handling quality bearings are selected to meet a minimum of L10-100,000 hr.
- 24" propeller dia. units feature sealed pillow block bearings
- 30" propeller dia. and larger units feature regreasable pillow block bearings

For use in industrial and commercial buildings, including warehouses, manufacturing facilities, foundries, and laboratories. Units are highly weather resistant, with housings constructed of heavy-gauge galvanized steel, bolted seams, and reinforced edges for added strength. Drive frames are die-formed, galvanized structural steel, providing a rigid platform for motors, shafts, bearings, and drives. Fabricated steel propellers have steeply pitched blades to generate low sound levels. Integral butterfly dampers prevent unwanted backdrafts and have magnetic latches to minimize damper flutter when not in use. Built-in lifting lugs speed installation; the windband is removable for easy inspection.

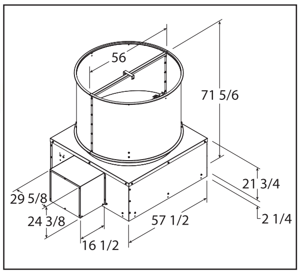
** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA standard 301. Values shown are for installation Type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ 230V only.*



Emergency Smoke Exhaust Ventilators

- Spring-loaded damper lifters meet UL-793 Snow Load Rating
- UL Listed for Emergency Smoke Control
- Max. inlet air temperature: 120°F continuous operation; 500°F for 4 hr.; 1000°F for 15 min.
- High-temperature regreasable pillow block bearings

For use in industrial and commercial buildings such as manufacturing facilities, foundries, and laboratories. Heavy-gauge, galvanized steel fans feature a 165°F fusible link on damper lifters. Belt tubes have heat shields. Magnetic damper latches prevent positive pressure from lifting dampers. Windbands have lifting lugs. Roof curb required for new installations.

Whole House Fans

These fans circulate fresh air through a home to freshen the indoor air and cool the home without turning on air conditioning which helps lower utility costs.

Energy-Saving Quiet-Design Whole House Fans— Have an electronically commutated (EC) motor and use less energy than whole house fans with a PSC motor. They produce less noise than standard whole house fans. These fans pull in fresh air through open windows and exhaust stale air through ventilation openings in the attic.

Quiet-Design Whole House Fans—Produce less noise compared to standard whole house fans and have a PSC motor for smooth, soft, start-ups. Fans pull in fresh air through open windows and exhaust stale air through ventilation openings in the attic.

Standard Whole House Fans— Mount to a ceiling and have a permanent split-capacitor (PSC) motor for smooth, soft, start-ups. Fans pull in fresh air through open windows and exhaust stale air through ventilation openings in the attic.

Window-Mount Whole House Fans—Mount to window trim to circulate fresh air through a home where it is not possible to install permanent attic-mounted whole house fans. They do not require a hole to be cut in the ceiling and the window can be closed behind the fan to secure the home or keep bad weather out.

Ceiling Truss Shutters and Ceiling Shutters

Fit flush in ceiling opening below whole-house fans. Tie rods at each side of shutter assure uniform opening when fan is operating. White extruded aluminum frame with 1½" flange and 3⁄16" dia. mounting holes. White louvers with felted edges. Truss shutters install without framing or cutting ceiling joist.

Economy—Max. velocity: 1500 fpm. Nylon fasteners for quiet operation.

Premium—Max. velocity: 2250 fpm. Louvers reinforced with galvanized steel strip.

Optional Shutter Motor—Not for use with truss shutters. Relieves starting load on fan motor by automatically opening and closing shutter. 60 Hz, 120/240V. Overall dim.: 8½"H x 4½"W x 7½"D. Includes installation hardware.

Ceiling Shutter Cover—Insulated cover helps reduce energy costs by stopping air infiltration and reducing heating and cooling loss. Features easy hook-and-loop attachment, and a trim-to-fit design for a customized installation. White front and reflective foil back.

Backdraft Dampers/Gable Shutters

- Max. velocity: 1500 fpm
- 1½" flange

Designed for use with gable-mounted power attic ventilators, these shutters feature aluminum construction and flush mount to ease installation. They also open automatically when ventilators are running. Weather stripping on blades helps provide a positive seal when not in use. Tie rods on blades help to ensure uniform opening while fans are operating. Shutters are not for use with solar-powered, automatic gable-mount attic ventilators.

How to Select Power Attic Ventilators

For proper attic ventilation, the Home Ventilation Institute recommends a system that provides at least 10 air exchanges per hour. Use the following formula to determine the fan capacity (cu. ft. per min., cfm) needed to provide this minimum airflow:

Attic Square Feet x 0.7 = cfm

Note: For roofs pitched 7/12 or higher, you may want to add 20% more cfm capacity to handle the larger volume of attic space; 30% more for roofs 11/12 and higher.

Gable Mounted 10W199

Garage Mounted 45AM66

Roof Mounted 10N201

120V Attic Ventilators

- Automatic control

These attic ventilators turn on automatically and provide proper airflow to help prevent heat and moisture buildup. They can reduce energy costs by circulating air, cooling attics, and reducing overall air conditioner strain.

Dayton Commercial/Industrial-Duty Air Curtain Selection Guide

Because no single air curtain cabinet is 100"W, use one 6E822 (60") and one 6E824 (42") to span a 100"W opening. It is acceptable for cabinets to be slightly wider than the opening. Each cabinet requires a blower assembly.

Use Table A to determine the horsepower (HP) of the blower required for your air curtain cabinet. Blower HP is determined by mounting height, purpose of the air curtain (thermal barrier, etc.), and the wind speed that the air curtain is expected to neutralize.

For extreme conditions (gusty winds or heavy insect control), select a blower HP 1 size larger than what the table recommends. Indoor installations assume a wind speed of 5 mph, unless otherwise specified.

After selecting the HP for your application, use Table B to find the blower stock number that matches the available electrical power. See this page for complete electrical specifications for each blower. Air curtain overlap of door openings is acceptable.

Blower Selection Example:

Assume a 10-ft.-high x 100"-wide opening into a walk-in cooler, and an available 120V, 1-phase electrical circuit to operate the air curtain.

In Table A, find **Walk-In Cooler**. In column labeled **10 ft.**, find ½ HP across from 5 mph wind speed (indoor installations assume 5 mph). Knowing that a ½-HP blower is required, use Table B to find 2 possibilities: 6E820 and 6E817. Select two 6E820 blower assemblies (120V, 1-phase), 1 for each cabinet.

Table A: Determine Blower HP @ Mounting Height (ft.)

Wind Speed (mph)	Thermal Barrier 8 ft.	Thermal Barrier 10 ft.	Insect Control 8 ft.	Insect Control 10 ft.	Walk-In Cooler 8 ft.	Walk-In Cooler 10 ft.	Walk-In Freezer 8 ft.	Walk-In Freezer 10 ft.

** Complete air curtain; see below for specifications.*

Dayton®

Commercial/Industrial-Duty Air Curtain Cabinets

Modular cabinets accept any of the blowers on this page, and may be mounted in series to accommodate openings from 3 to 12 ft. wide. A 96"-wide door, for example, would use two 48"-wide air curtains. A complete air curtain consists of 1 air curtain cabinet and 1 blower.

Note: Find information on Air Curtains and Accessories at Grainger.com and search for "air curtains".

Compact and Drive-Through Window Air Curtains

- 120V
- Each unit is complete with blower

COMPACT LOW PROFILE

For transoms and other openings requiring a thermal barrier. Use up to 3 curtains in series for wider spans. Maximum distance from nozzle to floor is 8 ft. 120V 2-speed motor. 2-speed switch included.

DRIVE-THROUGH WINDOW

Prevents entry of dust, fumes, and insects. Great for service windows 30" wide or less. Maximum distance from nozzle to counter is 5 ft. 120V single-speed totally enclosed motor. 3-prong grounded plug.

BERNER INTERNATIONAL

Air Curtains

Provide a sustainable solution that helps lower energy costs by eliminating untempered outside air from entering through open doors. A sanitary solution that deters flying insects from entering through open doors. Models use an invisible air barrier to protect the opening and are safer than plastic vinyl strip curtains.

Drive-Through Window, Unheated and Drive-Thru Window, Heated—Air curtains help reduce infiltration of fumes and insects, and maintain comfort at drive-up windows. For indoor use.
- Corded models

Low-Profile, NSF 37, Unheated and Low-Profile, 2-Speed, Heated—Help increase energy savings, comfort, and insect control. Heated models for front or rear entry doors; unheated units for rear entry doors. Heated models are for indoor use. Unheated models are for indoor/outdoor use and UL-EPH Listed per NSF Standard 37.
- Hardwired

Multipurpose, NSF 37, Unheated and Multipurpose, 3-Speed, Heated—Provide energy savings, comfort, and insect control. Heated models for front or rear entry doors; unheated units for rear entry doors. AMCA Certified air performance. Heated models are for indoor use. Unheated models are for indoor/outdoor use and UL-EPH Listed per NSF Standard 37.
- Hardwired

Multipurpose, High Velocity, Unheated—Block entry of wind and insects, and help increase energy savings and comfort. Ideal for shipping/receiving and loading dock doors. AMCA Certified air performance.
- Hardwired

 # dBA is measured in free air 10 ft. from the nozzle.

Air Curtains

32V336

- Hardwired unless specified
- Require field-supplied hardware
- 5-yr. manufacturer's warranty for unheated units; 18 months for heated units

Heated and unheated models help cut utility bills, keep the environment clean, and deter dust, flying insects, and pollutants. Rugged construction and easy to install. The air curtain design provides consistent performance, maintains consistent temperatures, and reduces loss of conditioned air. More efficient than plastic strip curtains.

LOW PROFILE, LPV2 SERIES

- 115V models have 3-prong grounded plug; all others are hardwired
- Mounting plate included
- LPV2 models include variable speed control

Sleek, quiet, compact, 1/6 HP design for front entry doors and drive-through windows. Heated models help create a more comfortable work area by providing a warm protective barrier over openings exposed to low ambient temperatures. NSF 37 models are for food preparation areas; sanitation-certified for heights up to 7 ft. per NSF Sanitation/ANSI 37 standard. Models greater than 72" are double units joined with a 2" mounting bracket and must be center supported.

Multipurpose, Recessed 10N078

MULTIPURPOSE

- STD2, N2, NH2, HV2 unheated models are AMCA rated

Heated models provide a comfortable work area with warm protective barrier over openings exposed to low ambient temperatures. Energy-saving performance; fasten to a wall on both ends without intermediate support. Three-phase require a motor control panel, sold separately. NSF 37 models protect food preparation areas; sanitation-certified for heights up to 7 ft. NSF filters found on Grainger.com.

Recessed—Mount in ceiling. Minimal equipment visibility. Recessed housing enclosed.

CONTROL PANELS AND DOOR LIMIT SWITCHES

Required Motor Control Panels for 3-Phase Air Curtains—HOA switch included with panel. Auto mode requires optional door limit switch 2CLA2 (UL, NEMA 1) to provide automatic On/Off as door opens/closes, sold separately below.

- Control panels have NEMA 1 enclosure

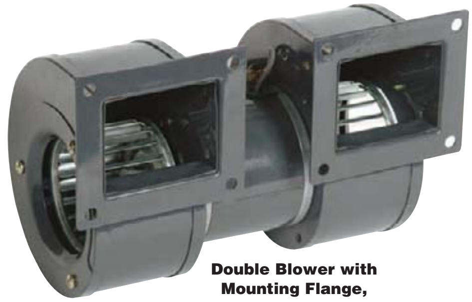
Description	Item No.
Optional Door Limit Switch	
Roller Plunger Door Switch, 120/208-230 Voltage, 60 Hz, 1 Phase, 20 A, 2 ½ in H x 3 in W x 2 in D	**2CLA2**

 # dBA is measured at 10 ft. from the nozzle in an open field. STD2, PH10, N2, NH2, and HV2 are CFM ratings shown and are based on tests and procedures performed in accordance with AMCA Publication 211.

Blower w/ No Mounting Flange, 1TDP4

Blower w/ Mounting Flange, 1TDR3

Double Blower with Mounting Flange, 1TDP8



Dayton®

30 to 312 CFM PSC, Shaded Pole, and DC Blowers, Rectangular Outlet

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F
- Motor enclosure: open

Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain CFM at higher static pressures. Motors have cast-aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life.

Note: Not for use with speed controllers.

Dayton®

12 to 79 CFM PSC and Shaded Pole Blowers, Round Outlet

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F
- Motor enclosure: open

Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain CFM at higher static pressures. Motors have cast-aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life.

Note: Not for use with speed controllers.

Dayton®

High-Temperature PSC Blowers, Rectangular Outlet

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Continuous-duty operation
- Max. inlet air temp.: 450°F
- Max. ambient temp.: 104°F
- Motor insulation: Class B

1TDV1

Externally mounted cooling fan (between motor and blower wheel) keeps motor cooler for a longer service life. Durable motor/blower design features ball bearings, cast-aluminum end shield, rolled steel body, and a steel cooling fan. Permanent split capacitor motor operates more efficiently than a comparably sized shaded pole motor. Blower housing has side mounting tabs and 3-sided mounting flange, except 1TDV1 has no outlet mounting flange. High-temperature flat black enamel finish. Excellent for general heating, cooling, ventilating, or component cooling.

Note: Motor must be positioned in an area where temperature does not exceed 104°F. CFM values shown in the table below are representative of catalog specifications within a tolerance of ±15%.

OEM Specialty PSC and DC Blowers

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F

Powerful direct-drive blowers with forward-curve wheels provide economical air delivery for general heating, cooling, ventilating, or component cooling. Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain cfm at higher static pressures. Motors have cast aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life. Gray enamel finish.

Blowers without outlet flange can use 5TCJ3 housing support for mounting. 2-speed blowers require 1DGZ9 2-speed switch (not included; see page 2929).

Note: Not for use with speed controllers.

PREPUNCHED METAL HOUSING SUPPORT

Enables base mounting 1TDT4, 1TDT5, 1TDT9, 1TDU1, and 1TDU2 for bottom horizontal, top horizontal, and upblast discharges. 12¾"L. Gray finish. Sold in pairs.

Low-Profile
1TDU7

- All-position mounting
- Continuous-duty operation
- Min./max. operating temp. range: -20° to 104°F
- Motor insulation: Class B
- Automatic thermal protection

Blowers provide economical air delivery for general heating, cooling, ventilating, or component cooling. Designed to exhaust or ventilate cabinets, office machines, electronic equipment, corn stoves, pellet stoves, and fireplace inserts.

Note: Not for use with speed controllers.

Transflow—Heavy-duty, shaded-pole motor (permanent split capacitor on 3HMK2) features an oversized stack to enhance cooling and product life. Durable metal cooling-fan blade. Extruded aluminum, 1-pc. housing keeps blower wheel and motor properly aligned—reduces vibration. Permanently lubricated sleeve bearings on motor (3HMK2 has permanently lubricated ball bearings) and blower housing significantly reduce motor hum transmission into equipment. 13" leads. 3HMK2 features open dripproof motor enclosure.

Low-Profile—Forward curve centrifugal blower wheels, mounted in twin scroll housings, provide increased airflow at higher pressures. Double inlet maximizes airflow efficiency. Ball bearings and cast-aluminum end shields connect blower to heavy-duty, permanent split capacitor Dayton motor. 6 rubber isolators on mounting holes reduce vibration and noise. Flat black finish; compact design. 17" leads.

Single-Inlet Forward-Curve Belt-Drive Blowers

- Housing can be rotated to any of 4 standard discharge positions
- Max. inlet air temp.: 150°F
- Max. ambient temp.: 104°F

Single inlet for quiet, efficient performance in general ventilation, exhausting, air conditioning, and industrial air-moving applications. Precision, balanced, forward-curved steel wheels. Die-stamped steel housing. Single-phase motors have automatic reset thermal protection. Drive package components are packed separately.

Housing Supports

Dayton®

Direct-Drive Double Inlet Full- and ¾-Width Forward-Curve Blowers

- Blower wheel is reinforced to ensure optimal performance and trouble-free service
- Discharge can be rotated in four 90° increments
- Units replace most direct-drive blowers with the same horsepower ratings
- Max. inlet/ambient temp.: 104°F

Used in new and replacement installations for heating, air conditioning, and ventilation systems. Heavy-gauge steel blower housings have a galvanized steel finish, except assembled models have a gray enamel finish. Steel wheels have corrosion-resistant finish.

UNASSEMBLED

Units include housing support with resilient pads, adjustable motor mounting bracket with hardware, and assembly instructions. Bracket for 9½" units adjusts to fit blower motors 3½" to 6⅛" long. Bracket for 10⅝" units adjusts to fit blower motors 3¹³⁄₁₆" to 6⅝" long.

 # WARNING: Motor overload will result if blower is operated at static pressures below performance shown.

Double Inlet Full- and 3/4-Width Forward Curve Belt-Drive Blowers

Dayton®

- Max. blower operating temp.: 150°F
- Max. motor operating temp.: 104°F
- Discharge can be rotated in four 90° increments

Prelubricated, sealed ball bearings with rubber isolators and dynamically balanced forward curved wheel. Precision-ground shafting with both keyways and flats for a wide range of drives and HP. A variable-pitch motor sheave is provided when ordered, complete with drive package for speed adjustment. Die-stamped steel housing with mounting supports. Mounting hardware and isolation grommets included. Blowers include a motor mounting bracket built for 1½ HP maximum. 1/6- to 1½-HP motor and drives for bottom horizontal discharge packed separately, when ordered complete. Longer or shorter belt may be required for other discharge positions. 2- to 5-HP motors are floor mount only.

1/6 to 1½ HP with Drive Package, Shown Assembled

2 to 5 HP with Drive Package, Shown Assembled

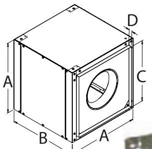
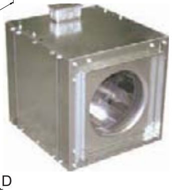
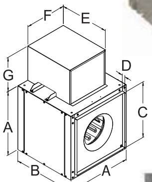
*# WARNING: Motor overload will result if blower is operated at static pressure below performance shown. ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed.*



Direct-Drive





Belt-Drive

In-Line Duct Blowers

- Aluminum backward-inclined, nonoverloading centrifugal wheel design
- Mount horizontally or vertically
- Max. ambient temp.: 104°F

Designed for indoor clean air applications including intake, exhaust, return, or makeup air systems in industrial or commercial buildings. Collars simplify duct connections. Panels on each side provide quick access to internal fan components.

Direct-Drive—Units are speed controllable. 2RB86, 10C387, and 10C388 have 3-speed motor. Units are preassembled.

20UD15 to 20UD17 feature electronically commutated (EC) motor on the blowers, providing up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional Speed Control Kit 43Y140 (sold on page 2955) allows you to manually adjust a fan's speed from a remote location and mounts to a wall using a 2x4 junction box.

- Max. inlet air temp.: 104°F
- Include NEMA 1 junction box

Dayton

AMCA Certified Ratings — Sound and Air Performance

Belt-Drive—Bearing cover and motor cover provide longer service life. Drive package components packed separately.

- Max. inlet air temp.: 160°F
- Pillow block bearings

DELHI

Centrifugal In-Line Belt-Drive Duct Blowers and Filters

3F532 Shown with optional filter rack

- Ball bearing motors are rated for continuous duty
- Filter section has quick-access, washable 1"-thick aluminum mesh filter panel
- All-position mount (shaft horizontal only)
- Max. inlet/ambient air temp.: 140°F

The internal air mover is a quiet, forward-curved, ball bearing, double inlet blower. Access panel allows convenient motor and drive installation and servicing from either side. ½" internal fiberglass insulation helps isolate noise and overcome condensation on cabinet when used in cooling applications. Use indoors with clean air heating, cooling, and ventilating systems. Up to 25% blower speed and cfm reduction using variable pitch motor sheaves when ordered with motor and drives. Drive package components are packed separately.

Single-Inlet Forward Curve Direct-Drive Blowers

Dayton

Blower With Motor

- Housing can be rotated to 8 discharge positions in each rotation
- Welded steel construction
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Provide high-volume ventilation when duct systems are required. Motor packed separately when ordered with blower.

Note: Review OSHA codes. OSHA complying guards are required where fan blades are exposed and within reach of personnel.

High-Volume—Great for medium pressures; combine characteristics of high-volume and high-pressure blowers. 16-ga. steel housing with welded, airtight joints. Heavy steel wheel. All motors are rigid mounted.

Single-Inlet Forward Curve Belt-Drive Blowers

Dayton

Blower Without Drive Package

- Heavy-gauge steel construction
- Continuous duty
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Adjustable top motor mount moves from top to rear mounting. Easily altered to required discharge position by drilling new motor mounting holes, rotating blower housing on base, and bolting in position. Motor is resilient-mounted and automatic reset thermal-protected.

High volume at low velocity. Shipped in bottom horizontal discharge position. Drive package components packed separately.

Note: Review OSHA codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

Single-Inlet Forward Curve Quiet Design Belt-Drive Blowers

- Sturdy arc-welded housing and frame
- Gray baked-on epoxy finish
- Max. inlet air temp.: 250°F
- Max. ambient temp.: 104°F

Extra-quiet, efficient blowers provide high volume performance. Adjustable to 8 standard positions. Ball bearings. Dynamically balanced, clockwise rotating steel wheel. V-belt drive with weatherproof drive cover included. Drive package components packed separately.

Models with a wheel diameter of 10½", 13½" and 16¼" are available on Grainger.com®.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

Backward Incline Belt-Drive Blowers

Dayton

AMCA Certified Ratings — Air Performance

- Nonoverloading, dynamically balanced wheels
- Sizes 10½" to 24½" feature flat blade wheel; sizes 27" to 36½" have airfoil wheel
- Both wheel styles provide full Class 1 performance range
- Welded steel housing
- Gray baked-on epoxy finish
- Max. inlet air temp.: 250°F
- Max. ambient temp.: 104°F
- Pillow block ball bearings

Motor cannot be overloaded at any given rpm and horsepower regardless of static pressure applied to the system. Clockwise rotation viewed from drive side. Blowers are shipped in bottom horizontal discharge position and can be changed in the field to 7 additional standard discharge positions. Sizes 10½" to 20" have variable-pitch sheaves; larger sizes have fixed sheave drive. Include weatherproof drive cover. Drive packages are packed separately.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

** Performance shown is for installation Type B: free inlet, ducted outlet. Power ratings (BHP) do not include drive losses. Performance ratings do not include the effects of appurtenances (accessories). ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed. ‡ 3C716 has no inlet side support and has only 4 mounting holes.*

High-Pressure Radial Blade Belt-Drive Industrial Blowers

Dayton®

- Housing can be rotated to 8 discharge positions in each rotation
- 12¼" blower handles stringy material, grain, sawdust, granular material, and particle-laden air of nonexplosive gases
- 15⅝" to 36½" blowers handle grain, sawdust, granular material, and particle-laden air of nonexplosive gases
- Max. inlet air temp.: 250°F; increases to 450° with optional heat slinger
- Max. ambient temp.: 104°F

Units are built for CW rotation and bottom horizontal discharge, but can easily be converted to CCW rotation by removing and remounting housing opposite of standard. With weatherproof drive covers. Heavy-gauge, continuous arc welded steel construction with gray baked-on epoxy finish. Blowers have 6 mounting points.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

WARNING: Ductwork required to prevent motor overload.

Optional Heat Slinger—Split-type aluminum slinger mounts on blower shaft between housing and bearing. Cools bearing, allowing blower to handle inlet air temps. up to 450°F. When used with heat shield between motor and housing, blower can handle inlet temperatures up to 500°F.

BASE DETAIL
No. 4C129

High-Pressure Radial Blade Belt-Drive Blowers

Dayton

- 10⁹⁄₁₆" to 13½" dia., self-cleaning, radial blade wheel
- CW or CCW rotation
- Steel housing with gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Great for industrial applications where clean or light dust loading conditions exist. Blowers come complete with weatherproof drive cover and dynamically balanced, heavy-duty die-cast aluminum wheels. Self-aligning ball bearing pillow blocks. Bottom horizontal discharge, but can be changed to 7 other discharge directions.

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301.

Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

BLOWERS WITH DRIVE PACKAGE

Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed in table, except 4C129 cannot be set up for downblast operation. Drive package components are packed separately.

Radial Blade Direct-Drive Blowers

- Housing can be rotated to 8 discharge positions in each rotation
- Welded 16-ga. steel housing and base
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Self-cleaning, cast-aluminum wheel can be used to convey stringy or straw-like material and is perfectly balanced and aligned. Units are built for CW rotation and bottom horizontal discharge, but can easily be converted to CCW rotation by removing and remounting housing opposite of standard. 2C862 to 2C864 have 4 mounting points. 4C217 and 4C121 have 6 mounting points. Motor packed separately when ordered with blower. For exhaust systems where air contains dirt, lint, dust, and other lightweight foreign material.

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Note: Review OSHA Codes. OSHA complying guards are required where fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

Radial Blade High-Pressure Direct-Drive Blowers

- Housing can be rotated to 8 discharge positions in each rotation
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Paddle-type, self-cleaning, die-cast wheels rotate clockwise and are precision balanced for top performance.

Bottom horizontal discharge. Great for small-ducted dust exhaust systems and wherever dust collection bags are necessary.

For proper installation, floor-mount vibration isolators (4C875, page 2983) are recommended as follows:

For steel models, order 4 vibration isolators for all except 4C330, (order 6 vibration isolators for 4C330).

For stainless steel models, order 4 vibration isolators for all except 45J503, (order 6 vibration isolators for 45J503).

For aluminum models, order 4 vibration isolators for all except 45J509, (order 6 vibration isolators for 45J509).

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

*# Motor overload will result if blower is operated at static pressure below performance shown. † Values shown are estimated sound pressure levels. * 230V only.*
*** Replacement blower wheel 2ZB44 is for use with 2C820; 45J464 is for use with 6YG63.*

Utility Exhaust Blowers

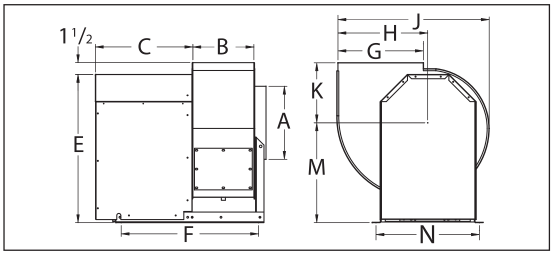
Dayton® MASON INDUSTRIES amca CERTIFIED RATINGS AIR PERFORMANCE

- For spark-resistant industrial applications
- Aluminum wheel with shaft seal and rub ring

Scroll is clockwise rotation and can be rotated in 45° increments to 8 positions; shipped in upblast position. Units feature bolted access door and gray polyester coating. Weather hood included. All models are UL and C-UL Listed.

Note: Review OSHA Codes. OSHA complying guards required when fan blades are exposed and within reach of personnel.

WARNING: Use a hazardous location motor where flammable vapors are involved.



Direct-Drive—488V85 and 488V87 have electronically commutated (EC) motors for up to 70% energy savings. Potentiometer dial on motor allows speed control down to 80%. Internal or external mounting.

- UL-705 Listed for power ventilators
- Max. inlet temp.: 180ºF
- Optional EC Control Kits 43Y140, 35YV92, and 35YV94 on page 2955

Belt-Drive—For commercial kitchen exhaust applications. 1" threaded drain connection point on bottom of blower. Fan motor and drive package components packed separately. Blower is only permissible for UL-762 applications when mounted on exterior of the building, scroll must remain in upblast position for proper grease draining.

- UL-762 Listed for Restaurant Exhaust Appliances (YZHW)
- Max. inlet air temp.: 300°F
- Max. ambient temp: 104°F

** Performance certified is for installation type B: free inlet, ducted outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). The AMCA Certified ratings Seal applies to air performance ratings only. ‡ Motor is rated 208-230V. ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed.*

Corrosion-Resistant Direct-Drive Utility Blowers

PLASTEC™

- 115/230V are 1-phase
- 230/460V are 3-phase
- Max. inlet air temp.: 140°F
- Max. ambient temp.: -13°F
- Totally enclosed fan-cooled motors
- Ball bearings
- Rotation: CCW

Have all-polypropylene construction that is acid, corrosion, and UV resistant with no metal in the airstream. Housing has thick wall construction to help provide maximum protection against acids and corrosion, and has seamless construction to prevent leakage of corrosive air fumes. Models with hazardous location motors are for use in locations with potentially explosive atmospheres. All blowers can be used to exhaust fumes from highly corrosive environments found in chemical plants, laboratories, cleanroom, food processing, pharmaceutical, and water treatment applications.

Convex

Concave

Double Inlet Direct-Drive Blower Wheels

Dayton

- Forward curve
- Rotation facing hub
- Hubs include set screws

Wheels produce high air volume with low vibration for diverse air-moving applications. Individually cartoned for greater protection.

Concave or convex back plates allow motor location on either side of the blower housing. For ventilation, air conditioning, heating, and dehumidifying in industrial and commercial applications.

Note: Single inlet concave models available on Grainger.com®.

Direct-Drive Blower Wheels

REVCOR REVOLUTIONARY AIR FLOW™

- Single inlet: rotation facing back disc (closed end) of wheel
- Double inlet: rotation facing hub
- Hubs include set screws

Wheels produce high air volume with low vibration for diverse air-moving applications. Individually cartoned for greater protection. Convex back plates allow motor location on either side of the blower housing. For ventilation, air conditioning, heating, and dehumidifying in industrial and commercial applications.

Note: Additional models available on Grainger.com®.

Dayton

Portable Blowers/Carpet Dryers

- Space-saving design
- 3-conductor power cords

Dry carpets, furniture, and hard floors after spills and cleaning treatments. Have a thermally protected motor that will automatically shut down if overheated, then will restart automatically once motor has cooled. Models are stackable up to 5 units high except 4XLE2. All blowers/dryers are suitable for use in commercial janitorial and plumbing applications. 4XLE2 is UL and CUL Listed.

DRI-EAZ

Industrial/Jobsite Blowers and Carpet Dryers

- Stackable compact design
- Hospital-grade cord with lit plug, except 425X94

Rugged, compact, and efficient units are ideal for ventilation and for drying floors, structures, and walls. Accessories are available on Grainger.com.

39C367—Quickly dries up to 80 sq. ft. of carpet or hard floors. Compact and lightweight model is ideal for bathrooms, cabinets, or closets. ETL tested to UL/CSA standards.

- 360° airflow

38MC15—Lightweight air mover dries floors, stairways, and walls. Variable speed control and digital amp readout.

- Daisy chain up to 10 units on 1 circuit

5UNZ4—Use to ventilate confined spaces, create negative air pressure, and remove odors or dust. UL and C-UL Listed.

- High static pressure
- Duct up to 125 ft.

425X94—High-velocity, variable air flow for ventilating and drying ceilings, floors, and walls. Focus airflow with integrated pivot-and-lock stand. ETL tested to UL/CSA standards.

- Up to 2.7A draw
- Can daisy chain up to 4 units on 1 circuit

786F11—Low-profile unit is suitable for use in confined space ventilating and has a GFCI-protected power outlet socket with reset switch. ETL tested to UL/CSA standards.

- Up to 2.1A draw
- Can daisy chain up to 6 units on 1 circuit

Air King Ventilation Products

Pivoting Utility Blowers

- 120V, 60 Hz
- 3 speeds
- OSHA-compliant guards

High-velocity, focused air flow and innovative 225° or 270° pivoting fan heads ventilate and cool work areas while keeping dust and debris in check. 2 grounded 120V outlets accommodate power tools or other devices up to 10A total. 3-conductor 10-ft. cords: 1XGG3 and 2EKZ9 Type S with 5-15P GFCI plug; 1XGG2 Type S with 5-15P plug.

2EKZ9 is safety yellow. See instructions for applicable limitations of use. ETL and C-ETL Listed.

Window and Wall Air Conditioner Selection Guide

Determine Cooling Capacity (BtuH) needs using table at right. The table does not include people or equipment loads. Add 600 BtuH per person. For heavy shade, reduce by 10%. For sunny spaces, increase by 10%. For use in a kitchen, add 4000 BtuH.

CEER (combined energy efficiency ratio): The higher the number, the more efficient the unit.

STANDARD 8-FT. CEILING Average Coverage Area	Cooling Capacity Needed
100 to 150 sq. ft.	4000 to 5999 BtuH
150 to 250 sq. ft	6000 to 6999 BtuH
250 to 300 sq. ft.	7000 to 7999 BtuH
300 to 350 sq. ft.	8000 to 8999 BtuH
350 to 400 sq. ft.	9000 to 9999 BtuH
400 to 450 sq. ft.	10,000 to 11,999 BtuH
450 to 550 sq. ft.	12,000 to 13,999 BtuH
550 to 700 sq. ft.	14,000 to 17,999 BtuH
700 to 1000 sq. ft.	18,000 to 20,999 BtuH
1000 to 1200 sq. ft.	21,000 to 22,999 BtuH
1200 to 1400 sq. ft.	23,000 to 23,999 BtuH
1400 to 1500 sq. ft.	24,000 to 29,999 BtuH
1500 to 2000 sq. ft.	30,000 to 33,999 BtuH
2000 to 2500 sq. ft.	34,000 to 35,000 BtuH

FRIEDRICH

Commercial-Grade Window Air Conditioners

- Programmable
- Quiet operation
- 24-hr. timer
- Auto restart
- Left/right reversible power cord
- Control panel lockout (ON-OFF)
- Anti-intrusion protection

Made for commercial-grade applications with components that withstand more demanding environments. Commonly used to cool offices, retail stores, multi-family buildings, barracks, and dorms. Install in a window or through the wall. Units have remote capability and can be managed via Wi-Fi to allow centralized control of settings for one or more units. They're also compatible with Amazon Alexa and Google Home.

Window Mounting Kits—Window kits are included with Cooling-Only models, but are an accessory item for Cooling/Heating models. Window kits are required for window installation.

Carbon Filters—Remove odors and VOCs. Achieve up to a MERV 6 rating when used with standard filter.

FRIGIDAIRE LG perfect aire FRIEDRICH

Residential-Grade Window Air Conditioners

- Programmable, except 470D39 and 61CZ61
- 24-hr. timer, except 470D39 and 61CZ61

Units are made of residential-grade materials and have a decorative front grille that blends in with home interiors. Typically used to cool rooms in houses and apartments. Remote capability, except 470D39 and 61CZ61.

Frigidaire—FHW models are Wi-Fi capable.

LG—61CZ62 has a variable-speed compressor that adjusts the compressor motor speed to regulate temperature for greater energy efficiency.

Perfect Aire—Feature a remote control with a built-in room temperature sensor that regulates room temperature around the remote, allowing the remote to become the thermostat.

Friedrich—CCW and CEW models can be installed in a window or through the wall. All units can be managed via Wi-Fi to allow centralized control of settings. Compatible with Amazon Alexa and Google Home. Units have Seacoast Protection to guard against corrosion.

- Quiet operation
- Auto restart
- Left/right reversible power cord
- Washable filter

Hazardous Location Through-the-Wall Air Conditioners

FRIEDRICH

- Hot gas bypass for cooling operation at low ambient temps., down to 45°F (7°C) without freezing

Sealed motor and solid-state relays prevent sparking while cooling potentially hazardous environments. Can be used where flammable gases, vapors, and liquids are handled or used within enclosed containers or systems, but are not normally present in concentrations high enough to be ignitable. Commonly used to cool laboratories, control rooms, and storage areas. These commercial-grade units have an e-coated coil and powder-coated steel cabinet to resist corrosion. Units are hardwired and have a 15A circuit with a time-delay fuse. Meet ANSI/UL 484 Room A/C, SASO 2681, UL Listed for use in Class I, Div. 2, Groups A, B, C and D, ISA 12.12.101, and NFPA 70.

Commercial-Grade Through-the-Wall Air Conditioners

- Programmable
- Quiet operation
- 24-hr. timer
- Auto restart
- Control panel lockout (ON-OFF)
- Anti-intrusion protection

These through-the-wall air conditioners are made for commercial-grade applications with components that withstand more demanding environments. They're commonly used for cooling offices, retail stores, multifamily buildings, barracks, and dorms. Units have remote capability and can be managed via Wi-Fi to allow centralized control of settings for one or more units. They're also compatible with Amazon Alexa and Google Home. New installations require a wall sleeve and fit in Friedrich and Fedders A and B 27" sleeves.

Residential-Grade Through-the-Wall Air Conditioners

FRIEDRICH · perfect aire · FRIGIDAIRE · GE

- 24-hr. timer
- Auto restart
- Washable filter

Through-the-wall air conditioners that are made of residential-grade materials and have a decorative front grille that blends in with home interiors. They're typically used to cool rooms in houses and apartments. Units include a remote control.

Friedrich—Units can be managed with Wi-Fi and are compatible with Amazon Alexa and Google Home. Units have Seacoast Protection to guard against corrosion. Trim kit is included to give units a finished appearance. Chassis fits 24½" to 27" sleeves.
- Quiet operation

Frigidaire—Chassis fits most existing wall sleeves. New installations require Wall Sleeve Kit 5PP42.
- Programmable

GE—Units are ADA compliant. Wall sleeve is included.
- Programmable

Perfect Aire—Feature a remote control with a built-in room temperature sensor that regulates room temperature around the remote, allowing the remote to become the thermostat.
- Programmable

Packaged Terminal Air Conditioners with Electric Heat

FRIEDRICH Amana Heating & Air Conditioning

- Quiet operation
- 2-motor design
- Power cord included

Have separate cooling and heating systems for overcoming harsher winter temps. Electric heating element provides heat when temps. fall below freezing. Packaged terminal air conditioners (PTACs) typically run quieter and have longer service than packaged terminal heat pumps (PTHPs), but use more energy for heating. Units with Seacoast Protection guard against corrosion.

Friedrich—Wall sleeve is required for new construction, sold separately.

Amana—New installations require an exterior grille and wall sleeve, sold separately.

Packaged Terminal Air Conditioners with Heat Pump

FRIEDRICH Amana Heating & Air Conditioning

- Quiet operation
- 2-motor design
- Power cord included

Packaged terminal air conditioners (PTACs) have a heat pump that allows for switching between cooling and heating for year-round climate control. Heat pump uses less energy for heating than electrical heat when outdoor temps. stay above freezing; ideal for climates with mild winters. Also called packaged terminal heat pumps (PTHPs), they have an auxiliary electric heater for heating on days when temps. fall below freezing. Units with Seacoast Protection guard against corrosion.

Friedrich—Wall sleeve is required for new construction, sold separately. 467X23 and 467X24 include washable MERV 8 filter.

Amana—New installations require an exterior grille and wall sleeve, sold separately.

Multizone Ductless Mini-Split Indoor Ceiling-Mount Concealed Duct Air Handlers

FRIEDRICH

- 208/230VAC
- Seacoast Protection guards against corrosion
- WiFi-capable
- Programmable
- Remote Control

Install within a ceiling, furr down, or soffit. They can be connected directly to a register or to ductwork. Multiple air handlers can be connected to an outdoor condenser of sufficient capacity to form a multizone mini-split system. New installations require refrigerant line set, sold separately on Grainger.com.

Digital/Wireless App Manifolds

testo

Measure both low- and high-refrigerant pressure to troubleshoot issues such as leaks or to aid when evacuating and recharging refrigeration or AC systems. Manifolds can analyze, store, and send measurement data on refrigeration and AC systems and heat pumps. They have a large graphic display and are Bluetooth capable. 55AD43 only comes with two smart probe pipe clamp thermometers and two refrigeration smart pressure probes, batteries, and a carrying case.

TRIPP·LITE

Heavy-Duty Air-Cooled Portable Air Conditioners

- 24-hr. timer

Provide cool, dehumidified air for cooling people, processes, and equipment. Ideal for rack enclosures, network closets, and areas without access to facility HVAC. Condensate is re-evaporated for drip-free operation, so no floor drain is required and no water tank needs to be emptied.

KOLDWAVE

Heavy-Duty Water-Cooled Portable Air Conditioners

- Ambient temp. range: 70° to 113°F
- 2 cooling speeds

Provide high-capacity air conditioning where no window or outside air source is available. Units connect to a water supply and drain. 18" quick-connect hose included; additional hose kits sold separately. Automatic regulating valve shuts off water flow when the compressor is not running. Great for computer rooms, medical equipment rooms, and telecommunication equipment rooms.

Heavy-Duty Portable Air Conditioners

MOVINCOOL The #1 Spot Cooling Solution

- Air-cooled vented
- Self-contained units are easy to install and operate

Provide cool, dehumidified air for cooling people, processes, and equipment. They're commonly used to cool assembly lines and critical processes.

Climate Pro K Series— Models are designed for heat-sensitive server rooms, hospitals, laboratories, schools, and stuffy offices. May be used for emergency backup and supplemental cooling applications.

Climate Pro X and Classic Series— Designed to spot cool warehouses, manufacturing plants, and outdoor events. Also suitable for process cooling and moisture removal.

Climate Pro D Series (Heat Pump)— Portable heat pumps feature reversible operation to switch between cooling and heating modes for year-round climate control in moderate climates.

Portable Evaporative Coolers

Provide cool, humidified air in areas without combustible vapors, gases, or dust. They require regularly draining and cleaning the water tank and allowing the media to dry thoroughly between uses to prevent odors and clogging from sludge buildup.

Hazardous Location Evaporative Coolers

- 115VAC
- 1 speed

Orange housing color. Sealed switches, cords, motors, and pumps prevent sparking. Rated for Class 1, Division 2 areas where flammable gases, vapors, and liquids are handled or used within enclosed containers or systems, but are not normally present in concentrations high enough to be ignitable. Commonly used in chemical plants, refineries, fuel depots, and garages. They require regularly draining and cleaning the water tank and allowing the media to dry thoroughly between uses to prevent odors and clogging from sludge buildup.

POWER BREEZER

Portable Misting Coolers

- 85-gal. water capacity
- Oscillating head
- Integrated water tank

Circulate atomized water vapor that mixes with surrounding air to cool and humidify it. Coolers help regulate temperatures to protect workers from heat stress and reduce the risk of damage to machinery and products. They require no filters, no connection to ductwork, and have a large tank that supplies water for spot-cooling indoor production lines and warehouses or outdoor sporting events and festivals. Locking casters ease maneuverability from room to room. Optional ducting 55MU73 helps direct cooling mist to specific areas where it's needed.

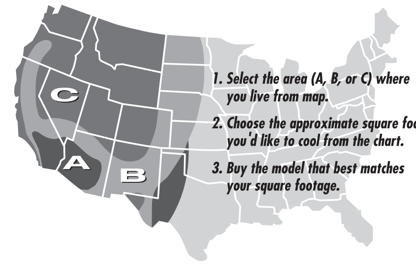
Selecting the Right Size Cooler

Evaporative cooling for residential use is typically limited to lower humidity areas and works best when the dew point is less than 50°F. Coolers are up to 75% more economical than refrigerated air conditioning, making them an ideal source of cooling in western and southwestern regions of the U.S.



1. Select the area (A, B, or C) where you live from map.

2. Choose the approximate square footage you'd like to cool from the chart.

3. Buy the model that best matches your square footage.

Coolers can be used across the U.S. to filter intake air in laundries. They are also excellent in makeup air applications in every state, and they are commonly used in agricultural and greenhouse operations.

Note: Square footages are 8-ft. ceiling heights and are approximations only. Assume an 80°F desired room temp. Since cooling requirements can vary, contact your salesperson if additional information is needed

Ind. Std. Rating*	Item No.	Motor HP	Approximate Square Footage Cooled† A	B	C

3000	4RNN8/2YAD8	⅛	500	600	700

***** *Ind. Std. Rating is a numerical rating for comparing similar models and sizing purposes. † Static pressures, vaulted ceiling, heat load, etc., can dramatically reduce the approximate square footage cooled in this chart.*

ESSICK AIR · Dayton

Multiple-Inlet Residential Ducted Evaporative Coolers

Distribute cool air throughout a home. Units have multiple inlets to draw in air. Media fits at the inlets to provide a sufficient wet surface area for cooling warm air. Units are typically used to replace multiple-inlet coolers in older installations. 453D81 includes a thermostat. Find Residential Ducted Evaporative Cooler Accessories on Grainger.com.

MasterCool Dayton

Single-Inlet Residential Ducted Evaporative Coolers

Hold thicker media than multiple-inlet coolers, which increases contact time with the warm input air for more thorough evaporation. These coolers are used in new installations and as replacements for existing single-inlet coolers. Find Residential Ducted Evaporative Cooler Accessories on Grainger.com.

EssickAir Champion MasterCool Dayton

Window Evaporative Coolers

- 2" pad thickness

Units pull in warm outdoor air, pass it through wet media to remove heat, and blow out the cooled air. At the end of the cooling season, these coolers can be drained and their media can be dried out for long-term storage. Units require no connection to ductwork, sheet metal cutting, or grille assembly.

Manitowoc

Commercial Ice Machines, Bins, and Dispensers

- Gourmet: hard, clear, 8-sided 1⅜" cubes
- Dice: hard, clear, rhomboid ⅞" cube; 48 cubes/lb.
- Half-dice: hard, clear, rhomboid cube, ⅜" x 1⅛" x ⅞"; 96 cubes/lb.
- Nugget: soft, chewable ³⁄₁₀" x ³⁄₁₀" x ½" cubes dispense without hand scooping; slow to melt, less drink dilution

Stainless finish with clear coating provides superior corrosion resistance and resists fingerprints and dirt. 458J99 to 458K74 are ENERGY STAR qualified. Repair parts are available on Grainger.com.

Ice Machines, Built-In Undercounter—Compact machines for small-volume ice production.

458J81 is designed for boardrooms, conference rooms, or business lunch areas. Built-in or freestanding capability. Features multifunction control panel with delay, integral filtration, and oversize, lighted bin opening.

Other models are sized for coffee shops, stadium boxes, break areas, or areas with limited floor space or height.

Ice Machines, Modular Heads, High Capacity—Ideal for movie theaters and other high-volume applications. Programmable ice production with continuous diagnostics keep ice stocked and machine operational. 24-hr. maintenance and diagnostic feedback on easy-read, blue display. Food zone is easy to clean.

- On/Off time or ice volume programs
- Fit on top of Ice Storage Bins (sold separately)

Stationary Ice Storage Bins—Convenient stay-open design keeps bin door out of the way. Soft trim around opening helps silence door closing. Internal scoop holder is above ice line for easy access and better sanitation.

SANI-LAV

Stainless Steel Ice Scoops

Heavy-duty, 18-ga., type 304 stainless steel construction for rust resistance and are fully welded to help ensure there are no spaces where particles can accumulate. Scoops are seamless with large radii to ease cleaning. 53RJ99 and 53RK02 have a 24"L handle to help extend reach. All scoops are suitable for use in beverage, food processing, and material handling applications. Meet NSF/ANSI Standard 2 for Food Equipment.

Scotsman
Ice Systems

Commercial Ice Machines, Bins, and Dispensers

- Gourmet cube: hard, clear, 1" x 1⅛" x 1¼"
- Small cube: hard, clear, rhomboid, ⅞" x ⅞" x ⅜"
- Medium cube: hard, clear, rhomboid, ⅞" x ⅞" x ⅞"

Stainless finish provides corrosion resistance and allows for easier cleaning. For repair parts, go to Grainger.com.

Note: ENERGY STAR qualified where noted.

Ice Makers, Built-In Undercounter—Compact units are designed for low volume, built-in applications. 36N972, 36N973, and 36N959 are designed for small office and board room applications. 36N973 includes an integrated condensate pump. The other undercounter models are designed for low volume applications as in coffee shops or larger break rooms.

Ice Makers, Modular Heads, High-Capacity—AutoAlert indicator lights for advanced diagnostics. Fits on top of ice storage bins, sold separately.

Ice Dispenser, Ice Machine, Water Dispenser, Countertop, Touchless—Touchfree ice and water dispensing makes these units perfect for healthcare and office applications. Legs not included. Equipment stands available for all models, sold separately on Grainger.com.

Ice Dispensers, Hotel, Floor-Standing—Simple push-to-dispense design and large sink depth accommodate almost any size ice bucket. Ideal for lodging and healthcare segments. Automatic fill from ice machine, sold separately.

Stationary Ice Storage Bins—Feature integrated scoop holder and removable ice baffle for easy cleaning. 36N920 and 36N921 are polyethylene construction. Bin adapter kits are sold separately on Grainger.com.

31XC25

31XC15

Commercial Ice Machines, Bins, and Dispensers

- Top Hat: for small business or residential use, ⅞" x 1"
- Cubelet: soft, chewable, ideal for healthcare or food service, ⅝" x ½" x ⅜"
- Crescent: hard, clear, 1⅛" x 1½" x ½"
- Flake: for therapeutic use in hospitals
- Square: for gourmet beverages, 1" x 1" x 1"

Ice machines have a stainless steel finish to resist corrosion and to ease cleaning. ENERGY STAR qualified where noted. Repair parts are available on Grainger.com.

Ice Makers, Undercounter—Compact units for lower volume ice output. 31XC32, 31XC33, 31XC85, and 31XC86 are ideal for residential use. Models can be freestanding or built-in, and have a field-reversible door. Compatible with optional Drain Pump 31XD01, for use where a floor drain is not accessible. Other models are sized for coffee shops, small businesses or restaurants.

Ice Makers, Modular Heads, High Capacity—31XC76 produces a full square cube with minuscule dimple; cubes melt slowly making them ideal for gourmet beverages. All machine heads are for use with storage bins, sold separately.

Ice Dispenser, Ice Machine, Water Dispenser, Countertop—Feature the CleanCycle 12 system that purges the dispenser of impurities every 12 hr. Reliable resin-based gear motor for long life.

Ice Dispenser—Floor standing units have simple push-button dispensing.

Ice Dispenser, Water Dispenser—Countertop unit has an innovative auger agitator design that dispenses individual cubes, and model can dispense water.

Stationary Ice Storage Bins—Feature H-Guard Plus antimicrobial and a removable baffle to ease cleaning. 31XC23 and 31XC24 feature a universal top kit.

Ice Machines and Dispensers

Ice-O-Matic

- 115V, except 437L47 to 437L50 are 208/230V

36RF27 has a sanitary, touch-free dispenser. Lighted keypad and design allows you to fill large water pitchers. 36RF26 allows easy cleaning of the storage bin without moving the machine. Undercounter models have a large door at the front of the unit easing access to the ice. 36RF31 is a continuous-flow ice maker with non-refrigerated ice storage. Find more Ice-O-Matic products on Grainger.com.

Digital/Wireless App Manifolds

YELLOW JACKET

ManTooth gauges provide a wireless connection to your smart device so you can test without losing refrigerant (no hoses or manifolds required). Calculate and display pressure, temp., superheat and sub-cooling on your device. Screenshot feature lets you save and share readings. Rechargeable battery and USB cable included. 39DM72 includes a case. 48WE24 includes dual non-tethered pressure/temperature gauges, 2 wired temperature clamps, and 1 interchangeable vacuum gauge.

PARKER

Lightweight wireless sensors can sync with a smart device app so you can read and display a system's real-time pressure and temp., plus display superheat and sub-cooling without using hoses or manifold gauges. Case included.

TESTO

All include a large back-lit digital display, sight glass, and batteries. Included case, except for 39DM73.

39DM73—Includes 60 refrigerant profiles.

39DM72

45TY46
(Phone not included)

21C649—Internal vacuum sensor, data logging and printing capabilities, and a third probe port. Simultaneous superheat and sub-cool calculations and 40 refrigerant profiles (more are downloadable). Includes 2 NTC temp. clamps and USB cable.

Manifold Gauge Sets

Yellow Jacket—Manifolds offer 60" UL high-pressure hose sets. Aluminum 4-valve manifolds feature ⅜" vacuum port and exclusive 100 mesh filter within each flare fitting to keep out particulate material and extend seat life. All manifold bodies have lifetime manufacturer's warranty. Gauges offer 1% full scale accuracy and polycarbonate crystal cover to prevent face damage. 3⅛" gauges have Flutterless technology. Gauges are adaptable to other industry manifolds.

JB Industries—20HK13 and 36P061 feature full-flow design for faster evacuation and charging. 14X855 and 14X854 have internal metering ball valves for liquid charging; no liquid charging adapter required. Most have 3⅛" gauges with 3-refrigerant scales; 14X858 features 4" gauges with 4-refrigerant scales, Class 1. 35YX49 and 36P061 have secure seal fittings.

Imperial—Precision flutter- and pulsation-resistant gauges with protective boots. PolarShield high-pressure UL Recognized barrier hoses. 2-valve manifolds are brass; 3- and 4-valve manifolds are aluminum. 4-valve manifolds feature ⅜" vacuum port. 1YNU9 has integrated liquid low side charger.

Dayton—All units include 72" hose sets. 4PDF8, 4PDF7, and 4PDG1 use flutter-resistant dry gauges.

Charging and Evacuation Hoses

- Working pressure: 800 psi
- Burst pressure: 4000 psi

Dayton—Compatible with HCFC and HFC refrigerants, including R-410A.

JB Industries Kobra Kevlar—Hoses feature secure seal fittings and are for use with R-410A.

Imperial Kevlar-Lined PolarShield—Can be used with all blends of refrigerants. Adjustable brass core depressor to match valve core. 905 Series hoses have ¼" FFL connections with auto shut-off on 1 end. 6T370 and 6T371 have permanently attached straight Kwik-Coupler shut-off connector at 1 end of each hose. R-410A compatible.

Yellow Jacket PLUS II—Hoses feature double barrier protection and are compatible with all refrigerants, including R410A. Compact ball valves recommended for R410A; SealRight fittings feature low loss anti-blow back connection; standard ends offer an "Adjust-a-Valve" depressor.

Refrigerant Recovery Machines

UL CERTIFIED
To meet EPA Regulations per ARI 740
8EA7

Bacharach 2-Port—Powerful twin cylinder 1-HP oilless compressor, high/low pressure shut-off, and easy 1-knob operation. Integrated purge feature minimizes cross-contamination of refrigerants. Include in-line filter and connection hose. 31TP42 has 80% shutoff installed.

Dayton 2-Port—Oilless, air-cooled, direct-drive compressor easily switches between liquid and vapor recovery. Shut off when recovery is done.

Inficon Vortex Dual 2-Port—1 HP dual piston compressor and micro-channel condenser ensures sustained speed in high-temp. environments.

JB Industries—Powerful dual-piston compressor, simple 2-valve operation, and is self-purging without having to change hoses.

Robinair—Oilless compressor and lets you recover both vapor and liquid refrigerant. Simple 2-valve controls and auto, high-pressure shut down.

Yellow Jacket YJ-LTE—Easy-to-use purge circuit for clearing after each job. 1-valve and 1-gauge control panel.

Yellow Jacket RecoverXLT 2-Port—Oilless units offer single-valve control for easy changeover from liquid to vapor to purge. CPR valve regulates refrigerant to compressor; eliminates throttling the suction valve.

Vacuum Pumps

Have check valves, sight glass, and gas ballast valve. 115V, 60 Hz.

Bacharach—Compact, 2-stage, rotary vane pumps.

CPS Pro-Set—Lightweight and meets ANSI 12:12.01 Ignition Proof standards.

Dayton—Portable design; On/Off rocker switch.

JB Industries—2-stage, direct-drive pumps with low-profile On/Off rocker switch. 1AKD9 and 5UET2 have drain valves sealed with O-rings to prevent leaks.

Robinair—2-stage rotary vane design. 52VN81 has high CFM rating for fast evacuation. 52VN86 lets you shut off pump while connected to A/C system.

1RK23, Shown with Oil Caddy

Yellow Jacket SuperEvac—2-stage pumps pull a vacuum down to 15 microns. Built-in vacuum gauge, all-metal with steel handle, and intake filter screen.

Yellow Jacket Bullet—Has an intake filter screen.

Refrigerant Recovery Cylinders and Liquid Level Sensor

Powder-coated, reusable cylinders meet DOT Spec. 4BA and ARI guidelines. Dual-port valve for liquid or vapor. A refrigerant recovery scale or float sensor (sold separately) is required to avoid overfilling. Liquid Level Sensor 4LZH4 serves as a float switch.

Refrigerant Charging/Recovery Scales

Scales are electronic with 3 digital display modes: lb./oz., decimal lb., and kg. Case included.

5PWF7—¼" male flare and ½" ACME fittings. Holds 100 charge/recovery programs.

Wireless—Units track refrigerant transferred over multiple jobs and can support multiple users. 40KJ53 displays through your smartphone via a free app. 40KJ54 can operate without a smartphone via wireless handpiece with display.

10M819

Refrigerant Leak Detectors

Detect all halogenated refrigerants, except 5ZXH2 only detects CO_2 refrigerant.

Yellow Jacket—10M819 has flashing tip, UV lights, and Smart Alarm LED that shows the size of leak on a scale of 1 to 9.

Johnson Controls—Manual and automatic background adjustment.

Inficon—Automatic background adjustment, audible and visual alarms. 5ZXH2, 5ZXH1, and 3MMN3 include multiple LEDs and headphone jack.

Bacharach—3MMT2 has high or low sensitivity modes.

JB Industries—Allows you to detect all HFC, HCFC, and blended refrigerants, plus the new HFO refrigerants. 35YX37 has a peak function that stores the highest change in refrigerant concentration while continuing to detect leaks.

UEI Test Instruments—52AU29 has a digital numeric leak size indicator with 3 sensitivity levels and a visual LED leak alarm in a splash-resistant housing. 52WH43 can detect existing halogenated refrigerants and blends with 2 position sensitivity selector, plus audible and visual leak rate indicators. 52ND59 is NIST certified.

35LX63

Ultrasonic Leak Detectors

AccuTrak technology allows you to easily pinpoint pressure and vacuum leaks in air conditioning and refrigeration systems without changing tips or components. Detect any type of refrigerant or gas, even as small as 1.5 oz. per year of refrigerant, or hear a 5 psi leak up to 30 ft. away. Use the Touch Probe to hear internal ultrasound to quickly diagnose malfunctioning valves and bearings. Troubleshoot a TXV in just 5 min. Use the Sound Generator to artificially "sound pressurize" any enclosure or vessel to find leaks; ideal for refrigerator door seals. 3KXG7 can detect pressurized or vacuum leaks for any gas including nitrogen. The laser pointer helps you pinpoint leak location, even for far-away leaks.

20LR04

4LWX3

Data Loggers

Self-contained for temperature, except 4LWX3 monitors temperature and humidity. 20LR03 to 20LR05 have a real-time LCD and user selectable Stop on memory full, or rollover for continuous logging. Display alarm icon for high/low status and retain data if battery fails. All models include cables, software, and battery.

Description	Temp. Range (F)	Relative Humidity Range	Accuracy	Mfr. Model	Item No.
Miniature Data Logger, Humidity, Temperature	-40° to 158°F	0% to 99%	±1°F Temp, ±2% RH	SL300TH	**4LWX3**
Data Logger, Lithium Battery, Temperature	-5° to 160°F	—	±0.9°F (0.5°C)	SL500T	**20LR03**
Data Logger, Temperature	-5° to 160°F	—	±0.9°F (0.5°C)	SL500TC	**20LR05**
Data Logger, External Temperature	-5° to 160°F	—	±0.9°F (0.5°C)	SL500XT	**20LR04**

Leak Detection Kits and Accessories

Kits have fluorescent leak detection dyes that are free of co-solvents that can cause issues with air conditioning and refrigeration (AC/R) systems. The dye is injected into the system and allowed to circulate with the host fluid. An included UV lamp (except for 55NH58) is used to detect any fluorescent dye glow that indicates the presence of a refrigerant leak.

55NH67, 55NH69, and 55NH58—Have multi-dose dye cartridges where the injector is connected to the system's low-side service port and the injector's handle is turned to force the dye into the system. The cartridges have dosage marks that aid in dispensing the correct amount of fluorescent dye. Kits are for small- to medium-sized systems, except 55NH67 can dose up to 64 medium-sized systems or 32 large-sized systems.

55NH70—Has single-dose dye capsules that are injected by connecting between the low-pressure gauge of a charged manifold and the service port using two bleed valves. The dye is gradually added into the system along with refrigerant. For small- to medium-sized systems.

55NH67

Description	Brand	Mfr. Model	Item No.
Spectroline Leak Detection Kits			
BigEZ Fluorescent Dye Injector Kit includes: Violet light LED leak detection lamp, 4 oz (118 ml) BigEZ fluorescent dye cartridge, EZ-Ject dye injector assembly, 8 in. (20 cm) EZ-Ject hose assembly, Fluorescence-enhancing glasses, 2 oz (60 ml) GO-AWAY Plus dye cleaner, R-410a adapter/purge fitting.	Spectroline	SPE-HVLBEZE	**55NH67**
EZ-Ject Fluorescent Dye Injector Kit includes: Violet light LED leak detection lamp, (2) 0.5 oz (15 ml) universal/POE dye cartridges, EZ-Ject dye injector assembly, (1) 8 in (20 cm) EZ-Ject hose assembly, Fluorescence-enhancing glasses, 2 oz (60 ml) GLO-AWAY Plus dye cleaner, R-410a adapter/purge fitting.	Spectroline	SPE-HVLEZE	**55NH69**
EZ-Ject Fluorescent Dye Injection System. Multi-use kit ideal for small to medium size systems. Includes: (2) SPE-EZ5E 0.5 oz (15 ml) universal/POE dye cartridges, (1) EZ-Ject dye injector assembly, (1) 8 in (20 cm) EZ-Ject™ hose assembly, (1) adapter/purge fitting. Treats up to: 2 gallons (7.6 L) of lubricant, or 25 lbs (11.3 kg) of refrigerant, or 12 tons (42.2 kW) of cooling.	Spectroline	SPE-EZ100E-CS	**55NH58**
GLO-STICK Fluorescent Dye Injector Kit includes: Violet light LED leak detection lamp, (1) 0.5 oz (15 ml) universal/POE GLO-STICK dye capsule, (2) 0.5 oz (15 ml) universal/POE GLO-STICK dye capsules, (1) 0.5 oz (15 ml) universal/POE GLO-STICK dye capsule, (1) Bleed valve for attaching GLO-STICK capsule to service hose, 8 in. (20 cm) EZ-Ject hose assembly, Fluorescence-enhancing glasses, 2 oz (60 ml) GLO-AWAY Plus dye cleaner, R-410a adapter/purge fitting.	Spectroline	SPE-HVLGSE	**55NH70**
Parts and Accessories			
BigEZ Fluorescent Dye Cartridge, 4 oz (118 ml) universal/POE dye multi-use cartridge. Treats up to: 16 gallons (61 L) of lubricant, or 400 lbs (181 kg) of refrigerant, or 150 tons (527.5 kW) of cooling.	Spectroline	SPE-BEZ5E-4CS	**55NH57**
EZ-Ject Fluorescent Dye Cartridge, 0.5 oz (15 ml) multi-use universal/POE dye cartridge.	Spectroline	SPE-EZ5E-CS	**55NH59**
GLO-STICK 1E Fluorescent Dye Capsules, 0.5 oz (15 ml) universal/POE dye capsule. Treats up to: 15.1 oz to 1.6 qt (445 ml to 1.5 L) of lubricant, or to 4.9 lbs (1.4 to 2.2 kg) of refrigerant, or 2 tons (7 kW) of cooling.	Spectroline	SPE-GS1E-CS	**55NH63**
Glo-Stick 2E Fluorescent Dye Capsules, 0.5 oz (15 ml) universal/POE dye capsule. Treats up to: 1.7 to 3.2 qt (1.6 to 3.2 L) of lubricant, or 5 to 9.9 lbs (2.3 to 4.2 kg) of refrigerant, or 6 tons (21.1 kW) of cooling.	Spectroline	SPE-GS2E-CS	**55NH64**
GLO-STICK 3E Fluorescent Dye Capsules, 0.5 oz (15 ml) universal/POE dye capsule. Treats up to: 3.3 qt to 2 gal (3.1 to 7.6 L) of lubricant, or 10 to 25 lbs (4.6 to 11.3 kg) of refrigerant, or 12 tons (42.2 kW) of cooling.	Spectroline	SPE-GS3E-CS	**55NH65**
Inspection Flashlight with UV, laser and combination modes. 6 UV/Blue LEDs, 3 White LED Flashlight with 100,000 hr LED Life, Cordless, Includes Key Chain Carabiner	Fluke	RLD2	**5DJE7**
UV LED Leak Detection Flashlight is compact with a pre-focused lens creating a long-range inspection beam. For Universal/POE Dyes only. Includes fluorescence enhancing glasses and batteries.	Spectroline	SPE-HVL-CS	**55NH68**

Vacuum and Superheat/Subcooling Gauges

Supco—1TC70 features a color-coded LED readout and ¼" male flare connections. Includes hanger/stand, quick caps for fittings, and case. Digital models update every ½ sec. and feature ultrafine resolution, auto-off, and a built-in hanger. 4FY27 has 4½-digit LCD, thermistor sensor, and reads vacuum in: microns, psi, In Hg, millibars, pascals, Torr, or Millitorr of vacuum. Cleaning port for sensor cleaning and drying. 20LR01 is dual port with a backlit LCD. Unit has an audible and visual alarm when preset alarm thresholds are met.

JB Industries—35YX36 measures vacuum and can be remotely monitored via wireless Bluetooth and/or smartphone with free app. Program unit with a low/high limit alarm and it has data monitoring capabilities. Includes a power adapter and case. 5UET3 features programmable alarm, backlight, shutoff, and large LED screen. Factory calibrated. Includes AC adapter and case. 3TRC2 provides continuous read on LCD and saves last readout at shutdown. Leakproof design. ¼" swivel flare connection.

Yellow Jacket—9XHF8 automatically compensates for temp. and can display down to 10 microns in 7 different units. Sensor cord stretches to 24". Auto-Off. Replacement Vacuum Sensor 10M817 is sold separately.

Inficon—Pirani sensor for accurate measurements and replaceable filter to protect sensor. Reads from atmosphere to 1 micron. Quick calibration button; ¼" refrigerant flare fitting. Battery life: 45 hr.

Testo—Micron vacuum gauge with wireless Bluetooth communication to smartphone; 1 micron resolution; display data, create reports, and send via email or SMS.

Test Products International—Temperature compensated, 300 psi overpressure digital vacuum pressure gauge detects leaks created by vacuum, 7 units of measure.

UEI Test Instruments—Provides in-field calibration, analog bar graphs, easy sensor cleaning, and oil contamination sensors.

Portable Coil and Tube Cleaning Systems

SPEEDCLEAN GOODWAY®

These compact, easy-to-use cleaning systems save time and increase system efficiency. Models are designed to clean coils up to 8 inches thick, shell and tube condensers, and straight-tubed heat exchangers.

Portable Scale Removal Systems

GOODWAY® SPEEDCLEAN

Systems clean heat exchangers and other closed-loop systems to improve efficiency and extend the life of your equipment. Designed with acid-proof components, units safely contain chemicals to minimize fumes, splashes, and risk to operator safety. Hands-free models monitor pH levels and inject additional chemicals as needed.

Refrigeration Lubricants and Oils

22NV46

Emkarate RL Polyol Ester Lubricants—OEM approved, including Copeland approved RL32-3MAF. Designed for CFC, HCFC, and HFC applications; compatible with mineral oils, alkylbenzenes and PAGs.

Zerol Alkylbenzene Refrigeration Oil—Excellent miscibility and compatibility with all CFC and HCFC refrigerants. OEM recommended for HCFC-based service blends. Great for retrofitting with R401b, R402b, and R123. 22NV51 is Copeland approved.

A/C Re-New Lubricant Additive—Quiets noisy compressors, improves heat transfer, and reduces energy consumption.

Mineral Oil—Naphthenic oils are OEM recommended for use with CFCs and HCFCs, and approved by Copeland and Carlyle.

** Rated at 45°F evaporator, 130°F condenser, 95°F return, 115°F liquid, and 95°F ambient.*

Refrigeration Fittings and Repair Supplies

JB Industries—Access valves feature brass bodies and stainless steel/brass cores, and are machined according to ARI specifications. Tees are fully adjustable with extra-depth slip-fit braze cups; install anywhere along the line.

Parker

Liquid and Suction Line Filter Dryers

For use with all CFC, HCFC, and HFC refrigerants.

Copper—High moisture/acid capacity, solid core, and large flow capacity. 6X525 has grooved ends for easy breakoff to activate dryer. Compatible with mineral oils and polyolester oils (POEs).

Steel—Powder-coated shell withstands 500-hr. salt spray test. SAE flare fittings are nickel plated. Solder connections are 100% copper.

6X512 3A656

Refrigerant Pressure Controls

- SPST, except where noted

DUAL-PRESSURE CONTROLS

Combine high-pressure compressor protection with low-pressure, cycling, or safety functions.

For R-12, R-22, R-134A, and R-502.

Johnson Controls—Visible pressure scale. Adjustable through the range without removing cover. Manual reset models are trip-free. P170 models require armored capillary tubes; see Grainger.com.

SINGLE-PRESSURE CONTROLS

For R-12, R-22, R-134A, and R-502. Controls 40G337, 40G338, 40G344, 40G388, 40G389, 40G399, and 40G404 are compatible with R-410A.

Low Pressure—Protect compressors against loss of refrigerant. Also used to cycle compressors in commercial refrigeration applications.

High Pressure—Protect compressors from excessive system pressure.

NONADJUSTABLE PRESSURE SWITCHES

- Automatic reset, except where noted
- Bursting pressure: 5000 psi

Snap-acting sensor. ¼" female SAE connection. 24/120/240V. Switches 40G327, 40G323, 2HYV5, 2HYV6, and 2HYV7 are compatible with R-410A.

Water-Regulating Valves

- Max. water pressure: 150 psig (V146 models are 350 psig)
- Corrosion-resistant material

Direct-acting valves open on pressure increase to regulate the flow of water or glycol to water-cooled condenser refrigeration systems. Pressure-balanced, modulating valves provide precise control of head pressure on open or closed refrigeration systems. Valves can be repaired without removal or system pump-down. V47 models are temperature-activated.

Valves for High-Pressure Refrigerants—Require Armored Capillary Tube 40G423, sold separately this page.

Armored Capillaries

- For use with ¼" male flare fitting connectors

Armored capillaries minimize pressure pulsation. Brass armor sleeve improves resistance to abrasion caused by vibration.

Note: Compatible with all common noncorrosive refrigerants.

Oil Pressure Controls

- 120/240VAC
- Manual reset
- Built-in time delay relay

JOHNSON CONTROLS

For use with noncorrosive refrigerants.

P45 and P145 Series—Units are nonadjustable and provide dependable low-lube oil pressure; factory set per manufacturer's specs. P145 models require armored capillary tubes (see Grainger.com).

P28 and P128 Series—Provide dependable cut-out for pressure-lubricated refrigeration compressors. Field-adjustable pressure differential per manufacturer's specs. P128 models require armored capillary tubes (see Grainger.com).

P545 Series—Electronic controls lock out compressor if lube oil pressure falls below manufacturer's recommended net pressure. For use on refrigeration compressors equipped with oil pumps that accept single-point differential pressure switch. P400 sensor and wire harness included with controller.

RANCO

Replaceable time-delay modules, and adjustable pressure range.

For R-22, R-124, R-134A, R-408, R-502, and R-507.

Defrost Controls

Timers for Water Spray with Pump-Down Drain or Fan Delay Cycles—Defrost initiation: 1 to 8 cycles per day, at least 3 hr. between cycles. Delay or pump-down cycles: 0 to 30 min. in 3-min. increments; for stopping fans, reducing refrigerant pressure, or hot gas pump-down cycle. Defrost or fan cycles: 3 to 45 min. in 3-min. increments.

Time-Initiated and Time-Terminated—For electric heat, hot gas, or compressor shutdown defrost. Defrost/initiation cycles: 1 to 6 per day. Defrost cycles: 4 to 110 min. in 2-min. increments.

Time-Initiated, Remote-Temperature, or Pressure-Terminated—Work with external temperature or pressure sensor. Has 3 contact arrangements for electric heat, compressor shut-down, or hot gas defrost. Defrost cycles: 1 to 6 per day. Dial overlay changes defrost time from even- to odd-numbered hours. Backup defrost termination: 4 to 110 min. in 2-min. increments.

Time-Initiated, Pressure-Terminated—Modular pressure bellows. 3 contact arrangements for hot gas, electric heat, or compressor shutdown defrost. Defrost cycles: 1 to 6 per day, at least 4 hr. between cycles. Dial overlay changes defrost time from even- to odd-numbered hours. Backup defrost termination: 4 to 110 min. in 2-min. increments. Adjustable cut-in pressure-setting dial calibrated from 36 to 100 lb.

5X450

Time Initiated, and Time-, Pressure- and Temp.-Terminated, Auto Voltage—For commercial freezers and refrigerators. Defrost initiation in 15 min. cycles, up to 48 cycles per day. Compressor contacts 3HP, heater/fan contacts 2HP.

Universal Defrost Timers—Manual defrost can be initiated in 15-min. intervals. Provides 100 hr. of power loss protection.

Robertshaw®

Refrigeration Controls

3XL11 terminates defrost and delays the evaporator fan operation on electric heat, hot gas, and reverse cycle commercial refrigeration systems. 3XL05 and 3XL06 provide off-cycle defrost. Generally used in systems without hot gas or electric defrost.

Programmable Line-Voltage Thermostats

- Standard Programming: 7-Day
- Wireless Programming: 5-2, 7-Day

Standard models control the temperature of electric baseboard and fan-forced heaters. **Wireless** models wirelessly interact with heating systems and can be relocated without opening walls and running new wires.

Fan Coil Unit Thermostats

Low-Voltage models are for use with whole-building HVAC systems and typically run on 24VAC.

Line-Voltage are for HVAC systems that require direct electrical power and typically run on 120V or 240V.

3RCK7, 3RCK8, 3RCK9, and 278Y50 feature high/low-temp. limits and energy-saving mode with selectable heating or cooling setback points.

278Y50 is prewired to ease installation.

2NCA6 and 2NCA7 provide partial or full keypad lockout.

Remote Bulb Controls

Have a capillary tube and sensor that monitor and regulate the temperature of the ambient air at a distance away from the control.

1RC43 and 2E399—Temperature dial is graduated in both °F and °C. 2E399 has bimetallic sensor.

2NNT3 and 2NNT4—Have stainless steel housing and capillary components for corrosive environments.

4E912 and 4E919—Used with room air conditioners, packaged terminal air conditioners, and heat pumps.

2KGR3—Has gas-filled bulb and electroplated copper capillary tube. For large coils where air stratification could cause localized freezing.

4MY93—Has corrosion-resistant stainless capillary and sensor for agricultural applications.

Electronic Temperature Controls

- Digital display

Johnson Controls—A421 Series controls are single-stage, electronic temperature controls with SPDT output relay. The controls feature an adjustable backlit LCD for viewing the temperature and status of other functions, and a three-button touchpad for setup and adjustment. 35LY81 comes with factory-equipped power cord. 35LY80 and 35LY86 include Off-Cycle Defrost control with adjustable defrost cycle duration and frequency. 35LY79 and 35LY85 are freecooling, duty-cycle ventilation controls.

System 350 modular units provide On/Off and proportional temperature, humidity, and pressure control, and temperature reset.

System 450 digital modular units monitor and control temperature, humidity, and pressure simultaneously. Field-configurable out-of-the-box with Ethernet, Modbus, or Standalone communications options.

Honeywell—Vertically or horizontally mount the IP65 housing. Temperature Control 2GZN7 includes Remote Sensor 2GZP4.

- Throttling range: 1° to 150°F
- Thermistor sensor: 1097 ohms PTC at 77°F, ¼" dia. x 2"L
- NEMA enclosures have 9" leads

Ranco—Displays error codes. Keypad lockout, settings memory, and time delay on power up.

- Thermistor sensor: ¼" dia. x 4"L
- 0 to 10V output on 3ZP78, 3ZP80, 3ZP83, and 3ZP85

KMC FLEXSTAT BACNET CONTROLLERS

- 64 x 128 dot matrix LCD
- 24VAC
- Wire clamp 14-22 AWG connection
- Wall mount

Built-in program library can be customized with site-specific and application-specific requirements. Connect to any system using the ASHRAE BACnet communication protocol. UL Listed.

KMC TEMPERATURE SENSORS

Type 2 and type 3 10k ohm resistors.

SIEMENS

Installed sensors provide accurate environmental measurements to Siemens and other HVAC control systems.

JOHNSON CONTROLS

Temperature sensors provide economical solutions for a wide variety of temperature sensing needs. The Humidity All-Polymer sensor construction provides improved resistance to chemical corrosion. Innovative TrueRH circuitry and calibration process for True±2 or 3% humidity sensing accuracy and reliability. Carbon dioxide sensors include an innovative CARBOCAP sensor, with its single-beam, dual-wavelength design, for superior performance compared to other technologies.

HONEYWELL PNEUMATIC THERMOSTAT

This direct-wired pneumatic thermostat has a temperature sensor and a user-selectable temperature setpoint in Fahrenheit, Celsius, and Relative (+ to -).

Duct Smoke or Carbon Monoxide Detectors

AIR PRODUCTS AND CONTROLS You're in Control

- Detectors are 24VDC, 24VAC, 120VAC & 230VAC

Smoke Detectors—Suitable for high temperature applications and feature an internal dust filtering system that requires no additional screens or filters to clean. Models are universal voltage and you can interconnect up to 30 units. 45JU29 has an innovative, toolless design that allows for quick installation and eases the loading and unloading of sampling/exhaust tubes. 45JU40 is designed for no- or low-flow special applications and plenum spaces. 45JU42 is weathertight, corrosion resistant, and has a NEMA 4X rating.

Carbon Monoxide Detector—Unit can initiate an air handling unit shutdown when the CO concentration reaches a level considered hazardous by NFPA and OSHA standards.

Accessories—45JU30 features lightweight, sectional tubes that you can connect together for the required length. 45JU57 and 45JU35 feature a multicolor LED to indicate Alarm, Pilot, and Trouble status. 45JU57 is mounted in a white, single-gang cover plate. 45JU35 is mounted in a white, double-gang plate with a sounder strobe assembly with a clear lens.

Duct Smoke Detectors

SYSTEM SENSOR

- Detectors are 24VDC and 120VAC, except 2GWK9 and 5CGZ1 are also 24VAC

Feature 4-wire photoelectric integrated low air flow technology and versatile square or rectangular mounting. 415F91 has an integrated smoke test port and the sampling tube is durable corrosion-resistant steel. Innovative tube allows easy, toolless installation from the front or back of the detector.

Duct Smoke Detectors

Edwards Signaling

Systems continuously sample air flow within the HVAC duct and alert of combustion activity within the duct to help prevent smoke from circulating throughout the duct system.

FOR 4-WIRE SMOKE DETECTOR SYSTEMS

Base Controller and Sensor with RJ45 Connections 1EYB5—Duct smoke detector comes with a Detector Assembly and a Controller in separate housings to ease access to either the detector or controller without disturbing the other device. Detector Assembly has a standard RJ45 modular interconnection and a standard sampling tube with mounting holes. Controller can be interconnected to up to 15 controllers and a single controller can accommodate up to 2 detector assemblies. They also have standard connections to ease coupling to other compatible detectors.

Base Controller 16X427 and Sensor 16X434—Allow connectivity via an RJ45 connection for a complete duct smoke detector system.

Base Controller 16X428 and Sensor 16X435—Models allow connectivity via a wire terminal for a complete duct smoke detector system.

FOR 2-WIRE SMOKE DETECTOR SYSTEMS

Base System with Integrated Sensor 16X425—Unit includes a Smoke Sensor with differential sensing for reliable and stable sensitivity. Detector Assembly has a sampling tube that can be installed with or without the cover in place and can be rotated in 45° increments.

Boiler Controls

Indoor Strap-On—Provide control without tapping boiler or draining system. Mounting strap provides any-position mounting without leveling on a 2"- to 6"-dia. pipe.

Beckett—Features include backlit display touch pad for programming temperature limits and differentials, memory storage, and diagnostics for troubleshooting.

				ICM494	**32MY20** *

** Replacement board only for 32MY19.*

Plug-In 3-Phase Line Voltage Monitor

Protects 3-phase motors and equipment from voltage faults. LED indicates high/low/unbalanced voltage, phase loss/reversal, and power interruptions. 100-msec response time. 50/60 Hz.

6JYL2

Voltage	% Volts Unbalance	N.O. Output (A)	NC Output (A)	Mfr. Model	Item No.

Head-Pressure Controls

ICM—Feature high-temp. bypass, heat pump override, and adjustable hard-start timing and motor cutout speed. Indicator lights for full or modulated motor voltage. 4MG74 and 5KPX8 require separate 24VAC source; 4MG75 and 4MG76 have built-in 24VAC transformer.

Johnson Controls— R410A compatible. Weather-resistant, durable motor speed controls for approved single-phase, PSC motors commonly used in many refrigeration and air conditioning condenser fan applications. 20XJ08 allows easy configuration of P266 Series controllers via a PC.

Bypass Timer

- Universal input voltage: 18-240VAC, 1A, 10A inrush

Bypasses a low-pressure switch or an oil-pressure switch on startup.

Time Delay	Mfr. Model	Item No.
10-1000 Seconds	ICM175	**3UW85**

3-Phase Line Voltage Monitors

- UL Recognized E60605

Can detect voltage imbalance, high/low voltage, phase loss, reversal, incorrect sequencing, and rapid short cycling. **3UW93** has programmable 25-fault memory storage. Independent high/low voltage settings.

3UW93

Surge Protectors/Arrestors

- 1-phase, 120-240V
- Meet UL standards

Protect air conditioners, generators, motors, and appliances from power surges and lightning. 32ZN47 has an LED showing that surge protection is present, and a second LED indicating that device has power and is properly grounded.

32MY23

Refrigeration and Air Conditioner Start Assist Kits

32ZN44 to 32ZN46 can reduce air conditioner compressor start-up time up to 50% and lower energy consumption. 4E239 to 4E241 are for residential and commercial air conditioning units, heat pumps, and room air conditioners. 4MG78 replaces 3-wire potential relay and capacitor. 4E238 is used with residential and commercial refrigerators and freezers. 20LP97 to 20LP99 allow OEM-style, 3-wire installation and are for single-phase air conditioner or refrigeration units and hard-starting compressors under low voltage conditions.

*** NG only.**

Universal System Controls

- ¼" quick-connect
- Gas type: LP/NG

3XA74 is universal for comparative silicon carbide modules. Features interchangeable program keys. 1RZZ2 is for single- and dual-rod remote sense applications.

Note: For more information on included components and features, go to Grainger.com®.

48KT46

Intermittent Pilot Ignition Systems and Conversion Kits

Conversion Kit

Convert conventional standing pilot systems to intermittent pilot systems. 1TGE4 is 100% shutoff with 90-sec. max. ignition trial; continuous retry. 4E396 has no max. lockout time with continuous trial for ignition and is not 100% shutoff. 4E397 has 60-sec. max. lockout time, and shutoff is 100% after 3 trials for ignition.

Note: For kit contents, go to Grainger.com®.

Honeywell Home White-Rodgers Supco Johnson Controls

Plenum-Mount Fan and Limit Controls

FAN AND LIMIT

Single-element fan and limit combination fits applications with narrow space limitations.

Honeywell—UL Listed.

White Rodgers—UL Recognized and CSA Certified.

LIMIT

- Pilot-duty rated
- Resistive amps: 15 at 120V, 10 at 240V
- Inductive amps: 3 at 120V, 1.5 at 240V
- Voltage: 120/240/480

UL Listed and CSA Certified.

WARM AIR

- Max. element temp.: 300°F
- Pilot duty: 125VA at 24 to 600VAC
- Inductive amps: 16 at 120V, 8 at 240V

Features adjustable dial stop and trip-free reset lever. UL Listed.

Pilot and Ignition Components

Items are LP/NG except where noted.

5AU59 is ¼"-dia. aluminum tubing; includes compression nut, ball sleeves, and breakaway ferrule.

12Z418 includes PG9 pilot adapter.

2E446 has 36" armored cable leads with split-spade terminals. Includes mounting nut, spring clips, and PG9 adapter sleeve.

2EWF9 and 2EWF8 have low-mass, quick-dropout thermocouples.

Potential Relays

4MG77

Use to start 1-phase, capacitor-type motors in air conditioning and refrigeration applications.

Supco—Replaces most potential relays with 130 to 270V pickup. Contacts will open after 1 to 1.5 sec. if the motor does not start.

ICM—Differential voltage-sensing, universal motor-starting relay. Rated 50 amps @ 110 to 270V, 50/60 Hz. No user adjustments or sizing required.

Magnetic and Transformer Combination Relays

18F255

Snap-acting for remote control of air conditioning, heating, and ventilation systems, motors (up to 1½ HP), tools, and other electrical devices within ratings.

MAGNETIC

AC Switching—SPST models have combination screw/push-on terminals and permanent jumper to load (except where noted). DPST models have screw-type line and load terminals.

Enclosed Fan (Heavy Duty)—¼" spade terminals.

SureSwitch Relay—Microprocessor-controlled switching algorithms reduce arcing, virtually eliminating contact pitting and welding.

TRANSFORMER COMBINATIONS

120V primary, except 2E346 is 240V and features conduit hub or screw mounting.

Time-Delay Relays

Feature control knob for adjustable time range. 0.25" quick-connect terminals. 1-hole mounting.

4E233 and 4E234—Universal input voltage operation of 18 to 240VAC/VDC. 2-wire hookup. For compressor protection and staging.

4E235—Prevents compressor startup due to low line voltage/power failure. Input voltage: 18 to 30VAC.

4E890—Provides an Off delay to allow fan to continue running in forced air systems. 18 to 30VAC.

Ignition Transformers, Burner Ignitors, and Burner Controls

Beckett · Honeywell Home · Allanson Environmental Electrics · ICM Controls

6HMJ3—Universally compatible controller has field-adjustable valve-on delay and 2-line diagnostic LCD. EnviraCom communication-ready.

3AAD7—Features limited recycle and reset, valve-on delay, welded relay protection, 3 status lights, and 24VAC terminals. Use with GeniSys Display 3AAD8 as a universal programming/diagnostic controller.

2E865—Combination primary and hydronic control with solid state control circuit and external low-voltage terminals. It has circulator control and includes well adapter and heat-conductive compound.

23M547—Universal replacement ignitor mounts onto any previously installed ignitor mounting plates; eliminates the need for extra mounting plates.

- 120V primary, 17.5kV peak secondary, 50/60Hz, 45mA

High-Efficiency Oil Burners

Beckett

- 120V
- 15-sec. prepurge
- Use with No. 1 or No. 2 heating oil (ASTM D396) only
- Nozzles not included

Feature 1/7-HP PSC motor with automatic reset overload protection, 3450 rpm, and adjustable mounting flange. Each includes low-fire baffle, assorted heads, static plates, integrated solenoid valve, electronic oil ignitor, and single-stage pump. For air tube combinations, nozzles, and accessories, go to Grainger.com and search for Beckett.

- Max. water temp.: 220°F
- Snap-in connectors on power and end switch

Zone Sentry valves can be used in applications including 15 psi geothermal steam, heating systems, or in chilled water where condensation is present. The actuator can be replaced in seconds. Ball valve design installs in any orientation. Valves feature quick-connect wiring, multi-function LED, manual override, and end switch.

High-Capacity Thermostatic Radiator Actuators and Valves

Provide precise, automatic control of room temperature in 2-pipe systems.

Actuators—Continually monitor and adjust room temperature.

Valves—Threaded tailpiece. Parts are replaceable on in-service, in-line valves under pressure.

Programmable Radiator Controller—Energy-saving unit fits most standard radiator valves.

Steam Traps

Control steam and condensate movement to maximize removal of latent heat from steam for efficient system operation. Stainless steel internal components.

Float and Thermostatic—Traps meet Mil. Spec. WW-T-696-E Type VI, Class 1-5, except 402W71.

Inverted Bucket—Inlet and outlet pipe connections are on the same level. Removable covers have valve linkage and seat attached. Meet Mil. Spec. WW-T-696-E Type I, Style B, Class 1-7, except items with Mfr. Model number having a B0 prefix and 402W85.

Thermodynamic—Compact traps handle water hammer and superheat; install easily in any position. Audible discharge makes checking operation simple. For use in kettles, steam main drips, and steam tracing.

Thermostatic—Balanced-pressure stainless steel thermostatic element automatically adjusts to varying pressures. Meet Mil. Spec. A-A-60001 Type V, Style A, Class 1 and 2, except 402W98.

Spence

Pilot Regulators

Pressure pilot springs are interchangeable. Feature stainless steel components and a removable strainer. Max. operating pressure: 250 psi.

Pressure Adjustment Range	Pilot Valve Spring Color	Mfr. Model	Item No.
2 to 30 psi	Blue	SPS-30	4NU80
5 to 60 psi	Red	SPS-60	4NU81
20 to 175 psi	Gold	SPS-175	4NU82

4NU84

"Y" Strainers

Bell & Gossett a xylem brand

Remove harmful pipeline debris to safeguard valves and pumps. Screen size: 20. Rated for 400 psi water. Steam pressure: cast iron 250 psi, cast brass 300 psi.

Connec. Type	Housing Material	Mfr. Model	Item No.
FNPT x FNPT	Cast Iron	415C - ½"	4NU84

		420C - ¾"	4NU91
		420C - 1"	4NU92

Vacuum Breaker

Bell & Gossett a xylem brand

Improves condensate removal and prevents poor equipment performance. Adjustable from ¼" to 20" Hg vacuum. Rated for 150 psi. Max. temp.: 366°F.

Size	Connection Type	Material of Construction	Mfr. Model	Item No.
¾ in	MNPT	Brass	62	4NU79

Universal Electronic Water Level Controllers

Waterline Controls®

4GHK3

- NEMA 4X enclosure
- Enclosure is 8¾"H x 10½"W x 6"D

Provide precise control that compensates for wave action and manages water levels to within ⅛" of operating range. Sensor rods will not plate foul or deteriorate, no matter the water quality. Digital circuitry easily integrates with existing building automation systems. Modular, quick-connect design. Control panel has water level and fault indicators and diagnostic self-test button. 15-yr. duty cycle. For cooling towers, water and stormwater holding and storage tanks, irrigation lakes, and sewage water systems. Each includes 20"L x 3" dia. PVC pipe containing ¼" stainless steel probes, 50-ft. sensor wire, mounting bracket, and U-bolts.

Pneumatic Switches, Transducers, Relays, and Valves

Pneumatic Switches—Feature electric pneumatic relays rated at 120V.

Pressure Control—Low pressure control is designed for applications in which a pneumatic air signal is used to operate an electric or electronic device. Applications include pressure-electric switches in pneumatic systems, control of pumps or small air compressors, and pressure-electric interlock of fluid flow systems.

Relays—Perform various functions in a control loop.

Solenoid Air Valves—Commonly used to alternately apply pressure to and exhaust pressure from pneumatically controlled devices.

KMC Controls | Johnson Controls | Honeywell | SIEMENS

Pneumatic Damper Actuators

Proportional control of dampers in either independent or sequence operation.

KMC models are for use on VAV terminals, small dampers, and valves. 3/16" fitting for 1/4" tubing, 1/2" mounting hole diameter. Operating temperature limit: -20° to 180°F.

Honeywell 3UC22 to 3UC24 have no bracket or ball joint, and are for direct replacement.

Siemens/Powers Controls - most models have pivot mounting.

Johnson Controls models respond to a pneumatic controller or electro-pneumatic transducer.

Pneumatic Receiver-Controllers and Modular Controllers

Johnson Controls—38Y191 directly controls dampers, valves, and other devices in a pneumatic transmission system from a remote transmitter. 20RG02 is a pressure independent submaster device for regulating air flow in VAV boxes. 20RG03 controls the output volume in response to a reset signal from a thermostat or other master controller.

KMC—For use with pressure switches, receiver gauges, relays, and temperature transmitters to control valves and actuators, including low-limit applications.

Siemens—Use to control temperature, humidity, and pressure of mechanical equipment in commercial buildings. Feature internal restrictors for transmitter inputs and plug-in air connectors. Setpoint can be reset.

Honeywell—
Use with remote sensors to provide proportional (P) or proportional plus integral (P+I) control of temperature, humidity, pressure, or dew point.

Pneumatic Solenoid Air Valves

- 3-way

Series V11 models can be mounted in any position and are for use in applications where the operation of a pneumatically-operated device is dependent upon an electrical circuit.

4DDZ2

Variable Air Volume (VAV) Controller Submasters and Sensors

SUBMASTERS

- Main air pressure: 15 to 30 psig
- Output sensitivity: 5 psi/0.02" WC
- Setpoint range min.: 0" WC
- Adjustable min./max. velocity limits
- Push-on fittings for ¼" O.D. tubing
- Mounting bracket included

CSC-2000 Series—Designed for use on VAV terminal units in HVAC systems. 4DDZ2 has a 0 to 10 molded plastic reference dial.

CSC-3000 Series—Universal replacement for more than 85% of OEM-supplied direct- and reverse-acting pneumatic VAV volume-reset controllers shipped since 1980. Reset start point factory set at 8 psig for 4DDZ8 and 4DDZ9; 3 psig for 4DEA1; and 10 psig for 4DEA2.

DIFFERENTIAL PRESSURE FLOW SENSORS

- ½" exterior length
- ¼" push-on nipple

For use with VAV controllers and ⅜" O.D. polyethylene tubing. Easily installed through ⅞" dia. hole in duct.

2½" to 6" Pneumatic and Electric Actuated Globe Valves

Johnson Controls

Cast iron flanged globe valves feature brass trim, and are designed primarily to regulate the flow of water and steam in response to the demand of a controller in HVAC systems.

For additional information on actuators, go to Grainger.com®.

Honeywell Honeywell Home

Electric Globe Valves

2- and 3-Way, Cartridge Cage—Actuator can be removed without draining system. For use with floating actuators, sold separately. No tools required for actuator installation or removal. Service is by replacement of cartridge, not valve body. 2-way bodies can be plumbed in either direction. 3-way bodies can be used in diverting or mixing applications.

2- and 3-Way, Cartridge—Long stroke allows wider range of control. Soft valve seat provides low leakage rate. Threaded plastic cover with handle for manual operation. Easily installed in areas where space is limited.

2-Way, Direct Acting—Provide equal percentage characteristics of flow for close control of water, and linear characteristics of flow for close control of steam.

Details on page A1.

Fluid Flow Switches

- SPDT
- 24-230V, except 35LZ20 is 4-120V
- Max. fluid temperature: 250°F
- Max. pressure: 290 psi
- Wetted materials: Viton

For fluid lines carrying ethylene glycol, water, or other nonhazardous liquids.

Standard Flow— For use with 1" or greater pipe size. 35LZ20 is a low-energy switch with gold-plated contacts for improved electrical performance in low-voltage, low-current circuits (dry circuits) to switch low-energy resistive loads, such as control signals.

Low Flow— For use with 1" or smaller pipe size.

Min. Flow Rate (gpm)	Max. Flow (gpm)	Switch Encl.	Connec. Size (in.)	Mfr. Model	Item No.
Standard Flow					
2.5 gpm	760 gpm	NEMA 3R	1 MNPT	F261KAH-V01C	**35LZ18**

			¾ FNPT x ¾ FNPT	F261MFH-V01C	**35LZ16**

Air Flow Switch

- SPDT
- Max. air velocity: 2000 fpm
- Max. ambient temp.: 104ºF

Detects duct air flow (or absence) by velocity of air movement. Features trimmable 1-pc. stainless steel paddle and range-adjusting screw for field adjustment. Gasket included.

Paddle Size	Full Load Amps @ 115/230V	Min. Actuation Velocity Horizontal	Min. Actuation Velocity Vertical	Mfr. Model	Item No.
2⅛" x 6⅞"	16.0/8.0	500 fpm (> 50 sq in duct area)	750 fpm (> 50 sq in duct area)	F262KDH-01C	**35LY69**

2AGD4

Air Pressure Controls

Low-Pressure Transducers— Measure static and differential pressure of clean, dry, noncorrosive gases in HVAC ducts and other applications. LED power status indicator. Detachable terminal block simplifies wiring. NEMA 1 ABS housing has ¼" barbed male fittings. Proof pressure 15 psi, burst pressure 25 psi.

- Accuracy: 0.8% full scale
- 4 to 20mA output

Pressure-Sensing Switches and Probes

PRESSURE-SENSING SWITCHES

- Mount with diaphragm in vertical plane

Sense positive, negative, or differential air pressure. Negative pressure rating same as positive.

HVAC OEM and HVAC General Purpose— For residential, light commercial mid-efficiency furnaces, and direct digital control (DDC) applications. 2E462 includes ferrules, one 12" length of ¼" O.D. flexible tubing, and ¼" O.D. tubing nuts.

Gold Contact— For computer environments, direct digital control, or where low-ampere currents are wired.

STATIC AND TOTAL PRESSURE PROBES

Static Pressure— Passive probes sense pressure as air flow aspirates across the probe tip opening.

Total Pressure— Impact probes sense negative or positive pressure, depending on the angle of the probe tip opening.

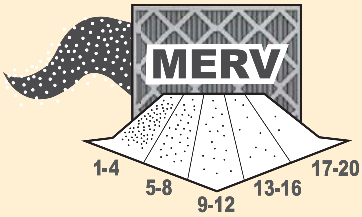
Performance Ratings

Use MERV ratings to select the right filter



What MERV ratings mean

An air filter's minimum efficiency reporting value (MERV) rating measures how effectively the filter stops dust and other contaminants from passing through the filter and into the air stream. Filters with higher MERV ratings trap small particles more effectively than filters with lower MERV ratings.

MERV Rating 1-4	MERV Rating 5-8	MERV Rating 9-12	MERV Rating 13-16	MERV Rating 17-20
Pollen Dust Mites Sanding Dust Textile/Carpet Fibers	Mold/Spores Dust Lint Cement Dust	Legionella Lead Dust Humidifier Dust Coal Dust Nebulizer Dust	Bacteria Tobacco Smoke Auto Fumes Sneeze Nuclei Insecticide Dust Copier Toner Pet Dander Face Powder	Virus Carriers Carbon Dust Sea Salt Combustion Smoke Radon Progeny Odor Microscopic Allergens

Application: • Residential Buildings • Window Air-Conditioning Units	**Application:** • Residential Buildings (better performance) • Commercial Buildings • Industrial Workplaces • Paint Booth Inlets	**Application:** • Residential Buildings (superior performance) • Commercial Buildings (better performance) • Hospital Laboratories	**Application:** • Commercial Buildings (superior performance) • General Surgery Rooms • Hospital Inpatient Care Rooms • Smoking Lounges	**Application:** • Pharmaceutical Manufacturing Facilities • Clean Rooms • Orthopedic Surgery Rooms

Air Handler®

General Purpose Pleated Air Filters

- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Capture airborne contaminants more effectively than nonpleated air filters since the pleated filter media has more surface area for trapping contaminants than nonpleated media.

Go to **grainger.com/autoreorder** to set up an ordering schedule.

Note: We carry MERV 13 air filters on Grainger.com.

STANDARD-CAPACITY

Improve air quality and keep resistance within reasonable operating limits.

HIGH-CAPACITY

50% more surface area than standard capacity extends service life by 30% to 50%, providing reduced resistance and lower energy and maintenance costs.

Air Handler®

LEED Green-Building-Compliant Pleated Air Filters

- MERV 13
- Standard capacity, except where noted
- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Meet the air-filtration efficiency criteria required for earning points toward LEED (Leadership in Energy and Environmental Design) Green Building certification. Slim format allows upgrades from medium-efficiency pleated filtration without investing in new equipment.

Air Handler®

Allergen Reduction Pleated Air Filters

- MERV 12
- Standard capacity
- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Electrostatically enhanced to attract even the smallest particles from the air, including microbes, pet dander, mold, and bacteria.

Nom. H	Nom. W	Nom. D	Case Qty.	Item No.

Air Handler®

High Strength Performance Pleat™ Air Filters

- MERV 8
- High capacity
- Low-resistance synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Extremely strong and durable under difficult operating conditions, including high-moisture applications. Can hold more dust than MERV 8 general use pleated air filters, so they need to be replaced less often. Manufactured with a heavy-duty, galvanized expanded metal support grid and moisture-resistant adhesive.

Air Handler®

High Strength Diamond Pleated Air Filters

- High capacity
- Low-resistance synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Have an internal wire frame that reinforces the filter to prevent it from blowing out in applications where the HVAC system may place increased pressure on the filter due to high velocities or high moisture.

Note: The filter media color may be white or yellow.

AirHandler® Antimicrobial Pleated Air Filters

- MERV 8
- High capacity
- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified

Treated with an antimicrobial agent that prevents mold and mildew from growing on the air filter. Ideal for commercial buildings, healthcare facilities, and locations where moisture is present and mold or mildew may grow on standard filters.

AirHandler® Odor Removal Panel Air Filters

- Moisture-resistant die-cut beverage board frame
- ASHRAE compliant

Activated charcoal absorbs unpleasant odors and other gaseous contaminants in the air stream to improve indoor air quality.

For Nuisance Odors, Pleated, Impregnated Carbon—Ideal for removing nuisance odors such as pet smells, tobacco smoke, food odors, and mustiness from the air.

- Carbon concentration: 20 g/sq. ft.

Air Handler®

Ring Panel and Link Air Filters

- MERV 8
- Synthetic media
- UL Classified

Consist of layered polyester filter media with a metal wire that is heat-sealed around the inside edges to hold the media open. The filter media wraps around the wire to ensure a positive seal when the filter is installed so that air doesn't bypass the filter. Unlike standard panel air filters they don't require clips or latches to seal them in place. Suitable for high moisture or high air flow applications and commonly used in commercial buildings, schools, universities, and areas where surface finishing is performed.

Air Handler®

Washable Grease Collection Baffle Air Filters

- Self-draining; handles included
- UL Classified

Metal air filters are washable, reusable, and have a metal frame and metal mesh filter media. They're installed in self-draining style commercial kitchen hoods to trap airborne grease before it reaches the exhaust fan, and to prevent grease from accumulating on the fan and the exterior building surface where the fan vents. Permanent filters balance airflow evenly throughout exhaust hoods in commercial kitchen applications and can be used to replace mesh filters in older hoods.

Washable Mesh Air Filters

- UL Classified

General use mesh filters have a metal frame, metal mesh filter media, and prevent large airborne particles such as dust, leaves, and pests from entering and damaging HVAC equipment. They can be vacuumed, sprayed, or run through a dishwasher for cleaning and reused. Optional handles attach to filter. Air filters are suitable for use with Carrier, MicroMetl, Trane, York, and other systems.

2GGR5

Aluminum—Rustproof; constructed of multiple layers of corrugated aluminum wire mesh in a heavy-gauge aluminum U-channel frame.

Galvanized Steel—Constructed of multiple layers of expanded corrugated steel mesh and a galvanized steel frame. Not recommended for outdoor applications.

AirHandler®

Cube Air Filters

- MERV 8
- Synthetic media
- UL Classified

These bag-like filters hold more particles than non-pleated panel and ring panel air filters and have layered synthetic filter media that won't deteriorate or warp in wet or humid conditions. Three-ply cube air filters have three layers of blue/white synthetic filter media that are heat-sealed together and are tacky to the touch. Ideal for replacing older cube-style air filters or basket-type filters in HVAC equipment. Filters are good for low-efficiency air filtration in paint booths, mining sites, and other areas with heavy dust or high humidity.

AirHandler®

Pocket Air Filters

- UL Classified

Pocket air filters, also called bag filters, have a bag-like filter element that is stitched into pockets. They trap more particles than nonpleated panel filters and need to be changed less often. Pocket dividers with reinforced media-support backing add to overall strength. Filters are best suited for applications where air is constantly flowing through the filter since they may deposit some captured material back into the air stream when they deflate. 13⁄16", 24-ga. galvanized steel frame. Often installed in HVAC systems in auto shops, data centers, food and beverage plants, industrial sites, and schools.

6B626

SYNTHETIC MEDIA

Does not shed fibers and suitable for high-humidity applications.

FIBERGLASS MEDIA

Ultrafine fiberglass media specifically designed for each efficiency range.

AirHandler® Rigid Cell Air Filters

- Ultrafine fiberglass or synthetic media, nylon-reinforced on the air-exit side
- Reinforced galvanized-steel frame
- Replace conventional pocket and rigid filters
- UL Classified

5W915

The filters' rigid frame can withstand fluctuations in airflow, making them ideal for variable-volume HVAC systems. Metal grid and media stabilizers maintain pleat configuration. Filters are for use in commercial buildings, schools, hospitals, arenas, and industrial installations.

- UL Classified
- Plastic frame
- Operate in 100% relative humidity
- Recommended final resistance: 1.5 WC
- For variable air volume systems
- Fit all commonly used 12"D filter frames and housings; 13/16" header

These filters trap particles with high efficiency and can hold more dust than standard minipleat, cartridge, and rigid cell air filters. The filter installation position, service side, and course of air flow can be in any direction. Filters with 85% Filter Efficiency are used for telecommunication industry ventilation.

2 Vs—Provide efficient filtration, are lightweight and easy to transport.

- Replace pocket and rigid filters
- For normal, hostile, and high humidity environments

3 Vs and 4 Vs, Hospital Grade—Can be used where HEPA filter performance is desired but system limitations do not permit use of high-resistance, low-volume HEPA filters.

- More than 8 times as efficient as a 95% ASHRAE filter

4 Vs, Heavy-Duty Plastic Frame—Additional urethane sealant provides greater strength for high-velocity and high-turbulence applications.

Air Handler®

Odor Removal Box Air Filters

19RR55

- ASTM compliant

Have a rigid frame and contain active carbon charcoal that absorbs unpleasant odors and other gaseous contaminants in the air stream to improve indoor air quality.

Rigid Cell—Can withstand fluctuations in airflow, making these filters ideal for variable-volume HVAC systems. These vapor phase adsorber filters remove molecular contaminants such as hydrocarbons, formaldehyde, ammonia, acid gases, VOCs (volatile organic compounds, such as paint and cleaning chemical fumes), and ozone from the air stream at low concentration levels. Used to improve indoor air quality in commercial or industrial applications such as museums, archive storage facilities, and semiconductor fabrication facilities.

- Metal frame
- Carbon concentration: 46 g/sq.ft.

2GGV7

V-Bank, 4 Vs—These active carbon charcoal adsorber filters are installed in HVAC systems to remove gaseous contaminants such as sulfur oxide, nitrous oxide, ammonia, amines, diesel fumes, aldehydes, acid gases, VOCs (volatile organic compounds, such as paint and cleaning chemical fumes), and animal odors from the air stream. Used to improve indoor air quality in airports, blueprint facilities, food processing plants, loading docks, museums, office buildings, and research facilities.

- Plastic frame
- Carbon concentration: 0.49 g/mL

Air Handler®

Air Filter Gasketing

Chemical-resistant gasketing with adhesive backing creates a compression seal between the filter media and the housing or frame it sits in. This helps prevent dirty air from escaping through the space between the filter media and the frame or housing. Gasketing is commonly used with box air filters.

Actual Width	Actual Thickness	Overall Length	Gasket Color	Item No.

13/16 in	¼ in	50 ft	Black	**6C524**

High Efficiency Particulate Air (HEPA) Filters

HEPA air filters are installed in HVAC systems to remove the maximum amount of contaminants from the air stream for applications that require very clean air. This maximizes indoor air quality and keeps the contaminants from building up in the equipment and damaging it. They provide more effective filtration than other styles of air filters and have a box construction. Commonly used in areas that require very high levels of contamination control, such as clean rooms, hospitals, pharmaceutical facilities, data centers, laboratories, and food processing plants.

Air Handler®

HEPA Air Filters

- Microglass media
- UL Classified

Dispersed Oil Particulates (DOP) HEPA-Grade, 95.00% Efficient—Capture airborne contaminants more efficiently than standard non-HEPA air filters but are less efficient than other types of HEPA air filters. Urethane sealant provides a positive seal on all four sides of the metal frame to help eliminate potential air leaks. Filters are suitable for applications where HEPA-filtered air is not required. Using the DOP test method, these filters are rated as removing particles as small as 0.30 microns with 95% efficiency.
- Hospital grade

Standard HEPA—Remove between 99.97% and 99.99% of particles as small as 0.30 microns from the air stream. Urethane sealant provides a positive seal on all four sides of the metal frame to help eliminate potential air leaks. Filters are commonly used in hospitals, operating rooms, patient isolation rooms, pharmaceutical processing facilities, and similar locations that must meet strict air cleanliness standards. The air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Hospital grade

HEPA Panel, 99.99% Efficient—For use in pressurized open plenum T-Bar grid systems to remove 99.99% of particles as small as 0.30 microns from the air stream. They are commonly used in pharmaceutical processing facilities, patient isolation rooms, operating rooms, hospitals, and other similar locations that must meet strict air cleanliness standards. Air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Low-pressure drop

HEPA Ducted Terminal Modules, 99.99% Efficient—Designed for use in ducted supply HVAC installations with T-bar grid ceilings and remove a minimum of 99.99% of particles as small as 0.30 microns from the air stream. They are commonly used in hospitals, operating rooms, patient isolation rooms, surgery recovery rooms, biomedical facilities, pharmaceutical processing plants, laboratories, and other locations that must meet strict air cleanliness standards. Air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Low-pressure drop

Air Filter Rolls

2W186

- UL Classified

General use air filter roll media can be cut to size. Most commonly used as pre-filters to extend the life of more expensive final filters.

Polyester, Blue/White—For use where fiberglass filters are not acceptable or fiber break-off is a concern.

Polyester, Orange/White—Alternative for MERV 8 pleated filters and have a nonmigrating, heavy, dry tackifier on the downstream (orange) side.

Fiberglass, Blue/White—Bulk rolls replace hammock-type filters in furnaces and air conditioners. Progressively denser scrim-backed media (air entry to air exit).

Hog Hair, Blue—Replace odd-size furnace filters. Stiff media fibers for rigidity and durability, and self-supporting with no frame required.

Foam, Black—Can replace disposable filters as a prefilter for higher-efficiency electronic or media cartridge filters. Wash or vacuum to clean.

Air Filter Rolls for Automatic Roll Machines

- UL Classified
- Cores are not interchangeable
- Type AE: American Air Filter units
- Type AE/CB: American Air Filter and Cambridge units
- Type C: Continental Air Filter units

These ready-to-install air filter rolls consist of a long length of filter media on a solid core that can be installed on automatic filter roll machines. When a filter change is needed, the machine automatically advances the correct amount of filter media to replace the existing media. These rolls are most commonly used as pre-filters to extend the life of more expensive final filters.

Pad Holding Frame

Holding Clip

Air Handler®

Air Filter Pad Holding Frames and Clips

Air filter pad holding frames provide support for air filter pads and allow you to just change the filter media in the air filter frame instead of throwing away the entire air filter. Permanent, reusable frames are constructed around a 24-ga. galvanized steel frame. The downstream side is 1" x 1", 16-ga. galvanized welded wire.

Air Handler®

Air Filter Pads

6B735

- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Pads consist of nonpleated filter media that has been cut to a particular size and can be cut down to a smaller size if needed. Commonly used to replace dirty air conditioner filter pads.

Polyester, Blue/White—Offers higher arrestance and dust-holding than most fiberglass filters; won't shed fibers into the air stream.

Fiberglass, Blue/White—For heavy industrial and oily applications.

Air Handler® GFS®

Paint Collector Air Filter Pads

- Can be cut to size

Filter media captures dust and particles in the paint booth's air stream and traps paint overspray to keep it from clogging the booth's fans, ducts, and motors or entering the surrounding air. Constructed of a non-pleated filter media that can be cut to fit a compatible air filter frame. Allows users to replace spent filter media without the expense of replacing the whole filter assembly. They are commonly used in the automotive and manufacturing industries.

Green Masking Paper

- 40-lb. paper weight

Disposable paper helps protect the walls and floors of spray booths and parts of objects being painted from paint overspray. Prevents paint buildup and ensures booths remain clean, free of paint that could be tracked out, and ready for new items to spray.

Air Handler®

Spray Booth Make-Up Air Ring Panel Air Filters

- UL Classified

This 2-ply synthetic media is heat-sealed inside polyester layers, creating a self-gasketing filter with internal metal wire. Unlike standard panel air filters, ring panel air filters don't require clips or latches to seal them in place.

Room Air Cleaners

Feature one or more air-cleaning technologies to reduce or deactivate airborne contaminants and neutralize odors. They have a higher air flow and can clean a larger volume of air per minute than desktop air cleaners, and provide localized air cleaning in classrooms, offices, and other occupied spaces.

Wall-Mount Air Cleaners

Fellowes

Free up floorspace and improve air quality by filtering out dust, lint, smoke, and other contaminants. Have 5 speeds and self-regulating sensors that continuously monitor air quality, room occupancy, and noise levels to provide maximum protection, on demand.

Air Cleaner for Ductless Systems

iWave

Features particle removal and VOC/odor neutralization technology that reduces dust, allergens, and other particles in the air to improve indoor air quality. Does not use filters or bulbs so it requires minimal maintenance.

Maximum Air Flow Capacity	Ion Output	Self-Cleaning	Voltage	Overall Height	Overall Width	Overall Depth	Mfr. Model	Item No.

Industrial-Grade Negative Air Machines

Neutralize odors and remove particles such as dust, lead, mold, and debris from the air in abatement, restoration, construction, and demolition applications. 49K231 and 49K233 add VOC/odor neutralization. For filters and UV bulbs for all air machines, see Grainger.com and search for “negative air machine filters & UV bulbs."

Portable Humidifiers

Add moisture to air in a single room to make the space feel warmer, minimize static shocks, and help prevent wood surfaces from drying out. Suitable for use in offices, homes, and other indoor spaces.

Evaporative Humidifiers—Have an internal fan that draws in air and passes it through a moist wick to increase humidity.

Steam Humidifiers—Use electrodes to create steam and use less water than evaporative humidifiers and bypass humidifiers.

Ultrasonic Humidifiers—Vaporize water and release the vapor into the surrounding air. Create less noise than evaporative humidifiers.

Industrial Dehumidifiers

Durable units provide higher water-removal capacity than office dehumidifiers making them ideal for water-damage remediation jobs and for drying the air in warehouses, storage facilities, museums, and similar large indoor spaces. Metal housing.

60YP50

Compact Industrial Dehumidifiers with Hour Meter

Fit into crawl spaces, basements, other tight areas, and have an hour meter that tracks how long unit is in use on a jobsite for billing purposes. Multiple units can be stacked for more drying capacity. Plastic housing; Wi-Fi and Bluetooth capable. Suitable for water-damage remediation jobs where large amounts of water need to be extracted from the air, floors, and walls.

Stainless Steel Finned Strip Heaters

2XDT9

- 1½"W element
- 5⁄16"W x ½"L slotted holes
- 10-32 screw terminals
- 1⅜"H x 2"W across fins
- Mounting tabs included

Seamless 304 stainless steel tube provides the best combination of physical strength and resistance to high temps. and chemical corrosion. Sheath temp.: 1200°F max. Fins are nickel-plated steel. UL Recognized except 3HM48 and 3HM49.

4TCR6

Cartridge Immersion Heaters

Provide greater heat dissipation in a select area than a tubular immersion heater. For use in heating water and other liquids in platen, plastic mold, die heating, liquid immersion, and air heating applications.

Screw Plug Immersion Heaters

TEMPCO · SUPPLIER DIVERSITY · Vulcan

- NEMA 1 housing, except 4E274 to 4E279

WITH THERMOSTAT

- Control range: copper, 60° to 250°F; steel (Vulcan models), 100° to 550°F; steel (Tempco models), 60° to 250°F

WITHOUT THERMOSTAT

Require external flow switch, low-liquid cutoff switch, over-temp. switch, or other safety device depending on the type of system.

AUTOMATIC RESET

- Control range: 110° to 190°F

Drum Immersion and Bottom-Outlet Heaters

- Single phase

Drum Immersion—Include flange for mounting in 2" bung opening.

Over-the-Side—Feature sludge legs to elevate element off bottom of open container.

Bottom-Outlet—4" metal housing protects heater termination. Ring clamp mounting design with a bronze flange for mounting in a 2⁷⁄₁₆"-dia. hole.

Sanitizing Sink/Tank Immersion—Adjustable stainless steel mounting bracket and 6-ft. cord set with polarized plug included.

TEMPCO

Circulation Heaters and Circulation Booster Heaters

- NEMA 1 housing
- Flanged models have high temp. stainless steel sheath material

Self-contained thermostatically controlled heating units consist of a flanged or screw-plug immersion heater mounted into a tank assembly. Replacement Heater Elements with Gasket can be used as stand-alone heaters.

Vulcan

Industrial Heaters and Elements

Low-Profile Enclosure Heaters—1⅜"H x 2"W finned strip heaters with mounting brackets. 304 stainless steel. UL Recognized.

Finned Tubular Heating Elements—1010 carbon steel sheath with high-temperature, corrosion-resistant finish. Sheath temperature: 800°F max. 2" center-to-center mounting.

- ¾-16 threaded mounting fittings with hardware
- 8-32 screw and nut terminals

High- and Low-Watt-Density Cartridge Heaters

For more cartridge heaters, go to Grainger.com®.

4NKH1

HIGH-WATT-DENSITY

Tempco
- 321 stainless steel sheath tolerates high temps.
- Sheath dia. tolerance: ±0.002"

Vulcan, Thunderbolt™— Operate up to 5 times the watt density of standard cartridge heaters.
- Corrosion-resistant alloy sheath
- Sheath dia. tolerance: +0.000" to -0.004"

LOW-WATT-DENSITY
- Corrosion-resistant 304 stainless steel sheath

Excellent for insertion into dies, molds, and platens.

Tempco
- Sheath dia. tolerance: ±0.002"

Vulcan
- Sheath dia. tolerance: +0.000" to -0.004"

Silicone Rubber and Tubular Enclosure Heaters

Protect enclosures against condensation, humidity, and freezing. Mount heater vertically at the bottom of the enclosure.

Silicone Rubber
- Silicone rubber vulcanized to aluminum mounting plate
- ½"H with mounting flange
- 48" leads
- Mounting holes O.C.: oblong 5/32" x 14"

Tubular
- Corrosion-resistant housing
- 3⅝"H x 1 9/16"W x 8⅜"L
- Mount via perforated holes in housing

Remote Thermostats—Can be placed anywhere in the enclosure and secured with pressure-sensitive adhesive.
- Silicone rubber base and enclosure
- 10A/250VAC, 15A/120VAC
- 48" leads

Pre-Assembled Electric Heating Cables

13R101

Ready for installation and don't require cutting. Cables have either prestripped wires for hardwired connections or a NEMA plug. Self-regulating cables protect pipes, roofs, and gutter systems against damage from freezing or ice buildup. Nonregulating cables commonly install under floors to provide supplemental warmth indoors.

Portable Radiator-Style Electric Office Heaters

Heating element is contained in an oil-filled radiator to provide consistent warmth and to give off residual heat even after the unit is shut off. Heaters use convection-style heating and don't have moving parts, so they operate quietly. Units have tip-over switches and will shut off automatically if knocked over.

Portable Electric Baseboard Heaters

- 120VAC

Units plug into outlets instead of being hardwired to provide warm air wherever it's needed. They use either a finned metal heating element or an oil-filled one and work by convection for spot or supplemental heat. They position along a wall's baseboard in small areas like offices or bedrooms. Integral thermostat included.

Portable Salamander Electric Jobsite & Garage Heaters

Use fan-forced air to provide clean, odor-free tempered heat, which raises the area's temperature by a specified amount. Units heat enclosed spaces. Automatic overheat protection prevents damage to the unit. Heaters also have an option to be used as a fan. Built-in thermostat included.

Wall-Mounting Brackets—Convert salamander heaters for wall- or ceiling-mount with horizontal air flow. Bottom of heater must be at least 6 ft. from the floor.

Field-Installed Cable Kits—Leads are terminated with #10 ring terminals. Cord grip (connector) is included.

786DY0

Portable Infrared Radiant Electric Jobsite & Garage Heaters

Efficiently and quietly warm people and objects without having to bring up the ambient air temperature. Provide spot heating to enclosed and semiprotected areas. Also used to cure a variety of finishes with a lower chance of blistering or overheating than other types of heaters.

Note: Not for use in hazardous or chemical-laden atmospheres, or unprotected wet locations. Heaters should be used outdoors temporarily only.

Multiple heaters may be required to achieve required watts for desired coverage.

Under-Floor Electric Heating Systems

Provide concentrated warmth at ground level. Systems consist of mats with built-in heating coils that are positioned between the subfloor and finished floor. Easy to install and used in renovations or new construction. Compatible with most subfloors. Remote-mounted thermostat required (sold separately).

For Ceramic Tile, Marble, Porcelain, Stone, Carpet, Vinyl Tile—Can be installed under carpet, vinyl, laminate, and glued-down floors with self-leveling cement. Include factory-attached 10-ft. lead wire.

For Laminate, Wood—Suitable for floating and glue-down laminate, wood, and engineered wood floors; no cement required. Include 20-ft. lead wire.

Standard Electric Baseboard Heaters

- Overheat protection

Work by convection and have a heating element encased in a metal sheath surrounded by aluminum fins to transfer heat. Install along baseboards to warm rooms and small spaces in buildings such as multifamily housing or offices. Thermostat required (sold separately).

Residential Grade, Conventional Top—Multiple knockouts at each end. Includes wiring pigtails.

Commercial Grade, Conventional Top—Feature multiple knockouts at each end, wiring pigtails, and installation mounting guides. 3KB39 adds built-in cable clamps.

Commercial Grade, Slope Top—45° slope-top discourages use of heater as a shelf or step. Mount directly to the floor. Carpeting can be brought up to the front of the unit.

Oil-Filled Electric Baseboard Heaters

- White housing
- Floor mount
- Overheat protection

Oil-filled heating element minimizes temperature swings and provides residual heat even after the unit is shut off. Units use convection heating. Install along baseboards to warm rooms and small spaces in buildings such as multifamily housing or offices. Hardwired and require a thermostat to control heat settings, see 3UG32 (sold separately).

Large Programmable Recessed Electric Wall Heaters

- Overheat protection
- Tamper-resistant
- Touchscreen interface

5/2-day programmable thermostat allows users to schedule or hold temperature. Units use fan-forced air to heat residential and light commercial spaces. Included remote control allows users to make temperature adjustments from anywhere in the room.

Large Recessed Electric Wall Heaters with Occupancy Sensor

- Overheat protection
- Programmable
- Tamper-resistant
- Bronze grille color

Occupancy sensor turns up the thermostat to the desired temperature when it detects movement. If no movement is detected, it will set the thermostat back to a preset level to save energy costs. These fan-forced heaters are used in residential and small commercial spaces. Units can be recess- or surface-mounted.

Surface-Mount Electric Ceiling Heaters

Position out of the way to free up limited wall and floor space. Units use fan-forced air to provide spot and supplemental heating to spaces like offices, conference rooms, lobbies, and bathrooms. Automatic thermal cutout shuts off the heater if it overheats and turns it back on when the temperature returns to normal. Thermostat is required.

Surface-Mount Electric Wall Heaters

QMARK Dayton

- Mechanical selector dial

Position near the floor, allowing heat to rise upward to warm the area. Units use convection heating to quietly provide spot and supplemental heating to small spaces.

Surface-Mount Electric Cabinet Wall Heaters

QMARK

- Field convertible with voltage
- 1 or 3 phase

Units are larger than other wall heaters and have a greater capacity to produce warm air in a shorter amount of time. Provide fan-forced heating to spaces like school hallways, churches, and transportation terminals. Can be universally mounted or recess out of the way with required trim kit. Built-in thermostat can be removed and converted to wall-mount.

Drop-In Panel Radiant Electric Ceiling Heaters

Install in 2 ft. x 2 ft. or 2 ft. x 4 ft. drop ceilings. Include built-in T-bar suspension clips for mounting. Can also be recess- or surface-mounted on hard ceiling surfaces with a required mounting frame. Units use radiant heating to quietly spot heat small spaces. Remote wall-mounted line voltage thermostat required.

General Purpose Electric Plenum Heaters

- Fan-forced
- Disconnect switch
- Mechanical Selector Dial, Thermostat

Can be installed for free-air discharge or with a duct system to supplement central heating in hard-to-access or concealed areas, such as between a finished and drop ceiling or a plenum space. Can be rotated on their axis, but must be suspended horizontally and independently supported. Cannot be mounted vertically. Mounting bracket included.

Freeze Protection Electric Plenum Heater

- Thermostat range: 40°F to 90°F

Has a set of normally open (NO) contacts that can send a signal to an optional alarm device that activates if the heater cycles off on its over-temperature safety control. It notifies users before freezing occurs. Unit heats hard-to-access or concealed areas like plenum spaces. Ceiling mounted using included bracket or threaded rod mounting.

Washdown Electric Wall and Ceiling Unit Heaters

QMARK®

- 480VAC
- 3-phase
- Mechanical selector dial

Provide warmth where equipment frequently needs to be washed or hosed off, like wastewater treatment plants, coal handling areas, food processing plants, and car washes. Heaters feature an automatic temperature reset switch, pilot light, and mode selector switch. Corrosion-resistant housing and enclosed internal parts prevent damage. May be mounted on walls or ceilings with a mounting bracket. Heaters use a forced-air heating system.

Wattage Output	Air Temp. Rise	Air Flow	Overall Height	Overall Width	Overall Depth	Mfr. Model	Item No.

Hazardous-Location Suspended Electric Wall and Ceiling Unit Heaters

QMARK®

- 480V
- 3-phase
- 24V contactor
- Class I, Group C and D, Division 1 and 2; Class II, Group E, F and G, Division 1 and 2 rated for use in hazardous locations

Fan-forced heaters suspend from the wall or ceiling and can be mounted horizontally with an optional bracket. They feature an automatic reset thermal limit and disconnect switch, and take up less room than cabinet heaters. Suitable for use in hazardous industrial environments like petroleum chemical treatment and storage facilities. Wall-mount thermostat required.

Note: Required remote thermostat or other control sold separately; see page 3026.

Electric Heater Coil Re-String Kits

Supco®

Repair worn or damaged heating elements in electric heaters if the original replacement elements are no longer available. Kits include heating wire, isolators, and hardware to allow users to replace elements in duct heaters, electric furnaces, air curtains, and strip heaters.

Hazardous-Location Electric Cabinet Wall Heaters

- Class I Div. 1 and 2 Groups B, C, and D
- Min. height from floor: 9" Markel, 8" QMark

Quiet, convection-style heaters used in hazardous industrial environments like petroleum refineries, gasoline storage areas, petrochemical facilities, and dry cleaning plants. Wall mount with included brackets. Thermostat not included.

Note: Required contactors sold separately on page 173. Required thermostats sold separately on page 3026.

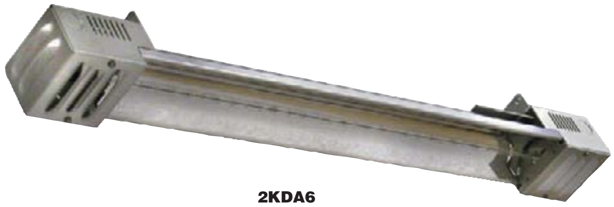
Indoor Suspended Infrared Radiant Electric Ceiling Heaters

Units use infrared radiant heating to quietly warm people and objects, not the ambient air, without taking up floor or wall space. Suspend from the ceiling to spot-heat areas in workshops, garages, and warehouses. May only be used indoors.



2KDA6

Wattage Output	Voltage	Beam Pattern	Overall Length	Overall Width	Overall Depth	Mfr. Model	Item No.
Quartz Lamp, Silver Housing							
900W/1600W	277V AC	60 °	24 in	3 ¾ in	3 ⅜ in	MM-24A	**2KDA6**
3000W/3800W	600V AC	60 °	46 in	3 ¾ in	3 ⅜ in	MM-46A	**2KDA7**

Indoor/Outdoor Suspended Infrared Radiant Electric Wall Heaters

- Beam pattern: 45°

Can withstand rain and are typically used to spot heat spaces like condominium terraces, gazebos, under patio umbrellas, and other low-clearance seating areas. Units use infrared radiant heating to quietly warm people and objects, not the air. Included bracket allows for vertical and horizontal orientation.

Indoor/Outdoor Suspended Infrared Radiant Electric Ceiling Heaters

Quietly heat areas like entrances, patios, and bus shelters. Heaters withstand rain and provide snow and ice control. Can be ceiling- or wall-mounted with either an included or optional bracket. Units may be used with a variable heat controller.

Electric Infrared Heater Selection Guide

DESIRED TEMP. RISE =
Desired comfort temp. - average ambient temp.

WATTS REQUIRED =

For Indoor Spot Heating: Sq. ft. to heat x desired temp. rise

For Indoor Total Area/ Building Heating: Sq. ft. to heat x desired temp. rise x 0.5

For Outdoor Spot Heating: Sq. ft. to heat x desired temp. rise x 2.0

For Outdoor Snow and Ice Control Heating Systems: Sq. ft. to heat x (avg. 85 to 110 watts/sq. ft.)

Note: Multiple heaters may be required to achieve required watts for desired coverage.

HEATING ELEMENTS

Flat Panel Emitters: No glass materials. For indoor spot heating.

Quartz Lamp: For snow and ice control, indoor/outdoor spot heating, and indoor total area heating.

Quartz Tube: For indoor/ outdoor spot heating and indoor total area heating.

Portable Gas Patio Heaters

Provide 360° radiant heat for restaurant, hotel, and retail patios as well as other outdoor locations. Heaters have a wide, angled canopy-style reflector that directs heat downward, keeping people warm at ground level. They can be moved around as heating needs change. Models conceal LP cylinders inside a cabinet in the base.

Direct-Fired Portable Gas Remediation & Tent Heaters

11Z967

- Natural gas/ propane
- Ductable up to 50 ft.

Units raise and maintain the ambient air temperature high enough to kill insects, making them ideal for treating insect infestations. They can also act as a primary source of heat for tented spaces and construction sites. They have an open flame that directly heats the air to heat a space.

Dyna-Glo

Portable Kerosene Radiant Floor Heaters

They efficiently warm small spaces like garages up to 500 sq. ft. Heaters use radiant heating to emit warmth that gets absorbed by people and objects, warming them faster than others that warm the ambient air. They're placed on the floor and can be moved as heating needs change.

Direct-Fired Portable Oil & Kerosene Radiant Torpedo Heaters

Heaters generate radiant heat, which warms people and objects directly instead of heating the ambient air. The air in direct-fired heaters comes in direct contact with an open flame, so there's no heat loss like indirect-fired heaters. Exhaust fumes mix in the air, so these heaters are used to warm well-ventilated enclosed spaces.

Indirect-Fired Portable Oil & Kerosene Torpedo Heaters

- LED diagnostics

Units have a chamber that is isolated from the flame, allowing the exhaust fumes to be vented outside and the heated air to remain clean. They provide the primary source of heat in large spaces like construction sites where the heat can be ducted.

36FK50

In-Floor Vented Gas Heaters

Heaters install in an opening in the floor and provide supplemental heat in drafty areas with limited space. They lower into the floor and mount either parallel or perpendicular to the floor joists. Venting is required. They can be controlled with a unit-installed thermostat or a separate wall thermostat.

Standard-Profile Suspended Gas Wall & Ceiling Unit Heaters

Dayton

- Field convertible combustion
- MNPT connection

Heaters save floorspace when heating large, crowded spaces.

Propeller-Type—These heaters are not to be connected to ductwork.

Blower-Type—May be used with standard adjustable louvers, with short duct runs, or discharge nozzles for spot heating. Good for applications where low sound levels are required.

High-Efficiency Suspended Gas Wall & Ceiling Unit Heaters

NEXUS

- Natural gas, field convertible
- MNPT connection
- Propeller fan

High-efficiency heaters reduce fuel usage and emissions. Heaters automatically regulate their output temperature based on outside air temperature, and they monitor combustion to maintain emissions levels. Units auto-adjust the air/fuel mixture for altitude.

Vented Recessed Gas Wall Heaters

WILLIAMS Comfort Products

EMPIRE Comfort Systems

Heaters release combustion fumes outside of the space being heated to keep the air clean. **Fan Forced** units circulate hot air throughout the space. **Gravity** models use convection heating to create currents that warm and circulate the air, but can also be converted to forced air with an optional blower.

Kickspace Hydronic Heaters

Beacon/Morris

- 115V AC

These units don't take up floorspace, so they can be used for heating crowded or small spaces. Heaters use fan-forced heating to blow warm air out into the room. They install out of the way in the kickplate under cabinets. They may also be converted for in-floor or wall mounting.

Assembled Hydronic Baseboard Heaters

CLASSIC BASEBOARD

- Heater cabinet and element included
- White cabinet and trim

Ready-to-install heaters are placed along the base of the wall where it meets the floor and produce whole-house heating or warm smaller spaces. Heaters feature back panel, support brackets, and element slide cradles.

Note: 5-, 6-, and 8-ft. lengths include joining piece sets. Trim and finishing components sold separately.

Hydronic Baseboard Heater Cabinets & Elements

Beacon/Morris

- Order heater cabinet and element separately
- Beige cabinet and trim

Cabinets cover the heating element and have a sloped top that prevents blocking the louvers, allowing warm air to flow freely. Elements are paired with cabinets and used as part of a custom heater installation. They are suitable for hot water or steam heating systems.

Note: Trim and finishing components sold separately.

Suspended Horizontal Hydronic Wall & Ceiling Unit Heaters

Dayton

Heaters push heated air horizontally and spread it across a larger area than vertical units. Air flow is directed by manually-adjustable louver blades. They are suitable for use in heating warehouses, manufacturing facilities, garages, and other large, open, nonexplosive, noncorrosive areas.

Gas-Fired Whole-House Hot Water & Steam Boilers

Crown Boiler · RBI

These units use natural gas or propane to provide hot water or steam for heating. They are gravity vented and require connection to an exhaust pipe or chimney to release fumes. Boilers provide the primary source of heat throughout a house.

Goodman Air Conditioning & Heating

Whole-House Gas Furnaces

Commonly used to heat multi-family homes and have a 96% or 80% Annual Fuel Utilization Efficiency (AFUE) rating. For use in new installations and to replace existing furnaces of similar BtuH output. Find additional accessories on Grainger.com.

96% AFUE Furnaces—Turn up to 96% of their fuel into usable heat while losing 4% through exhaust. Secondary heat exchanger helps recover lost heat and provides better fuel efficiency. Often used in areas with harsh winters and where local code requires higher-efficiency furnaces.

80% AFUE Furnaces—Turn up to 80% of their fuel into usable heat while losing 20% through exhaust. They have a single heat exchanger.

Condensing Units and Heat Pumps

Factory-installed in-line filter drier.

13 and 14 SEER—Models feature copper tube/aluminum fin coil, brass liquid and suction line valves, and contactor with lug connection.

Heat Pump—Feature a scroll compressor, liquid refrigerant return protection, and service valves with sweat connections and easy-to-access gauge ports. Models are time-initiated and have temperature-terminated defrost control, and contactor with lug connection.

Duct-Mount Humidifiers

Honeywell Home | Aprilaire | White-Rodgers | BestAir Pro

Add moisture to indoor air to make the space feel warmer, minimize static shocks, and help prevent wood surfaces from drying out. For use in office buildings, homes, and warehouses.

Bypass—Allow warm air from a building's furnace to pass over the humidifiers' water tray, and the air absorbs the water.

Fan-Powered—Use a fan to push air across the humidifiers' water tray allowing the air to absorb the water. Add more moisture to indoor air and can fit into smaller spaces than bypass models.

Steam—Have electrodes to create steam and add moisture to air that is moving through the HVAC system. Use less water to humidify the air than fan-powered and bypass models.

Note: Max. Sq. Foot Cap. is an approximation based on 8-ft. ceiling height.

Ductable Dehumidifiers

Honeywell Home | Aprilaire

Dry the air and help prevent mold, mildew, and odors in offices, schools, and other indoor spaces where continual moisture removal is needed. Can operate as a freestanding unit.

Ductable Humidifiers with Fresh-Air Intake—Separate control allows models to pull in fresh air from outside to dissipate stale air and help reduce trapped airborne contaminants in indoor areas.

Honeywell Aprilaire TRION Indoor Air Quality Sun-Pure Catalytic Air Purification Honeywell Home

Media In-Duct Air Cleaners

Filter media neutralizes odors and traps airborne particles in residential or light commercial forced-air heating and cooling systems. For additional replacement air filters, see page 3049.

Particle Removal—Remove airborne contaminants such as smoke, dust, and mold.

Particle Removal and Germicidal Disinfection—Photocatalytic oxidizing (PCO) technology neutralizes stubborn odors, fumes, and toxic chemicals. UV light kills airborne bacteria, viruses, and mold. Helps neutralize NOx and carbon monoxide and is non-ozone generating.

Particle Removal and VOC/Odor Neutralization—Use ionization technology to remove airborne contaminants such as smoke, dust, and mold.

In-Duct Air Cleaners

Units can operate continuously, but they require the HVAC system to be running to move air past the UV-C bulbs, filter media, or the ionization device.

Germicidal UV—Reduce viruses, mold, and bacteria in the air that moves past the UV-C bulbs.

VOC- and Odor-Reducing PCO—Use photocatalytic oxidation (PCO) filter media to neutralize volatile organic compounds (VOCs) and other gaseous pollutants in the air that moves through the air cleaners. Have UV-C bulbs that reduce airborne viruses, mold, and bacteria.

Particle-Removal Ionization—Feature an ion-generating device that neutralizes airborne pollutants and binds ions to dust, allergens, and other airborne particles that pass over the device. Cleaners don't use filters or bulbs, so they require less maintenance than air cleaners that use UV, PCO, or filter media cleaning technology.

DUCTMATE.

Condensing Unit Braces

- Engineered wall-mount bracket for air conditioners, heat pumps, and other equipment
- No site preparation or leveling

No settling. Good for coastal and flood-prone areas or where hurricanes, snowfall, mud, or steep grades are a concern. Mounting fasteners not included.

Note: Because of the wide range of wall materials (brick, concrete, wood, etc.) the mounting is the responsibility of the installer.

AMERIVENT®

Type B Gas Vent Components

- Requires 1" clearance to combustibles
- Snap-lock joints

Gas Vent Pipe Sections—Rugged, double-wall construction with aluminum alloy 1100, 3003, or 3105 inner pipe and corrosion-resistant galvanized steel outer pipe. Snap-lock coupling ends.

Adjustable Gas Vent Pipe—Fit onto standard pipe sections. Telescope adjusts from 3" to 10".

Standard Tees—Branch and trunk diameters are the same size.

Adjustable Gas Vent Elbows, 90°—Constructed of 4 sections for smoother bends and less resistance. Adjusts from 0° to 90°.

Vent Caps—Designed to prevent spill-back of waste gases into structures. Permit termination of vents at minimum height necessary above roof.

Adapters—Universal adapters feature snap-lock couplings on 1 end, and slip joints on other. When used to join 2 UL Listed gas vent systems, the entire system maintains the listing.

Furnace/Water Heater Kits—Kits include cap, storm collar, flashing, draft hood connector, and 12" adjustable length. Most installations require additional pipe lengths and adjustable 90° "L" connector.

- **Firestop Support Plates—**For supporting Type B gas vents starting at appliance level while also serving as a firestop.

Single-Wall Connector Systems

AMERIVENT®

Single-wall flexible vent connector connects one or more appliances to double-wall Type B Gas Vent. Use for listed gas appliances with a draft hood or other gas appliances listed for use with Type B Gas Vent.

Flexible Pipe: 0.012" aluminum alloy 3003. Single wall pipe ends: 0.018" aluminum-zinc coated steel. Rigid components: 0.018" aluminum-zinc coated steel. Clearance: 1" to combustibles. Do not enclose. Do not pass through walls, floors, or ceilings.

Appliance Connector—Sized to fit outlet. Use sheet metal screws for code approved appliance connection.

Universal Adapter—Short slip connection with Ameri-Flex single wall snaplock base.

Vent Pipe Hanger—Provides 1½" spacing (Order same size as pipe diameter).

Reduction Wye—Features branch and/or base with smaller diameter than trunk size. Cap connection for furnace and water heater in common connector.

Flexible Pipe Section—Single wall corrugated aluminum connects from the appliance to Type B Gas Vent. May be compressed 4" per foot to shorten lengths. Cap ends offer snaplock design.

Smoke Emitters

Superior® SMOKE

Rapidly produce dense smoke for leak detection and air-flow analysis. Suitable for HVAC ductwork, exhaust ventilation systems, fire systems, leak testing of boilers, tanks and other enclosures, and air flow testing of chimneys and flues. 3KLJ7 can be daisy-chained for longer smoke production. Use matches or pellets when smaller volume of smoke is needed.

REGIN
REGIN HVAC PRODUCTS, INC.

Smoke Emitters

Produce clean, nontoxic, oil-free smoke to quickly find air-flow leaks in heat exchangers, air ducts, chimneys, tanks, boilers, and piping. Won't stain clothing or building interiors. Contain no explosives. Also used for fire drills and to test smoke alarms/detectors.

GSI A DMI COMPANY

Duct and Fittings

GreenSeam Plus Snap-Lock Pipe is self-sealing duct for commercial and residential applications. Engineered with a LEED qualifying zero-VOC gasket; eliminates additional sealing along the longitudinal seams and transverse joint. When used with GSI sealed fittings, GreenSeam Plus system reduces energy costs and increases overall system efficiency. Each box contains five 5-ft. sections (25-ft. total). Note: Call 1-800-GRAINGER (472-4643) for specialty ordering information.

AMERIVENT®

Chimney Liner Kits

Allow you to easily line a masonry chimney. Aluminum models are suitable for Category 1, gas-fired appliances with B-vent, or appliances with a draft hood. They include a liner, rain cap, flashing, B-vent connector, and mortar sleeve. Pull Downs 40LJ33 and 40LJ39 let you stretch and lead the flexible liner down the chimney.

NORDFAB Ducting

Duct & Fittings

Quick-Fit Pipe—Laser welded seam prevents leakage; rolled edge on ends allows quick connection with Quick-Fit clamps.

Quick-Fit Duct Clamps with Pin—Open and close quickly; provide a tight seal. One connection clamp required to join 2 components.

Quick-Fit Adjustable Nipple—Use to provide variable length adjustment of Quick-Fit ducting system. Black rubber O-ring included.

Quick-Fit Angle Flange—Industry standard flange.

Quick-Fit Angle Flange Adapter—Use for quick connection of Quick-Fit pipe, fittings to flanged pipes or fittings.

Quick-Fit End Cap—Use with Quick-Fit Clamp to cap off an unused ducting port.

NORDFAB Ducting

Duct & Fittings

Quick-Fit Elbow—4"- and 7"-dia. elbows are press formed; others are segmented.

Quick-Fit Manual Blast Gate—Cast aluminum body.

Quick-Fit SD Automatic Blast Gate—Standard 120V control and 75 psi air pressure.

Quick-Fit NFES Automatic Blast Gate—Standard 120V control and 75 psi air pressure. Single cylinder, except 29RP19 to 29RP22 are 2 cylinder.

Quick-Fit Router Hood—Standard opening 6" x 12". Edges are folded to inside for safety.

Quick-Fit Vibration Isolator—Helps keep vibration from passing from the fan to the ducting system.

Quick-Fit Ball Joint—Allows 22° off-center movement. Ideal for machines with moving dust ports.

Quick-Fit Jet Cap—Helps prevent moisture from entering the ductwork.

Quick-Fit HJ Pipe Hanger—Connects directly to ceiling and minimizes pipe movement.

Quick-Fit Butterfly Valve—Standard locking quadrant handle enables user to regulate air volume in clean air applications.

5NKK1

Motorized Hat Channel-Style Dampers

- 100 to 240V
- 50/60 Hz with end switch
- Exhaust or supply
- Mount: horizontal or vertical
- Max. velocity: 3500 fpm

Regulate airflow in medium- and low-pressure commercial applications. TPV louver seals and stainless steel jambs minimize leakage. Channel frames for installations inside walls or ductwork.

Actuator is internally installed. Mill-finish extruded aluminum frame (5" deep x 0.1" thick) and louvers (0.08" thick). Plated steel linkage and pivot pins.

Snap-On Backdraft Damper

These backdraft dampers are low-leakage control dampers for use in systems requiring airflow modulation or control. They feature round, spring-assisted blades that open to allow airflow in only one direction and can be used to release hot exhaust from heating systems without allowing cold air inside. Suitable for use in heating and air conditioning systems.

Duct Dia.	Damper Dia.	Blade Material	Item No.
14 in	13 ¾ in	Galvanized Steel	4JA30

Butterfly Dampers

Corrosion- and chemical-resistant butterfly dampers help to regulate and control the volume of air moving through round PVC duct systems and are ideal for use in harsh environments. Included locking screw helps secure the damper's round blade in position. Dampers resist most acids, aliphatic solutions, bases, halogens, oxidants, and salts making them suitable for use in corrosive fume exhaust applications. Meet ASTM D1784 standard.

Fire Dampers

- UL, NFPA, IBC, MEA, CSFM
- Accommodate airflow in either direction
- Fire-resistance rating: 1½ hr.
- Max. temp.: 165°F
- Curtain blade style (square & rectangular); single-blade (round)
- NFPA 80 requires retaining angles

Dynamic

- Steel spring-assist closing
- Velocity rating: 2,000 fpm
- Pressure rating: 4" wg

Static—For zero-pressure during damper closing. Vertical-mount models close via gravity. Horizontal models have spring-assist closing.

Balancing Dampers

- Galvanized steel
- Pressure rating: 1.0" wg
- Velocity rating: 2000 fpm
- Max. temp.: 180°F

Additional sizes available on Grainger.com®.

Manual—Designed to regulate airflow, but not intended for use where positive shut-off or automatic control is needed. Features manual hand quadrant that can be locked in place.

Remote—Offer the same function as manual balancing dampers with the additional ability to control damper remotely with 48C165 at wall plate or diffuser. Includes factory-mounted 9V actuator. Optional accessories sold separately.

WARNING: utilizing any controller other than 48C165 to adjust damper will void damper warranty.

Flexible Duct

Insulated

- Rated positive pressure: 10" WC per UL 181
- Velocity: 5,000 fpm
- Standard lengths: 25 ft.
- Flame spread/smoke developed: < 25 / < 50
- Rated for indoor use

Recommended operating press.: ¾" WC neg., all dia.; 6" WC pos., all dia. except 4" WC pos. for 14" to 18" dia. Temp. range: uninsulated duct -20° to 180°F; insulated duct -20° to 140°F @ max. press. and -20° to 180°F @ 2" pos. WC max.

Code Compliance—UL 181, NFPA 90A and 90B, ICC, HUD, Cities of Chicago, New York, San Francisco, and County of Dade (Fla.).

Note: Check with the local code body having jurisdiction in your area to determine applicable codes.

UV Exposure—Flexible duct is for indoor use only and should not be installed in direct or indirect sunlight. Installations where sunlight enters through turbine vents, skylights, canopy windows, etc., should be avoided.

Insulated—Feature double-ply vapor barrier with tridirectional reinforcements. All-purpose ducts are gray polyester. Premium ducts are metallized polyester.

Note: R-Values are in accordance with ADC Flexible Duct Performance and Installation Standards (2003) using ASTM C-518 at installed wall thickness on flat insulation only.

Uninsulated—Class 1 air connector is a triple lamination of metallized polyester, aluminum foil, and polyester film, encapsulating a steel wire helix.

Diffusers, Dampers, and Collars

4 WAY Adjustable Diffuser

Diffusers—Round diffusers, with overlapping step-down rings, are compatible with butterfly dampers. Square diffusers provide high-volume air diffusion; multilouver models control air volume. Perforated diffusers have a clean, unbroken-plane look and reduce noise in low-volume air applications.

Diffusers, Adjustable Filtered—Separate directional diffusers on 4 sides, to provide air flow control. Compatible with T-bar ceilings. Connect duct to back pan and snap closed. Back pan and electrostatic filter included.

Butterfly Dampers—Adjust through center hole in diffuser; removable handle included.

High-Temperature Sidewall Power Venters

115V. Mechanically vent Category 1 heaters through a wall, eliminating the need for a traditional chimney. Include UC1 heater interlock control and fan proving switch. Interlock with any 24/120VAC burner circuit. Feature adjustable pre/post purge, LED status indicators, and fault code memory. Vent hood 4C845 is recommended for power venters 4KA72 and 4KA73.

Ideal for sidewall vent furnaces, boilers, water heaters, pool heaters, and unit heaters. Use for electric to gas conversions, heating equipment upgrades, new construction, and replacing chimneys.

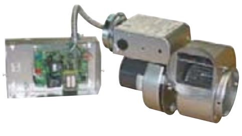
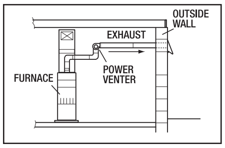
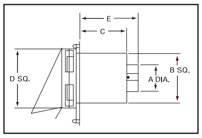
TJERNLUND





TJERNLUND

High-Temperature Vent Hoods



Designed to efficiently terminate horizontal vent runs handling flue gases from furnaces, unit heaters, and boilers. Made of 18-ga. corrosion-resistant aluminum alloy. 4C845 has built-in heat shield which provides clearance from combustible material contained in walls. Can be used with sidewall power venters, this page.

Water Heater Vent Packages

TJERNLUND

Used to vent millivolt gas water heaters up to 75 ft. away from a sidewall. Upgrade water heaters from electric to gas in renovations or new construction where no chimney exists. Wired with 25-ft. control cable. Linear limit spill switch connects to thermocouple junction adapter to lock out heater if draft is insufficient. Inlet and outlet are 3" on 5C083, 4" on 2FRU6. Post-purge timer keeps unit operating at end of burner cycle. Gas diaphragm switch with aluminum tube connection turns unit on and off with gas flow to water heater. Heavy-duty vent hood and 6-ft. power cord. CSA Certified.

Compatible w/Gas Waters Heater from 60,000 to 120,000 Btu; 115V, 1.26-Amp Motor	VP-3F	**2FRU6**
Compatible w/Gas Water Heaters Up to 60,000 Btu; 115V, 1-Amp Motor	VP-2F	**5C083**

Rooftop Inducers

TJERNLUND

- Powder-coated clamshell housing allows easy installation, inspection, and service
- Stainless steel blower wheel

Ideal solution for inaccessible and short-length vent connectors and chimneys, and for noise-sensitive locations. Optional rooftop stand supports weight of the inducer for metal chimney installations. Rooftop mounting maintains negative pressure throughout the entire vent system. ETL Listed to UL 378, UL 705, and CAN/CSA B255-M81.

Gas/Oil Applications, 5PWD8 and 5PWD9—Use to exhaust clothes dryer vents and exhaust chases serving multiple floors/sources. Pair with Controller 35UP43 for demand-based automatic speed control (sold separately on Grainger.com®). Also rated for use with non-condensing oil and gas heating equipment when installed with either 4KA76 (sold separately on Grainger.com®) or Interlock Controls 5PWE2 (sold separately, this page).

Solid Fuel Applications, Nos. 5PWE0 and 5PWE1—Use to increase fireplace draft to help eliminate fire starting and smoky backup problems. Included mounting kit attaches to both tile-lined and metal flues. Also includes wall-mount speed control.

		2,500,000-2,700,000	3,500,000-3,700,000	50

**Select inducer based on the BTU/hr. input of appliance rather than diameter of appliance vent outlet or chimney. **To determine equivalent ft., add the total length of straight vent pipe plus 10 ft. for each 90º elbow and 5 ft. for each 45º elbow.*

Item No.	Max. Face Area of Fireplace†
Solid Fuel Fireplaces	
5PWE0	14 sq. ft.
5PWE1	28 sq. ft.

† Determine vertical and horizontal face opening of hearth in sq. ft. (If open on sides or back, total all openings.)

TJERNLUND

In-Line Centrifugal Fan Duct Booster

- Max. operating air temp.: 200°F; not for use with combustion exhaust
- Motor shaft should remain horizontal to the floor; mount on bottom of horizontal or side of vertical duct

Booster fits in round, square, or flat ducts as shallow as 3¼" deep. One 4" x 7" cutout is required. Unit attaches to ductwork with 4 sheet metal screws. May be actuated by 5C968 pressure switch. Steel housing and wheel. 1/70 HP, 1550 rpm, 115V, 60 Hz permanently lubricated motor is positioned out of the air stream. UL Listed.

Note: cfm rating is for 8" dia. pipe. Air flow will decrease slightly with smaller pipe.

4C730

In-Line Draft Inducers

TJERNLUND

Increase draft for gas- and oil-fired heating equipment. Variable draft control. Aluminized steel housing and wheel. 115V, 60 Hz. Use for long, horizontal vent connectors, undersized chimneys, and structures with a slight negative pressure. Fastening band included, except bandless screw attachment on Nos. 4C730 and 4C731.

Note: The performance table shows typical capacities when inducer is mounted on pipe sizes shown. Heating capacities shown are for 1000 Btu per cu. ft. of natural gas and for 139,000 Btu per gal. of #2 fuel oil.

INTERLOCK CONTROLS

To comply with national mechanical codes, draft inducer must be interlocked with heater it serves.

Fan Proving Switch—Monitors pressure within the inducer housing. Required with 4C730 and 4C731 for CSA certification.

Universal Interlock Control—Provides heater interlock with any 24/120VAC burner circuit. Features adjustable pre/post purge, LED status indicators, and fault code memory.

In-Line Axial Fan Duct Boosters

TJERNLUND

- 115V, 60 Hz

Designed for powered air intake and exhaust systems, or to boost air flow in hard-to-heat or -cool areas. Galvanized steel housing with built-in duct stop on the inlet and crimped edge on the outlet. Optional speed control 48C172 (sold separately on Grainger.com) can be used on 6", 8", and 10" units only.

Fits Duct Dia.	CFM @ 0.000" SP	Max. Amps	Max. Inlet Temp.	Mounting Position	L	Mfr. Model	Item No.
6 in	180	0.4 A	150°F	Horizontal or Vertical	6 1⁄2 in	EF-6	5C963

14 in	1200	1.7 A			14 1⁄2 in	EF-14	5C967
Duct Pressure Switch, Operates Between 24 and 277VAC, 15-Amp Rating						PS1503	5C968

AMCA Certification Information

AIR PERFORMANCE

Dayton Electric Mfg. Co., Fantech, Inc., Vosterman's Ventilation, Inc., Soler & Palau, and Berner International certify that each of their respective models displaying the AMCA Seal in the HVAC section are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

SOUND & AIR PERFORMANCE

Dayton Electric Mfg. Co. & Broan-NuTone LLC certify that each of their respective models displaying the AMCA Seal in the HVAC section are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program.

WATER PENETRATION & AIR PERFORMANCE

Dayton Electric Mfg. Co. certifies that the louvers shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings Seal applies to Air Performance and Water Penetration ratings.

Exhaust Ventilation

Determining the correct exhaust CFM is one of the most critical application calculations, as it allows the ventilation system to perform as designed.

Commercial kitchen exhaust systems, in particular—with temperatures as high as 300°F and grease-laden atmospheres—must be designed to meet restaurant and food service application requirements.

Owners and installers must be aware of the following guidelines and governing codes when designing a kitchen ventilation system:

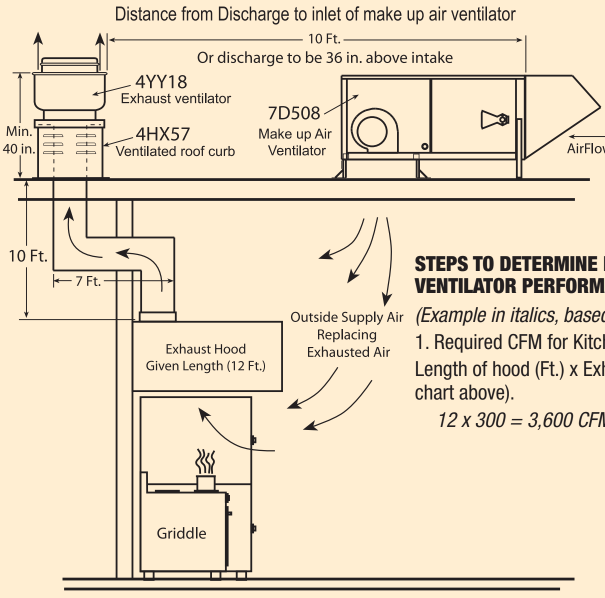
Types of Kitchen Equipment	Non-Grease Hoods	Grease Hoods			
	Gas/Electric Steamer Gas/Electric Oven Food Warmers Pasta Cooker Dishwasher	Smoker Rotisserie Pizza Oven	Combi-Ovens Gas/Electric Fryers Griddles Tilting Skillets Tilting Braising Pans Grill/Hibachi Grill Salamander	Upright Broiler Electric Char-Broiler	Gas Char-Broiler Mesquite Infrared Broiler Lava Rock Char-Broiler Wok Chain Broiler
*Exhaust Rate (Approx. CFM/ Linear Ft.)	200	250	300	400	550
Internal Resistance (Approx. Static Pressure)	0.5	0.5	0.625	0.75	1.00

***For specific hood types, refer to the International Mechanical Code.**

INSTALLATION

UL 762

Concerns the safety of roof- or wall-mounted power ventilators used with restaurant exhaust appliances, where heat/grease are typically encountered in the airstream.



NFPA 96

- Discharge must be a minimum of 40" from roof deck
- Ductwork must be a minimum of 18" above roof deck
- Curb must be vented and have a grease trap and hinge kit
- No damper can be used in a kitchen application (unless part of the hood)

STEPS TO DETERMINE REQUIRED EXHAUST VENTILATOR PERFORMANCE

(Example in italics, based on application drawing)

1. Required CFM for Kitchen Hood = __________

Length of hood (Ft.) x Exhaust rate (CFM/Linear Ft.) (Use chart above).

12 x 300 = 3,600 CFM

2. External Resistance (SP) = a. + b.

0.05 + 0.16 = 0.21

a. Duct Length (Ft.) = __________

Duct Length (Ft.) = 17

0.002 - 0.004 = Duct Resistance Factor (DRF), assuming air velocity is between 1000 and 1800 FPM

Duct Length x DRF = External Resistance (SP)

17 x 0.003 = 0.051 (SP)

b. Number of Elbows = __________

Number of Elbows = 2

0.080 = Resistance Factor Per Fitting, Elbow, etc.

Number of Elbows x 0.08 = Additional Duct Resistance (SP)

2 x 0.08 = 0.16 (SP)

3. Internal Resistance (SP) (Use chart above) + External Resistance (SP) = Total Resistance (SP)

0.625 (SP) + 0.21 (SP) = 0.836 (SP)

Exhaust Ventilation Performance =

3600 CFM @ 0.836 (SP)

Air Changes Recommended for Various Areas

To determine Air Volume (cfm), calculate volume of area (LxWxH) to be ventilated in cubic feet and divide by minutes per change (see table). Result will be cubic feet per minute, corresponding to fan ratings. One or more fans may be used to obtain desired cubic feet per minute.

Ventilated Area	Minutes Per Change	Ventilated Area	Minutes Per Change	Ventilated Area	Minutes Per Change	Ventilated Area	Minutes Per Change
Assembly Halls	3-10	Factories	4-10	Offices	5-12	Shops	5-10
Bakeries	1-3	Foundries	2-8	Packing Houses	3-5	Stores	5-10
Boiler Rooms	1-3	Garages	5-10	Plating Rooms	1-5	Theaters	3-8
Cafeterias	3-5	Kitchens	1-5	Printing Shops	5-10	Toilets	2-5
Churches	2-4	Laundries	1-3	Restaurants	3-10	Transformer Rooms	1-5
Clubs	5-7	Libraries	2-4	Restrooms	5-10	Warehouses	5-10
Dormitories	5-8	Locker Rooms	4-15	Sales Rooms	2-10		
Engine Rooms	2-5	Mills	5-8	Schools	5-10		

Connecting with Grainger

Website: To register, sign in at Grainger.com®.

Phone: 1-800-GRAINGER (472-4643).

Mobile App: Download at the App Store or Google Play.

Branch: See Grainger.com for your nearest branch.

After-Hours Emergency Service Call:
1-800-CALL-WWG (1-800-225-5994).
If you are a Grainger account holder* and need a product immediately, even after business hours, call us and we'll open your local branch (available in most markets and a $50 fee may apply).

*We can establish a new account for business customers at the time of the emergency call if you do not have an account with us.

Terms of Sale

SUMMARY TERMS & CONDITIONS

Terms: The term "Customer" includes business customers ("Business Customers") as well as individuals, and the term Business Customers includes, but is not limited to, governmental, institutional, and educational customers. By placing an order, Customers accept and agree to Grainger's Terms of Sale, the full text of which can be found at Grainger.com and are incorporated herein by reference. The Terms of Sale contain a provision that any disputes will be resolved on an individual basis through arbitration. Grainger reserves the right to: (i) revise the Terms of Sale as found on Grainger.com at any time; (ii) accept or reject any order; (iii) limit the quantity of items purchased per order; and (iv) limit the number of orders that can be placed per day. Grainger does not guarantee the availability of specific quantities of any product listed in this Catalog at time of order placement.
Prices: "Web Prices" displayed on Grainger.com: (i) are offered to Customers that do not have other pricing arrangements with Grainger; (ii) are subject to the Terms of Sale on Grainger.com; (iii) are available for orders placed on Grainger.com, by phone, or at Grainger branch locations; (iv) do not include freight, handling fees, taxes, and/or duties; and (v) are subject to change or correction at any time and without notice. Business Customers that have other pricing arrangements with Grainger can view their prices and the applicable prices to which discounts, if any, are applied, when logged into their Grainger.com account. Export orders may be subject to other special pricing.
Sales Tax: Customers are responsible for payment of all applicable taxes, or providing a valid sales tax exemption certificate.
Shipping Charges: All Products are shipped F.O.B. shipping point with all costs imposed by the carrier related to the shipment paid by Grainger and charged to Customer on Customer's invoice. Receipts for freight charges will not be furnished. C.O.D. shipments are not permitted. Fuel surcharges and other surcharges may be applied. Title and risk of loss pass to Customer upon tender of the shipment to carrier.
Payment Terms: Grainger accepts cash, checks, money orders, Visa, MasterCard, Discover, and American Express. For business customers with established Grainger credit, payment terms are net 30 days from the date of shipment or pick-up. If payment is not received within the 30-day period, Grainger may defer or cancel all or part of any shipment or order. Anticipation and cash discounts are not allowed.
Product Returns: For Grainger's current product return policy and instructions, go to grainger.com/returns. Grainger does not take title to returned products until the item is received by Grainger at the applicable return location. Proof of purchase is required in all cases. Product returns may be denied or made subject to restocking fees and other charges by Grainger.
Product Substitution: Products and/or country of origin may be substituted and may not be identical to descriptions and/or images in this Catalog or on Grainger.com.
Other Products and Services: Orders for export and products and services not listed in this Catalog are subject to separate terms and conditions; see Grainger.com.

CATALOG PRODUCT INFORMATION

Information about the products in the Grainger catalog is provided by the manufacturer and/or supplier. Every attempt is made to publish complete and accurate data but, because changes happen continuously, the timeliness and accuracy of information cannot be guaranteed. Grainger reserves the right to revise publishing errors in its catalogs or websites.

SATISFACTION GUARANTEE TO ALL CUSTOMERS

Customer should contact Grainger if not satisfied with a product for any reason. Grainger will promptly provide an exchange or refund if the product is returned within 30 days of invoice with proof of purchase from Grainger.

GRAINGER LIMITED WARRANTY

ALL PRODUCTS SOLD TO CUSTOMERS ARE WARRANTED BY GRAINGER ONLY FOR USE IN: (i) RESALE; OR (ii) BUSINESS OR GOVERNMENT. GRAINGER WARRANTS PRODUCTS AGAINST DEFECTS IN WORKMANSHIP OR MATERIALS UNDER NORMAL USE FOR ONE (1) YEAR AFTER DATE OF INVOICE FROM GRAINGER, UNLESS OTHERWISE STATED. AT GRAINGER'S OPTION, THE EXCLUSIVE REMEDY FOR ANY PRODUCT IT DETERMINES TO BE DEFECTIVE IN WORKMANSHIP OR MATERIALS WILL BE REPAIR, REPLACEMENT OR REFUND OF THE PURCHASE PRICE.

WARRANTY DISCLAIMER & LIMITATIONS OF LIABILITY

a. WARRANTY DISCLAIMER. EXCEPT AS SET FORTH HEREIN AND WHERE PERMITTED, NO WARRANTY OR AFFIRMATION OF FACT OR DESCRIPTION, EXPRESS OR IMPLIED, IS MADE OR AUTHORIZED BY GRAINGER. GRAINGER DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. GRAINGER ALSO DISCLAIMS ANY LIABILITY FOR CLAIMS ARISING OUT OF PRODUCT MISUSE, IMPROPER PRODUCT SELECTION, IMPROPER INSTALLATION, PRODUCT MODIFICATION, MISREPAIR OR MISAPPLICATION.

b. LIMITATIONS OF LIABILITY. ANY LIABILITY FOR CONSEQUENTIAL, INCIDENTAL, SPECIAL, EXEMPLARY, OR PUNITIVE DAMAGES IS EXPRESSLY DISCLAIMED TO THE EXTENT PERMISSIBLE. FOR BUSINESS CUSTOMERS, GRAINGER'S LIABILITY IN ALL EVENTS IS LIMITED TO THE PURCHASE PRICE PAID FOR THE PRODUCT THAT GIVES RISE TO ANY LIABILITY. CERTAIN STATE LAWS DO NOT ALLOW LIMITATIONS ON IMPLIED WARRANTIES OR THE EXCLUSION OR LIMITATION OF CERTAIN DAMAGES. IF THESE LAWS APPLY, SOME OR ALL OF THE ABOVE DISCLAIMERS, EXCLUSIONS, OR LIMITATIONS MAY NOT APPLY AND OTHER RIGHTS MAY BE AVAILABLE.

COMPLIANCE AND PRODUCT INFORMATION

Product information and Safety Data Sheets ("SDS") are supplied by the manufacturers. GRAINGER MAKES NO WARRANTIES AND EXPRESSLY DISCLAIMS ALL LIABILITY FOR ACCURACY OF THE PRODUCT INFORMATION OR ANY SDS.
To Request an SDS: Log on to Grainger.com and click on the "View the Safety Data Sheet" (SDS) for this item, email product.compliance@Grainger.com, or write to:
Grainger, Dept. B1L57, 100 Grainger Parkway, Lake Forest, IL 60045, U.S.A.
Refrigerant Customers: In accordance with the Federal Clean Air Act, sale of Class 1 (CFC) and Class 2 (HCFC) refrigerant will be restricted to resale purchases and/or to certified professional service technicians. To purchase regulated refrigerant products, all customers must present a certification card or sign a statement of resale to complete the purchase.
Product Compliance and Suitability: Grainger does not guarantee compliance or suitability of the products it sells with any laws, codes or regulations, nor does Grainger accept responsibility for construction, installation, and/or use of a product. Customer is solely responsible for reliance on or use of any product information, and for use or application of any product.
Availability: Certain products may not be available for sale in all areas.
Energy and Water Efficiency Information: For identification of products and related information, go to Grainger.com.
Purchasers of Products Used with or for Potable Water: The Federal Safe Drinking Water Act and regulations in CA, LA, MD, and VT prohibit plumbing products (including, but not limited to pipes, pipe fittings, solder, flux, plumbing fitting, etc.) used to convey water for human consumption that are not "lead free," as defined by the regulations. To determine your state's standards applicable to the products you purchase for use in or for potable water applications, direct your inquiries to the appropriate regulatory agency in your state. To determine the federal standards applicable to the products you purchase for use in or for potable water applications, visit http://water.epa.gov/drink/info/lead/index.cfm. For identification of products impacted by these regulations, go to Grainger.com.

California Proposition 65: California Proposition 65 is a regulatory notice requirement that entitles California consumers to special warnings for any one of the over 800-listed chemicals that California regulators have deemed to expose consumers to cancer or reproductive harm if consumers are exposed to those chemicals above certain threshold levels. The required warnings are as follows:

WARNING: Certain products in this catalog can expose you to chemicals which are known to the State of California to cause birth defects or other reproductive harm. For more information go to www.p65warnings.ca.gov.

WARNING: Certain products in this catalog can expose you to chemicals which are known to the State of California to cause cancer. For more information go to www.p65warnings.ca.gov.

If you have questions about whether any product that you are interested in ordering falls under California Proposition 65's warning requirements, please visit our website at Grainger.com with reference to that product. Similarly, if you have any questions about Proposition 65 itself, please visit www.p65warnings.ca.gov or the California regulatory agency website at www.oehha.ca.gov.
